

Introduction

This latest edition of the GE product catalog has been updated to help you more easily select the GE lighting products that best meet your needs.

Technical data in this catalog (life, lumens, wattage, etc.) are nominal values, subject to manufacturer's tolerances. All technical data in this catalog is based on laboratory tests conducted under controlled conditions. Performance of individual lamps may vary. Because of frequent design improvements, the values listed may not be current ratings. The data and suggested applications should not be taken as representations or warranties as to the suitability of any product for a particular application. Technical bulletins may be issued from time to time if changes in ratings occur prior to the next catalog printing.

Introduction

GE
Lighting

Leading the way to environmental excellence

Learn how these top 3 environmental impacts affect your business

Today, with so much environmental data in the market place, it's hard to differentiate which imperatives positively affect your business. For instance, a longer lamp life may be environmentally preferable compared to shorter life lamps.

GE is focused on today's most pressing environmental challenges, such as energy efficiency, longer life products and lamp recycling.

Energy Efficiency

Increasing the energy efficiency of the lighting system has a large effect on reducing the overall environmental impact and reduces energy bills.

Reduction of greenhouse gas emissions and energy use is important to business. GE offers you energy efficient systems to reduce your energy consumption and subsequently your GHG emissions.

To learn how to reduce energy costs by using GE products, go to www.gelighting.com/environmental

Long Life

Increasing lamp life and therefore reducing the number of lamps made, transported and recycled, also has a large effect on reducing environmental impact.

To view GE's large range of long life and energy efficient products, go to www.gelighting.com and click on "Products."

Recycling

GE recommends recycling fluorescent lamps at the end of life. Recycling recovers lamp materials, including mercury, for reuse.

To learn more about GE's recycling resources, go to www.gelighting.com/environmental

Ballasts

EcomaginationSM is GE's commitment to create products that help our customers improve their environmental and operating performance. GE's UltraStart[®] T5 and T8 programmed start and GE UltraMax[®] Instant Start ballasts are among the highest energy-efficient ballasts available and contribute to significant reductions in energy consumption and the curbing of greenhouse gas emissions.

Conformance Directive

The restriction of Hazardous Substances (RoHS) is a European directive that restricts six hazardous materials in consumer products:

- Lead
- Mercury
- Cadmium
- Hexavalent chromium
- PBB flame retardants
- PBDE flame retardants

GE electronic ballast options meet the material restriction requirements of RoHS relating to those substances.

UltraMax[®] Professional Series

Introducing our premium, highest efficiency Instant Start ballasts. The P series is comprised of new micro cans that are the smallest in the industry and allow for lightweight retrofits and compact design. The new P series will effectively remote start energy efficient lamps up to 18 feet and have improved UL Type CC anti-arcing protection and double the surge protection for the high ballast factor category.

UltraStart[®] Electronic Ballast

UltraStart[®] ballasts are a family of high-efficiency GE Program Start (see page 10-2) electronic linear fluorescent ballasts designed to optimize GE's T8 and T5 Ultra lamps in frequently switched applications. Instant Start ballasts provide approximately 10,000 starts before 50% of lamp failure. UltraStart[®] provides greater than 100,000 starts. UltraStart[®] have the equivalent energy savings and convenience of instant start ballasts but with the long lamp life of a programmed start ballast. UltraStart[®] T8 L, N and H ballasts exceed 90% efficiency and the NEMA Premium[®] ballast program minimum efficiency requirements.

UltraMax[®] General Series

Offering more than 90 percent energy efficiency, the UltraMax[®] G series electronic ballast is designed for all-purpose, long-burn operations. Focusing on the needs of our customers, we've constructed these high-efficiency ballasts to offer cutting-edge technologies for low temperature starting and anti-striation control. With an ambient temperature rating of 104°F, the UltraMax[®] G series is ideal for general applications.

Introduction

UltraMax® T8 Electronic Ballast

UltraStart® T8 Electronic Ballast

Compact Fluorescent Lamp (CFL)

CFLs are single-ended T4 and T5 lamps that are bent to form a compact shape. Screw-in CFLs have an integral ballast with a screw base for easy replacement of incandescent lamps. GE offers multi-voltage, multi-lamp and multi-entry ballasts for a wide range of CFL plug-in lamps. Multivolt ProLine® CFL ballasts are designed for plug-in lamps so that a ballast will survive over the useful life of approximately 3-to-4 lamp lives.

Multivolt ProLine® CFL Ballast

Electromagnetic Ballast (Magnetic Ballast)

Primarily used for T12 lamps. These ballasts operate lamps at a less efficient 60Hz and typically have efficiencies of 70-80%. Most ballasts consist of a core and coil transformer assembly. Today, magnetic ballasts for 4 foot and 8 foot lamps are typically used only for replacement purposes and are restricted by EPACKT to be sold, even in replacement applications, starting in 2009.

Sign Ballast

Sign Ballast (Magnetic Ballast)

Designed to operate T12 HO Lamps at 120 volts in cold and damp conditions in sign cabinets.

GE eHID, Electronic High Intensity Discharge Ballast (eHID)

Electronic HID significantly improves the performance of HID lighting. GE's UltraMax® eHID ballast operates pulse start and ceramic metal halide lamps.

HID Electromagnetic Ballast Kit

GE High Intensity Discharge Ballast (HID)

HID magnetic ballasts consist of robust core and coil designs that meet or exceed minimum ANSI requirements. These ballasts are typically sold as distributor replacement kits which are pre-wired with a capacitor, ignitor (if applicable) and all necessary mounting hardware and instructions. Each wattage is typically offered in quad (MLT-120/208/240/277 volt), 5-tap (ML5-120/208/240/277/480 volt) or 480 volt (48T) options.

UltraMax® eHID Ballast

GE Lighting & Electrical Institute

- World renowned training and education center at historic Nela Park in Cleveland, Ohio
- Impressive full-scale lighting demonstrations plus comprehensive electrical distribution solution center
- Variety of scheduled courses offered throughout the year, taught by experienced industry professionals

Call **1-800-255-1200**

or visit www.gelighting.com/institute

E-tools from the Institute:

- Live webcasts to sharpen your product and application knowledge
- Value*Light – GE's award-winning cost of light analysis program
- The Lighting Toolkit – a collection of seven simple estimating tools including a Simple Energy Calculator, Lighting Layout Estimator, and the Watts Per Square Foot Estimator
- The Lighting Assistant – a set of over 30 user-friendly tools and additional resources
- Light Beams – a comprehensive beam rendering and design tool for GE's PAR, R, MR and other directional lamps
- Plus training on online lighting layout tools and audit tools.

Learning Central...

the GE portal for all of your training and education needs!

Use Learning Central to register for Institute courses, enroll in online courses, schedule a customized onsite conference, track your progress, and more!

Bulb Identification

DIA: Diameter of bulb at widest point.

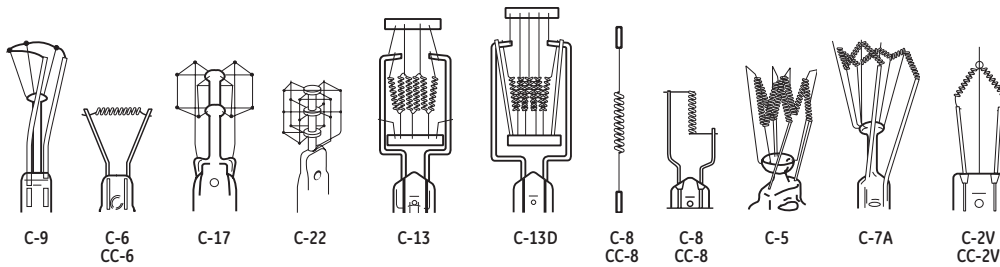

MOL: Maximum Overall Length including base or pins.

LCL: Distance between the center of the arc tube and the Light Center Length reference plane.

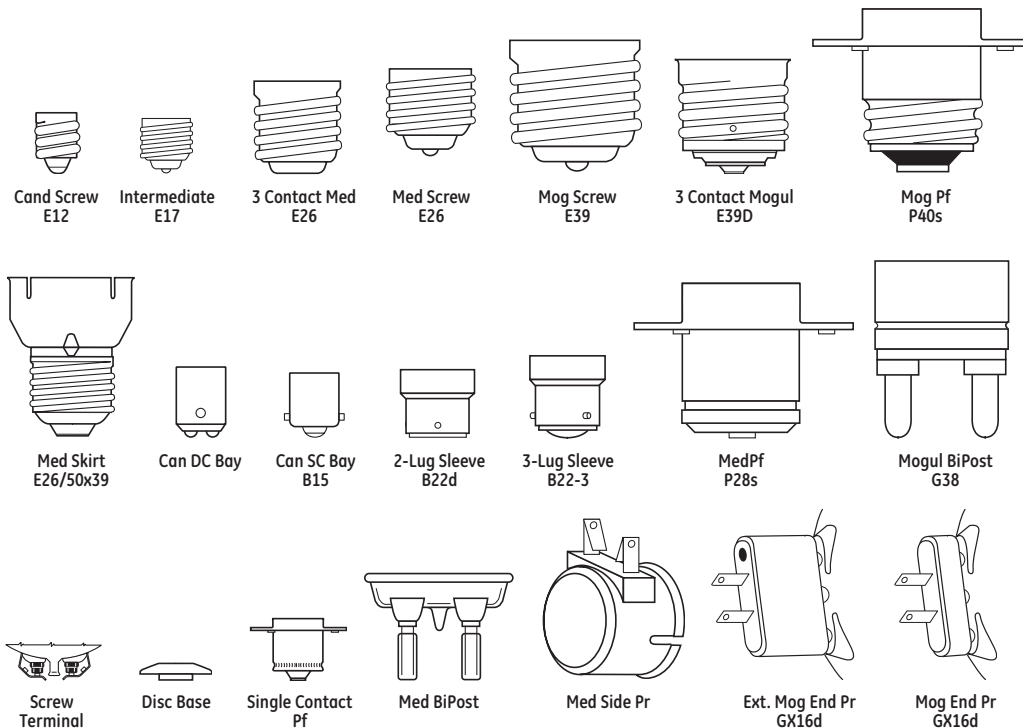

Note: Lamp drawings are not drawn to scale. Be sure to check size and dimension information when identifying each lamp.

To convert inches to millimeters, multiply the dimension (in inches) by 25.4 (i.e. 1.5" x 25.4 = 38.1 mm).

Incandescent Lamps

Introduction

GE's incandescent lamps trace their ancestry to the world's first practical electric bulb, invented by Thomas Alva Edison, founder in 1879 of the company that became General Electric Company.

More than a century of research and development later, the present range of GE incandescent lamps represents the state of the art of lamps for residential and commercial use, as well as special purpose lamps for decorative or display applications.

In an incandescent lamp, light is generated by heating the filament to incandescence. The hotter the filament, the more efficient it is in converting electricity to light. However, when the filament operates hotter, its life is shortened so the design of each lamp is a balance between efficiency and life. This is why lamps of equal wattage may have different lumen ratings and different life ratings.

Incandescent lamps of similar size are commonly available with different wattage ratings. The fixture wattage limit should not be exceeded.

Protection From Moisture

When Hard Glass appears in the Additional Information column, the outer bulbs are made of special thermal-shock-resistant glass. Sometimes external protection of the lamps is also needed to eliminate the chance of bulb breakage due to contact with water during operation. Footnotes will indicate when external protection is needed. Where Hard Glass is not indicated, the bulb glass is such that the lamps require protection from exposure to mist or condensation as well as direct contact with water during operation.

Rated Life

Values are based on a large number of representative lamps under controlled conditions. Individual lamps or groups of lamps will vary from the Rated Life shown. Rated Life is a median value of life expectancy – the total operating time at which under normal conditions 50% of any large group of initially installed lamps are expected to be still burning.

Incandescent Brand Name Cross-Reference

ATTENTION: This brand-name cross-reference chart is provided only as a quick reference. Other lamp company brand listings may only represent a near equivalent, versus an identical match to GE brands. Individual lamp manufacturers' product offerings and performance specifications are subject to change at any time without notice. Lamp performance may be affected by environmental conditions, and/or auxiliary equipment.

Reveal®
A-line

GE Reveal® Light Bulbs

Superior light quality over regular incandescent that:

- Produces “clean, beautiful light®” for more vibrant colors
- Contains Neodymium glass that filters out dull yellow rays
- Is available in 40-150 watt A-Line
- Also available for nearly every application from candle shapes to flood lights
- A color-enhanced full-spectrum light bulb

GE Rough Service A-Line Bulbs

Built to last, even under many “rough” service conditions...

- Extra filament support design protects against early burnouts caused by bumps, jars and vibration
- Longer life
- Dual Voltage Rating (120V/130V) provides application flexibility
- Saf-T-Gard® coating available – coating is shatter and weather-resistant; resists breakage from heat and thermal shock that can occur from water, sleet, snow, molten solder and weld spatter

GE Long Life Floodlight or Spotlight

- 25% longer life than standard reflectors. Ideal for use in high ceilings and hard-to-reach track lighting
- Easy replacement – same length and width as standard R bulbs
- Some lumen loss from standard reflectors (see listing for lumen values)
- Available in 45W floodlight and 65W floodlight and spotlight

Uses:

- Down lighting, display lighting, accent lighting, wall washing
- Wherever standard reflector bulbs are used

Spotlight

Incandescent Lamps

Headings in this catalog section

The following terms and descriptions can help you when checking Incandescent lamp specifications and when ordering products.

Within this product line, lamps are divided by wattage. Within wattage, lamps are listed alphabetically by bulb shape.

| Bulb Shape | Base | Watts | Order Code | Description | Volts | Case Qty | Filament Design | MOL (in) | LCL (in) | Rated Life (hrs) | Rated Life (yrs*) | Lumens Initial | Color Temp K | CBCP | Annual Operating Costs** | Warning and Caution Notices | Additional Information |
|---------------------------|------|-------|------------|-----------------|-------|----------|-----------------|----------|----------|------------------|-------------------|----------------|--------------|------|--------------------------|-----------------------------|------------------------|
| Incandescent Lamps | | | | | | | | | | | | | | | | | |
| 3 Watts | | | | | | | | | | | | | | | | | |
| S6 | Cand | 3 | 11098 | 75R30/FL/65WM/A | 130 | 24 | C-7A | 1.87 | 1.37 | 3000 | 11 | | | | | | Clear-Indicator |

75 R30 / FL / 65WM / A

Identifies the lamp's wattage.

Identifies the lamp's shape.

Identifies the lamp as a floodlight.

Identifies the lamp as a Watt-Miser®

Identifies this lamp as amber colored.

WHEN YOU DON'T KNOW THE LAMP DESCRIPTION

1. Identify the lamp wattage.
2. Measure bulb diameter using ruler in appendix section page D-1 to determine width in eighths of an inch.
3. Identify base type using table on page 1-2.
4. Find your lamp in the table containing the bulb wattage, then match the shape, size and base, which are all listed alphabetically.

| Bulb Shape | Base | Watts | Order Code | Description | Volts | Case Qty | Filament Design | MOL (in) | LCL (in) | Rated Life (hrs) | Rated Life (yrs*) | Lumens Initial | Color Temp K | CBCP | Annual Operating Costs** | Warning and Caution Notices | Additional Information | |

Incandescent Lamps

Warning and Caution Notices

1

⚠ WARNING

Risk of electric shock

- a. Turn off power before inspection, installation or removal

2

⚠ WARNING

Risk of fire

- a. Keep combustible materials away from lamp
- b. Use in fixture rated for this product
- c. Use in fixture rated for this product – see instructions
- d. Operate base down to horizontal only
- e. Keep away from bed coverings, drapes and other combustible materials
- f. Do not use in enclosed fixture or with lamp shade
- g. Use in a high intensity fixture rated for this product
- h. Do not use as a night light
- i. Burning position base down only

3

⚠ WARNING

Lamp emits IR radiation which may cause eye injury

- a. Use in fixture approved for this product
- b. Do not use on infant, disabled, sleeping, or unconscious person/ animal unable to avoid potential injury

4

⚠ WARNING

Pressurized lamp – unexpected rupture may cause injury, fire, or property damage

- a. Use eye protection when handling lamp
- b. Avoid direct water/liquid contact
- c. Use in enclosed fixture rated for this product
- d. Operate lamp only in specified position

5

⚠ WARNING

Unexpected lamp rupture may cause injury, fire, or property damage

- a. Do not exceed rated voltage
- b. Avoid direct water/liquid contact
- c. Use in enclosed fixture rated for this product
- d. Do not use lamp if outer glass is scratched or broken
- e. Avoid direct water, liquid, or metal contact

6

⚠ WARNING

Risk of burn

- a. Do not touch operating lamp

7

⚠ CAUTION

Risk of burn

- a. Allow lamp to cool before handling
- b. Allow lamp/fixture to cool before handling
- c. Do not touch operating lamp

8

⚠ CAUTION

Lamp may shatter and cause injury if broken

- a. Do not use excessive force when installing lamp

9

Operating Instructions

- a. Burning position – base up
- b. Burning position – horizontal
- c. Burn base down only
- d. Burn base down to horizontal
- e. For best performance burn lamp within 45 degrees of vertical base up
- f. For best performance burn within 45 degree of base down to horizontal
- g. For best performance operate base up within 30° of vertical
- h. For best performance burn base down
- i. Do not burn in base up position
- j. To produce all three levels of light, this lamp should be tightened firmly, but not forcibly, in the socket to assure that all contacts are connected
- k. Should not be used in equipment where the base lamp will exceed 550°F (260°C)
- l. Will operate in any burning position, but fixed-socket usage other than base up, or continuous burning in any position in ambient temperatures above 150°F (66°C), may result in some loss of protective coating
- m. Reflectors and accessories may raise bulb temperature
- n. For use with heat-resistant connector supported by bulb rim or metal shell of base
- o. For best performance replace lamp if it blisters or darkens

Halogen Lamps

Bulb Identification

DIA. in.: Diameter of bulb at widest point.

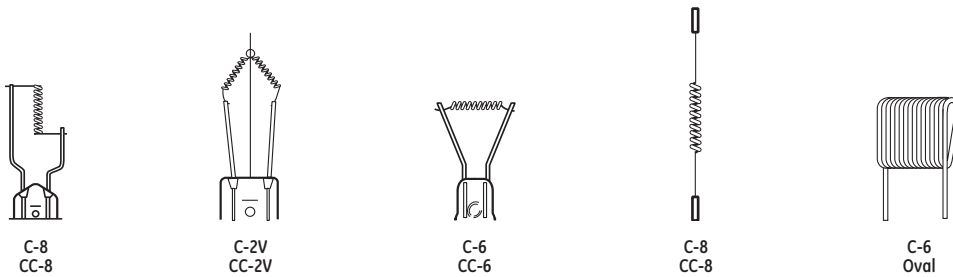

MOL in.: Maximum Overall Length including base or pins.

LCL in.: Distance between the center of the filament and the Light Center Length reference plane.

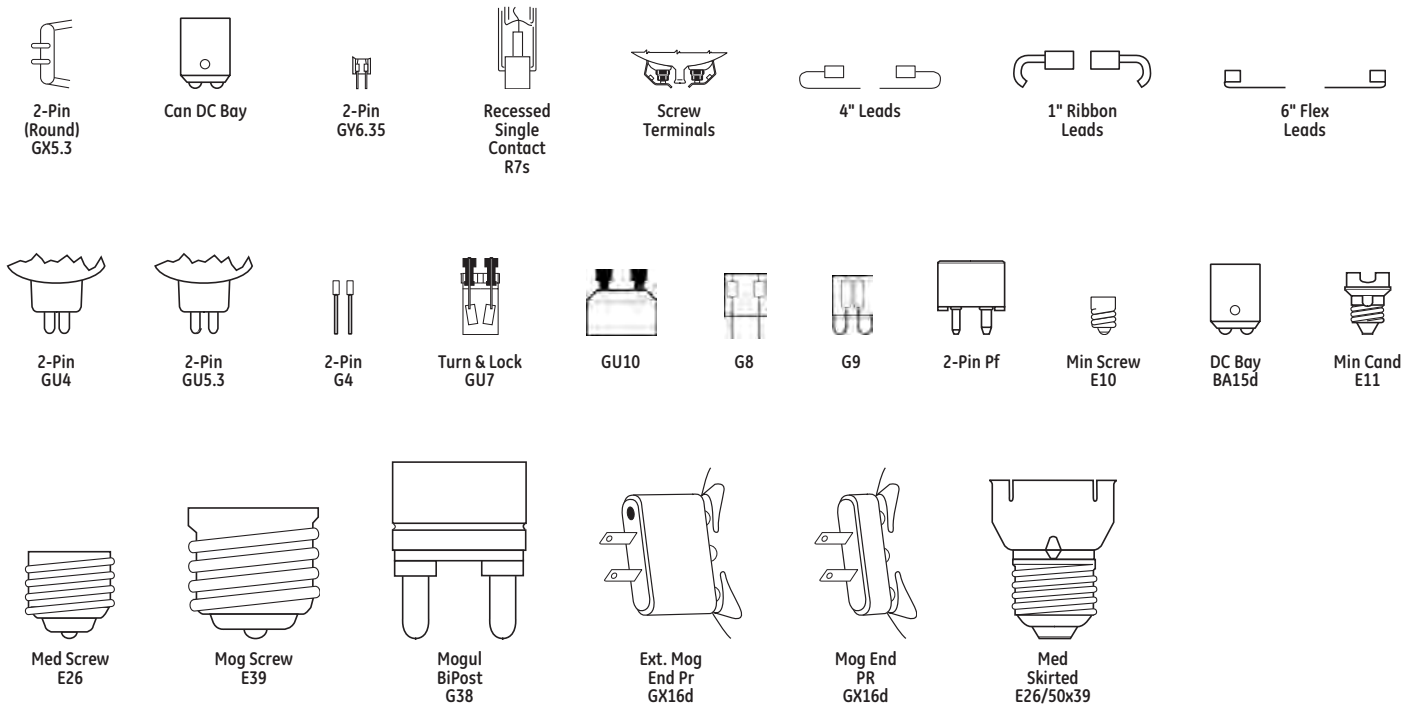

Note: Lamp drawings are not drawn to scale. Be sure to check size and dimension information when identifying each lamp.

To convert inches to millimeters, multiply the dimension (in inches) by 25.4 (i.e. 1.5" x 25.4 = 38.1 mm).

Filament Identification

Base Identification

Introduction

Halogen lamps provide a small, white light source with excellent color rendering. Unlike standard incandescent lamps, halogen lamps use a halogen gas which allows the bulbs to burn longer without sacrificing light output.

Compared to incandescent lamps, halogen lamps provide:

- Crisp, white light
- Excellent beam control
- Compact size
- High lumen maintenance
- Long life

Product Information

PAR38 vs. Standard Halogen

HIR™ Plus (PAR38) (pg 2-5)

- Up to 36% in energy savings
- Up to 50% longer life – 4200 hours

Standard Halogen (PAR38) (pg 2-5)

- Crisp, white light
- Life – 2000 hours

Halogen Compact PAR Lamps

Compact HIR™ PAR30 (pg 2-6)

- Long life – 4000 hours

Compact PAR30 Long Neck (pg 2-6)

- Energy-efficient replacement for R30 lamps
- Ideal for recessed fixtures

Compact PAR Halogen (PAR30/PAR20) (pg 2-6)

- Small size for “low profile” fixture
- Energy-efficient replacement for R20/R30 lamps
- Long life – 3000 hours

MR

Turn & Lock (TAL) ConstantColor® (MR16) (pg 2-8)

- User-friendly base...easy to install and remove
- Over 90% maintained light over life
- Excellent color maintenance
- Suitable for use in open fixtures

ConstantColor® Precise™ Cover Glass (MR16) (pg 2-9)

- Cover glass lens protects bulb from dust and dirt
- Suitable for use in open fixtures

ConstantColor® Precise™ (MR16) (pg 2-9)

- Precise beam control
- Excellent color maintenance
- Over 90% maintained light output over life
- Long life – up to 6000 hours (50-watt)

Precise™ Cover Glass IR (MR16) (pg 2-9)

- Energy-saving MR16
- 5000 hour lamp life

Standard MR (MR16/MR11) (pg 2-10)

- Small size for “low profile” look
- Crisp, white light

Linear Quartz

Linear Quartzline® HIR™ (pg 2-11)

- 30%-40% energy cost savings vs. standard quartz lamps
- 95% maintained light output over life
- Cooler operation increases fixture life

Halogen Lamps

Headings in this catalog section

The following terms and descriptions can help you when checking Halogen lamp specifications and when ordering products. Within each product line, lamps are divided into families. Within families,

lamps are listed by wattage. In each of these groups, lamps are listed alphabetically by bulb shape.

| | | | | | | | | | | | | | | | | | |
|---|-----------------------------------|--|---|---|--|--|-----------------------|---|---|---|---|--|---|---|--|--|---|
| Bulb Shape: Bulb shape followed by its size (the maximum diameter of the bulb expressed in eighths of an inch). | Base: The type of base. | Energy Used – Nominal Watts: Energy Used (as defined by FTC Lamp Label Rules). To estimate energy consumption (kWh), multiply watts x hours of use and divide by 1000. | Order Code: It is important to use this five-digit code when ordering to ensure that you receive the exact product you require. | Lamp Description: The lamp's identification code. | Case Quantity: Number of product units packed in a case. | Volts: Lamp data is based on operation at rated voltage. | Filament Type: | MOL (in): Maximum Overall Length in inches. | LCL (in): Distance between the center of the filament and the Light Center Length reference plane, in inches. | Rated Life (hours): Life (as defined by FTC Lamp Label Rules) is rated life in hours. | Rated Life (years): Life (as defined by FTC Lamp Label Rules) is rated life in years. | Lumens Initial: Light output (as defined by FTC Lamp Label Rules) is rated lumens. | Initial Color Temperature Kelvins (K): "Warmth" or "Coolness" of the lamp, measured in Kelvins (K). The higher the temperature, the cooler the appearance of the light. | Approximate CBCP (Center Beam Candlepower): For reflector-type lamps, Center Beam Candlepower is the intensity (candelas) at the center or maximum intensity of the beam. | Estimated Annual Operating Costs: Estimated yearly energy cost based on 3 hours/day, \$0.11/kWh. Actual cost depends on rates and use. | Warnings and Caution Notices: See page 2-17 for information. | Additional Information: Typical application and/or other important information. |

50 PAR / HIR / SP 10

Identifies the lamp's wattage.
Identifies the lamp shape and the bulb diameter in eighths of inches.
Identifies the lamp type.
Identifies as Spotlight.
Identifies beam angle, code may also include packaging information.

WHEN YOU DON'T KNOW THE LAMP DESCRIPTION

1. Identify bulb shape next to lamp information.
2. Measure bulb diameter using ruler in Appendix section page D-1 to determine width in eighths of an inch.
3. Identify base type using table on page 2-2.
4. Find your lamp in the table containing the bulb shape, size and base, which are all listed by wattage.

Halogen Lamps

General Information

Halogen Lamp Operating Precautions

The lamps listed in this catalog are filled to high internal gas pressures to maximize lamp efficacy (lumens per watt). Some general cautions are given below.

High Operating Temperatures

Since operating temperatures are critical to the effective self-cleaning properties of halogen lamps, filament tube wall temperatures should not go below 482°F (250°C). Hot spots on the bulb wall itself can go as high as 1230°F (700°C) in normal operation.

Substantial heat is generated in all halogen lamps, so equipment design should make allowance for the dissipation of excessive heat. Certain lamps and extremely confined fixtures may require additional ventilation or heat sinking to ensure proper operation of the halogen cycle and to prevent damage to the fixture. It is a good practice to test the lamp in the operating environment early in the design cycle to ensure adequate performance. Precautions must be taken in the selection of materials for lampholders, reflectors and lamp housings because the 1230°F (700°C) bulb wall temperature is greater than the kindling temperature of many materials. Lamp base temperatures should not exceed 662°F (350°C) because, above that point, lead wires may deteriorate and the basing cement loosen, causing premature lamp failure.

Distribution of Spectral Radiation

Halogen lamps offer large amounts of visible and infrared energy from a small light source, with about 90% of the energy in the infrared. Some halogen lamps can be used for special applications where small amounts of ultraviolet energy are required. The slight

ultraviolet radiation that comes from unprotected sources could cause skin and eye irritation following extended direct exposure. Passing the light through ordinary glass or plastic provides adequate protection. The lenses of the PAR, TAL or Cover Glass Precise™ lamps provide this protection.

Quartz Heat Lamps

GE standard quartz heat products are primarily pressurized halogen lamps. Many standard tungsten coil filaments have been converted to a deflection coil winding design that eliminates the need for filament supports through an integral coil/support construction. These changes will improve lamp life as well as keep the bulb wall cleaner during operation and throughout the life of the lamp.

In general, halogen lamps are more efficient than ordinary incandescent lamps. HIR™ lamps are the most efficient halogen lamps we offer. For each application, check life, lumens, wattage, beam spread and lamp dimensions to determine proper bulb selection.

GE has added a reflectorized heat lamp with a patented design that directs the infrared to a surface rather than in 360° angle.

Halogen Caution Notice – General

Halogen lamps are constructed of a glass bulb with a pressurized internal filament tube that operates at high temperatures and could unexpectedly shatter. Should the outer bulb break, particles of extremely hot glass could be discharged into the fixture enclosure and/or surrounding environment, thereby creating a risk of personal injury or fire.

Operating Notes

- Turn power off and let lamp cool before removal to avoid potential burn and electrical shock during lamp replacement
- Do not use lamp if outer glass is scratched or broken because it may break during installation or later during operation
- Do not use lamp in close proximity to combustible materials or those adversely affected by drying or fading action because of heat radiation in the lamp beam
- Dispose of removed lamp with care such as placing in used lamp carton or other closed container

Compact PAR Lamps (PAR20/30)

- Use outdoors in enclosed fixtures or where protected from exposure to water

Quartzline® PAR (250W)

- Avoid use where exposed to moisture which may cause lamp to break or shatter
- Do not operate lamp over 110% rated voltage. Overvoltage operation increases pressure and tendency to break.
- Use this lamp only in fixtures designed for Q250PAR38 lamps

Halogen A-Line (TB/H)

Caution: Cracked or broken bulbs that still light should be replaced immediately. The inner tube of the GE Halogen lamp is pressurized, operates at high temperature and could unexpectedly shatter with the possibility of property damage or personal injury. Avoid use in unstable table lamps, dispose of with care. To avoid burns, electricity should be switched off and the lamp allowed to cool for several minutes before removing from socket. Use outdoors only in enclosed fixtures or where protected from exposure to water.

Operating Notes – Low Voltage Lamps

Low voltage tungsten-halogen lamps are sensitive to voltage variations. Even a small change in voltage can have a considerable impact on lamp life. Designers should match fixture transformer ratings to actual line voltages to ensure that the lamps operate at as close to 12 volts as possible.

Rapid cycling can also shorten lamp life, and designers should take advice from their GE Lighting representative before using these lamps in flashing or blinking applications.

The lamps may be dimmed by reducing voltage. However, this may cause the bulbs to blacken. If this occurs the lamp should be run at full voltage for fifteen minutes, thereby clearing the problem. Note that the nature of low voltage lighting systems requires the use of fluorescent-type dimmers. Lamp can be operated on AC or DC currents.

Warning and Caution Notices

Bulb Identification

DIA: Diameter of bulb at widest point.

MOL: Maximum Overall Length including base or pins.

LCL: Distance between the center of the arc tube and the Light Center Length reference plane.

Note: Lamp drawings are not drawn to scale.

Be sure to check size and dimension information when identifying each lamp.

To convert inches to millimeters, multiply the dimension (in inches) by 25.4 (i.e. 1.5" x 25.4 = 38.1 mm).

Introduction

GE HID lamps provide the following benefits:

High Efficacy/Low Operating Cost.

HID is generally the most efficient light source. Better efficiency almost always means lower operating cost.

Long Life.

Most HID lamps have life ratings that are better than incandescent lamps and similar to fluorescent lamps.

Compact Size.

An HID lamp produces high light output from a relatively compact source. Like incandescent, it is a "point" light source, which allows for good optical control.

The chart at right shows how HID lamps compare to incandescent, halogen, and fluorescent in terms of efficiency and rated life.

Efficiency is measured in lumens per watt (LPW). Rated life for most lamp types is the number of burning hours when 50% of the tested samples have failed and 50% are still operational. For both HID and fluorescent, lamp life depends on the number of hours per start.

The combination of high efficiency and long life makes HID an ideal light source for many commercial and industrial applications.

Typical Lamp Characteristics

| Lamp Type | Typical LPW | Rated Life (in hours) |
|-------------------------------|-------------|-----------------------|
| Incandescent | 5-22 | 750-2000 |
| Halogen | 12-36 | 2,000-6000 |
| Compact Fluorescent | 27-80 | 9,000-20,000 |
| Fluorescent | 75-100 | 5,000-36,000 |
| Mercury | 50-60 | 12,000-24,000+ |
| ConstantColor® CMH® | 80-95 | 10,000-20,000 |
| Multi-Vapor® Metal Halide | 80-115 | 10,000-20,000 |
| Lucalox® High Pressure Sodium | 90-140 | 10,000-40,000 |

Suggested Color Applications for HID Lamps

CMH®: Stores, people places, display, accent.

MVR: Stores, public spaces, industrial, gymnasiums, floodlighting signs and buildings, parking areas, sports.

MVR/C: Same as MVR – warmer color-diffuse coating reducing glare.

MXR: Warm color (3200K) – good match for halogen.

LU: Street lighting, parking areas, industrial, floodlighting, security, CCTV.

LU/DX: Floodlighting, parking areas, indoor/outdoor pedestrian malls, industrial, security, roadway.

Deluxe (DX) Mercury: Stores, public spaces – metal halide lamps however, are preferred.

Clear Mercury: Landscape lighting, specialized floodlighting such as green copper roofs.

Product Information

GE ConstantColor® CMH® and CMH® Ultra Ceramic Metal Halide Lamps (pgs 3-9 to 3-11)

- Color uniformity lamp-to-lamp and over lamp life
- Excellent color rendering (80+ CRI, 90+ CRI for SPXX versions)
- Delivers more light than standard metal halide (10%–20% more)
- Lamp operates at high efficacy—up to 95 lumens per watt
- Many are universal burn—may be operated in any position
- Perfect for retail and commercial display lighting, accent and floodlighting, lobby and foyer lighting. Ideal for “people places”

GE CMH® Chromafit™ Ceramic Metal Halide Lamps (pg 3-11)

- Convert High Pressure Sodium sockets to crisp, white ceramic metal halide light (80+ CRI)
- Operate on standard HPS ballasts and auxiliary equipment
- Universal burn—may be operated in any position
- Uses: Area lighting, industrial and “people places”
- Enclosed glass fixtures only

GE PulseArc® Medium Based Metal Halide Lamps (/MED models) (pg 3-12)

- Low wattage metal halide lamps (formerly Halarc®) are now part of the PulseArc® family
- Compact source
- Sparkling white light (3000-4000K) and very good color rendition (70-75 CRI)
- High efficacy—more than 3 times the lumens per watt of incandescent
- Long life—up to 15 times longer than incandescent systems and up to 7 times longer than most PAR and R systems, saving maintenance and labor costs
- Superior optical control
- Uses: Display lighting, downlighting, floodlighting, corridors, lobbies, walkways; retail, office, commercial

GE PulseArc® Multi-Vapor® Metal Halide Lamps (/PA Models) (pgs 3-12 to 3-13)

- Designed for operation only on approved ballasts with metal halide pulse ignitors
- More light—400W lamps provide highest initial and highest maintained lumens versus other standard universal or vertical base-up lamp options
- 50% longer life—400W lamps provide 30,000 hours life when burned on 120 hour on/1 hour off cycle (approximately continuous)
- Faster hot restrike—less than 4 minutes versus 10-15 minutes for typical metal halide lamps

GE Multi-Vapor® Metal Halide Lamps (pg 3-13)

- Sparkling white light (3000-4000K) and very good color rendition (65-75 CRI)
- Warm, rich 3000K color of SP30 blends well with incandescent, halogen and triphosphor fluorescent lamps for interior retail applications
- High efficacy—more efficient than incandescent, mercury and most fluorescent sources
- Long life—10,000-20,000 hours for most types

- Full line, 150-1000 watts, to meet most application needs
- Uses: Downlighting, floodlighting, corridors, lobbies, walkways; retail, commercial, industrial

GE High Output Multi-Vapor® Lamps (pgs 3-13 to 3-14)

- More light—optimized for higher light output in horizontal, vertical base-up and base-down burn applications
 - Horizontal burn lamps provide up to 25% more light than standard universal burn equivalents
 - 400W vertical burn lamps provide up to 22% more light than standard universal burn equivalents; the highest lumen lamps available for operation on standard M59 ballasts
- Longer life—horizontal burn lamps last up to 67% longer than universal burn lamp equivalents, significantly reducing replacement lamp and maintenance costs

GE Protected High Output Multi-Vapor® Lamps (/O) (pgs 3-14 to 3-15)

- Protective quartz jacket surrounds the arc tube
- The/O suffix and/or the “MPR” prefix in the Lamp Description indicates lamps are suitable for open fixture applications

GE ChromaFit™ Multi-Vapor® Lamps (/R) (pg 3-15)

- Convert high pressure sodium sockets to crisp white metal halide light (65-70 CRI)
- Operate on standard HPS ballasts and auxiliary equipment
- Uses: Area lighting, industrial and “people places”

GE Lucalox® High Pressure Sodium Lamps (pg 3-15)

- Very high efficacy/low operating cost
- Excellent lumen maintenance—over 90% @ 50% of life
- Very long life—24,000+ hours
- Universal burn—can be operated in any position without affecting performance
- Warm color
- For open or enclosed fixtures
- Uses: Industrial, roadway, security, floodlighting

GE Ecolux® High Pressure Sodium Lamps (/ECO) (pgs 3-15 to 3-16)

- Lead-free base. Passes TCLP, which can lower disposal costs.

GE Standby Longlife Lucalox® and Ecolux® Lamps (/SBY) (pgs 3-16 to 3-17)

- Extra arc tube provides light instantly after momentary power interruption, and will increase to 80% light output in 1-2 minutes
- Dual arc tubes provide 40,000 hour rated life
- Operates on standard HPS ballasts and auxiliary equipment
- Uses: Industrial, roadway, security, and hard-to-reach sockets
- Ecolux® lamps use lead-free bases. Passes TCLP, which can lower disposal costs.

Product Information (continued)

GE Ecolux® NC “Non-Cycling” High Pressure Sodium Lamps (/ECO/NC) (pg 3-17)

- Low mercury. Passes TCLP, which can lower disposal costs.
- Non-cycling feature makes locating and replacing end-of-life lamps quick and easy
- Lead-free base
- High efficacy/low operating cost
- 6%-11% higher initial lumens than standard HPS in 100W and 400W versions
- Long life—up to 40,000 hours
- Open or enclosed fixtures
- Uses: Industrial, roadway, security

GE Mercury Lamps (pg 3-17)

- Long life and good efficacy
- Phosphor coated Deluxe lamps provide good color rendering (50CRI)
- Uses: Industrial, roadway, landscapes, residential and commercial security, parking lots

ATTENTION: This brand-name cross-reference chart is provided only as a quick reference. Other lamp company brand listings may only represent a near equivalent, versus an identical match to GE Lighting brands. Individual lamp manufacturers' performance specifications should be consulted. Lamp performance may be affected by environmental conditions, ballast type and/or other auxiliary equipment.

Headings in this catalog section

The following terms and descriptions can help you when checking High Intensity Discharge lamp specifications and when ordering products. Within each product line, lamps are divided into families. Within families, lamps are listed by wattage. In each of these wattage groups, lamps are listed by bulb shape.

Bulb Shape:

Bulb shape followed by its size (the maximum diameter of the bulb expressed in eighths of an inch).

Energy Used – Nominal Watts:

Energy Used (as defined by FTC Lamp Label Rules). To estimate energy consumption (kWh), multiply watts x hours of use and divide by 1000.

Mean Lumens:

Lamp light output (lumens) at 40% of rated lamp life for Metal Halide lamps and 50% of rated life for Mercury and HPS lamps.

CBCP (Center Beam Candlepower):

For reflector-type lamps. Center Beam Candlepower is the intensity (candelas) at the center or maximum intensity of the beam. Used only for ConstantColor® CMH® Metal Halide Lamps.

Color Temperature Kelvins (K):

A measure of the visual "warmth" or "coolness" of the light from the lamp. The higher the value the whiter or "cooler" the light appears.

Color Rendering Index (CRI):

An indication of the ability of the lamp to render object colors in a normal, natural way. The higher the number (0-100), the better the color appearance.

Additional Information:

Typical application and/or other important information.

Footnotes:

See page 3-19.

Warning and Caution Notices:

See page 3-21.

LET (Lamp Enclosure Type):

Describes fixture requirements for this lamp.

OP (Operating Position)

LCL (in):

Distance between the center of the filament and the Light Center Length reference plane, in inches.

Order Code:

It is important to use this five-digit code when ordering to ensure that you receive the exact product you require.

Case Qty:

Number of product units packed in a case.

ANSI Ballast Type:

Ballast type used to operate lamp.

Initial Lumens:

Initial light output.

Rated Life (hours):

Lamp burning hours to median life expectancy.

MOL (in):

Maximum Overall Length in inches.

Description:

The lamp's identification code.

Base:

The type of base.

| Bulb Shape | Base | LET | OP | Watts | MOL (in) | LCL (in) | Order Code | Description | ANSI Ballast Type | Case Qty | CBCP | Rated Life (hrs) | Initial Lumens | Mean Lumens | Color Temp K | CRI | Additional Information | Footnotes | Warning and Caution Notices |

Identifies as CMH® lamp.

Identifies the lamp's wattage.

Identifies the bulb shape.

Color temp. and CRI.

Additional information.

WHEN YOU DON'T KNOW THE LAMP DESCRIPTION

1. Identify bulb shape by using illustrations on pages 3-2 to 3-4.
2. Measure bulb diameter using ruler in Appendix section page D-1 to determine width in eighths of an inch.
3. Identify base type using table on page 3-5.
4. Find your lamp in the tabular data containing the bulb shape, size and base, which are all listed by wattage.

| Bulb Shape | Base | LET | OP | Watts | MOL (in) | LCL (in) | Order Code | Description | ANSI Ballast Type | Case Qty | CBCP | Rated Life (hrs) | Initial Lumens | Mean Lumens | Color Temp K | CRI | Additional Information | Reduced Watts/ High Color Rendering | Footnotes | Warning and Caution Notices |

High Intensity Discharge Lamps

General Information

Fixture Requirements – Lamp Enclosure type

HID lamps have fixture requirements that must be followed. The following three codes identify the appropriate fixture for a particular lamp. Lamps having an “O” code can be operated in an “Open or Enclosed” fixture. Lamps with a “S” code can be used in open fixtures only if operated in a vertical $\pm 15^\circ$ burn position. Lamps in all other burn positions must be suitably enclosed.

O = Open or Enclosed Fixtures

E = Enclosed Fixtures Only

S = Lamps operated in a vertical position (Base Up or Down), $\pm 15^\circ$, can be used in an open fixture. Lamps burned in any other orientation must be used in “enclosed fixtures only.”

Use in Enclosed Fixtures. “Enclosed” fixture means a fixture suitably enclosed and designed to contain fragments of hot quartz or glass (up to 1100°C) per UL Standard #1598 (if in doubt, contact your fixture manufacturer).

Use In Open Fixtures. For lamps operated in the vertical position $\pm 15^\circ$ that are not designated “Enclosed Fixtures Only,” lamp may be used in an open or enclosed lighting fixture depending upon the application and operating environment. For example, if the lamp is located near combustible material or in an area which is unoccupied for extended periods, an enclosed fixture which can contain fragments of hot quartz or glass is recommended. For more information, contact your fixture manufacturer.

Protection of Bulbs from Moisture

Outer bulbs of HID lamps are made of heat-resistant glass, designed to have strength and thermal-shock-resistant characteristics suitable for normal applications in typical luminaries. However, shielding of lamps must be provided to avoid bulb breakage that could result from direct contact with liquids (such as water) during operation.

Rated Life

Values are based on laboratory tests of a large number of representative lamps under controlled conditions, including operation at 10 hours per start on ballasts having specified electrical characteristics. Individual lamps or groups of lamps may, of course, vary from the Rated Life shown. Lamp operating conditions can also affect life. Where Rated Life is less than 24,000 hours, it is a MEDIAN value of life expectancy; that is, the total operating time at which, under normal operating conditions, 50% of any large group of initially installed lamps is expected to be still burning. Where Rated Life is 24,000+ hours, 67% of lamps are expected to be still burning at 24,000 hours. For cost-of-light calculations involving these lamps, if an estimated operating time is required at which 50% of the lamps will still be burning, a value of 28,500 hours is suggested. At burning cycles shorter than 10 hours per start, the median life will be shortened approximately as follows:

5 hrs/start: approx. life 75% of rating

2-1/2 hrs/start: approx. life 56% of rating

1-1/4 hrs/start: approx. life 42% of rating

Lumens – Lumens listed are reference lumens

Rated average lamp lumens are obtained under controlled laboratory conditions in a prescribed burning position. **Initial Reference Lumens** refer to the lamp lumen output after 100-hours burning. **Mean Reference Lumens** refer to the lamp lumen output at the mean lumen point during lamp life. The mean lumen point occurs at 50% rated life for HPS and mercury lamps, and at 40% rated life for metal halide lamps. Lamp performance on typical systems under typical service conditions will vary from the reference lumen ratings.

High Intensity Discharge lighting systems are subject to a wide range of variations which may affect final lighting levels. As a result, lamp performance on actual systems may vary due to lamp orientation, ambient temperatures, ballast variations, line voltage and other

reasons. Care must be taken when choosing a system to consider how these changes can affect your light levels both initially and at the mean lumen point.

Ballasts

HID lamps (except E-Z-Merc[®]) require auxiliary ballast equipment designed to produce proper electrical values. Actual lamp watts may vary depending on ballast characteristics. For total system watts, add nominal ballast watts.

All Lucalox[®], Mercury, and Metal Halide lamps (except I-Line) will start at ambient temperatures of -22°F (-30°C). I-Line Multi-Vapor[®] will start at ambient temperatures of 5°F (-15°C) when used on approved mercury ballasts.

Start Characteristics

Full light output does not occur immediately when power is applied. Instead, there is a time delay for the lamp to reach 90% total light output. The starting delay for High Pressure Sodium is 3-4 minutes, for Metal Halide 2-5 minutes, and for Mercury 5-7 minutes.

Restart Characteristics

With a power interruption of a half cycle or more, the arc will extinguish. When power is immediately reapplied, full light output does not occur immediately. For HPS lamps there is a delay of 1 minute to reach 90% total light output; however, Lucalox[®] LU1000 requires 2 minutes and E-Z Lux[®] lamps require 3 minutes to reach 90% total light output. For most Metal Halide lamps, including CMH[®], when the power is immediately reapplied, there will be a delay of 10 to 17 minutes before the lamps reach the 90% light output level. PulseArc[®] lamps restrike in <4 minutes. The restart delay for mercury lamps is 3 to 6 minutes to reach 90% total light output.

Operating Positions and Codes

Mercury and High Pressure Sodium lamps may be operated in any burn position and will still maintain their rated performance specifications. Metal Halide and Low Pressure Sodium lamps, however, are optimized for performance in specific burn positions, or may be restricted to certain burn positions for safety reasons.

U = Universal burning position

HBU = Horizontal -15° to Base Up

HBD = Horizontal $+15^\circ$ to Base Down

HOR = Horizontal $\pm 15^\circ$

HOR PA = $\pm 75^\circ$

HOR $\pm 60^\circ$ = applies to MVR 1650

H45 = Horizontal to $\pm 45^\circ$ only

VBU = Vertical Base Up $\pm 15^\circ$

VBD = Vertical Base Down $\pm 15^\circ$

If no special burn position is noted, the burn position is universal.

HID Color

The color temperature and CRI listed in the tabular data are for reference purposes only. All high intensity discharge lamps exhibit some degree of lamp-to-lamp color variation and shift over life. These characteristics can be increased based on choice of fixture, ballast, burning position, and ambient conditions. Color variation can be greater than normal during the initial 100 hours of burning. Where color consistency is important, consider using ConstantColor[®] CMH[®] for better performance. Contact your local GE Lighting representative for more information.

Export Base Lamps (/27 and /40)

Export only lamps have a non-domestic (non-U.S.) base and are not intended for use in the United States due to potential shock hazard. The lamps are identified by “/27” or “/40” at the end of the lamp description and comply with electrical characteristics defined by IEC standards.

Operating Notes

CMH® Chromafit™ Metal Halide Lamps

Use in enclosed luminaire with front cover made of glass, capable of containing the fragments of a lamp should it shatter, to avoid risk of fire. Do not use with Polymeric Lens.

MXR32 Metal Halide Lamp and Electronic Ballast

MXR32 lamps must be operated on GE's special, high-power-factor electronic ballast, HAL32/120. Outside dimensions for the ballast are 9-1/4" long, 3-1/8" wide and 1-3/4" high.

Dimming

High Wattage CMH® lamps may be dimmed to 50% of full rated wattage. With dimming, the color shifts to a cooler (higher Kelvin) temperature and CRI decreases. The dimming of 20-150W CMH® lamps is not normally recommended. Large power reductions significantly alter the thermal characteristics of the lamp resulting in color shift. Quartz metal halide and mercury vapor lamps may be dimmed to 50% of full rated wattage. High pressure sodium lamps

may be dimmed to 35%. For all dimming, the lamp must be started in full-power mode and must be operated in that mode for a minimum of fifteen minutes prior to reduced-power operation. Minimum open circuit voltage must meet ANSI requirements at full-power, during power transition, and in the reduced-power mode to prevent premature cycling (see appropriate ANSI lamp documents for specific minimum OCV requirements). Other application guidelines may apply.

Footnotes

- 9 Do not use this lamp in fixtures designed for less than rated lamp wattage.
- 14 Life shown is for vertical +15° operation.
- 16 Approximate lumen ratings at 45° burning position: Initial – 145,000. Mean – 124,000.
- 17 Rated life based on 5 or more burning hours per start.
- 28 Use only 1000-watt H12 or H34-type ballasts. Do not use on 1000-watt H36-type ballasts.
- 32 Lamp will run at 400-watts when used on a linear reactor ballast.
- 33 Rated life based on 11 hours per start.
- 38 Requires a non-ANSI designated ballast with a special, add-on metal halide ignitor. Contact your local GE representative for a list of approved ballasts and ignitors.
- 39 UV Control is a quartz material that effectively cuts UVB and UVC radiation.
- 42 Approximate lumen ratings at 45° burning position: Initial – 153,000. Mean – 139,000.
- 43 When operated on a 120 hrs. cycle (minimum), lamp life rating may be extended by up to 50% based on engineering estimates.
- 44 Rated life based on 7 hours per start.
- 45 Use low frequency square wave (LFSW) electronic ballast, peak lead ballast, or system which can shut itself off if ballast overheating occurs.
- 46 Use only with the following types of H39 175-watt mercury ballasts: high-reactance lag-type autotransformers or 240-volt and 277-volt reactors. Do not use with CW (lead-type) or CWA ballasts.
- 47 Use only with the following types of H37 250-watt mercury ballasts: high-reactance lag-type autotransformers or 240-volt and 277-volt reactors. Do not use with CW (lead-type) or CWA ballasts.
- 48 Use only with the following types of H33 400-watt mercury ballasts: high-reactance lag-type autotransformers, reactors, CWA auto regulators or CW regulators.
- 49 Not for use with lampholders that have stainless steel center contacts to avoid lamp or lampholder damage due to arcing.
- 50 Not for use on Magnetic-Regulator or Electronic-Regulator ballast systems to avoid ballast overheating.
- 51 Use only with low frequency square wave (LFSW) electronic ballast.
- 52 Use only with approved ballast, do not use on high frequency electronic ballasts.
- 53 Rated life is 15000 hours on magnetic ballasts.

Warning Notices

THE FOLLOWING WARNING NOTICES MUST BE COMPLIED WITH TO HELP AVOID POSSIBLE LAMP RUPTURE. General Electric Company will not be responsible for poor lamp performance, personal injury or property damage resulting from failure to follow these instructions.

HID LAMPS – GENERAL

WARNING

Most HID lamps are constructed of an outer bulb with an internal arc tube made of quartz. The arc tube operates under high pressure at very high temperatures—as high as approximately 1100°C. The arc tube and outer bulb may unexpectedly rupture due to internal causes or external factors such as a system failure or misapplication.

An arc tube rupture can burst and shatter the outer glass bulb resulting in the discharge of glass fragments and extremely hot quartz particles (as high as 1100°C). There is a risk of personal injury, property damage, burns and fire.

Some lamps are position-sensitive and must only be operated in specified burning positions (see “Additional Information” column in this catalog) with compatible electrical equipment in the types of fixtures prescribed in “Lamp Enclosure Type” on page 3-22 of this catalog.

In addition to the general warnings above, there are specific warnings for the HID lamp types listed below.

Metal Halide Lamps

Fixture lens/diffuser material must be able to contain fragments of hot quartz or glass (up to 1100°C). If you do not know whether your fixture can safely withstand an arc tube rupture, contact your fixture manufacturer.

In continuously operating systems (24 hours/day, 7 days/week), turn lamps off once per week for at least 15 minutes. **FAILURE TO COMPLY INCREASES THE RISK OF RUPTURE.**

Ceramic metal halide lamps can be operated 24/7.

Relamp fixtures at or before the end of rated life. Beyond rated life, light output diminishes while energy consumption and risk of rupture increase.

Important Notice

In accordance to Federal Regulations (21 CFR 1040.30), the following notice applies to all lamps in the HID section of this catalog except E-Z Merc self ballasted lamps, High Pressure, Low Pressure Sodium Lamps, Saf-T-Gard® Multi-Vapor Lamps, CMH® MR16, CMH® PAR20 and CMH® PAR30.

High Pressure Sodium Lamps

This is a vacuum jacket lamp and may implode if broken. As a precaution, wear safety glasses and gloves when installing or removing lamp. High pressure sodium lamps are not position-sensitive and may be operated in any burning position.

Mercury Lamps

Fixture lens/diffuser material must be able to contain fragments of hot quartz or glass (up to 1100°C). If you do not know whether your fixture can safely withstand an arc tube rupture, contact your fixture manufacturer.

Relamp fixtures at or before the end of rated life. Beyond rated life, light output diminishes while energy consumption and risk of rupture increase.

Mercury lamps are not position-sensitive and may be operated in any burning position.

Low Pressure Sodium Lamps

These lamps contain sodium which will ignite when exposed to water. If lamps are not disposed of properly, there is a risk of fire in the disposal vessel. Consult GE for disposal instructions.

Lamp Enclosure Type

Use in Enclosed Fixtures. “Enclosed” fixture means a fixture suitably enclosed and designed to contain fragments of hot quartz or glass (up to 1100°C) in accordance with UL Standard #1598 (if in doubt, contact your fixture manufacturer).

Use In Open Fixtures. For lamps operated in the vertical position $\pm 15^\circ$ that are not designated “Enclosed Fixtures Only,” lamp may be used in an open or enclosed lighting fixture depending upon the application and operating environment. For example, if the lamp is located near combustible material or in an area which is unoccupied for extended periods, an enclosed fixture which can contain fragments of hot quartz or glass is recommended. For more information, contact your fixture manufacturer.

⚠ R WARNING: This lamp can cause serious skin burn and eye inflammation from shortwave ultraviolet radiation if outer envelope of the lamp is broken or punctured. Do not use where people will remain for more than a few minutes unless adequate shielding or other safety precautions are used. Lamps that will automatically extinguish when the outer envelope is broken or punctured are commercially available.

Warning and Caution Notices

100 – CMH® PAR38 INTEGRAL Kr85

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal
- Do not use where directly exposed to water
- Not for use with dimmers
- Do not open - no user serviceable parts inside

Risk of fire

- Keep combustible materials away from lamp
- Do not use in totally enclosed recessed fixtures

A damaged lamp emits UV radiation which may cause eye/skin injury

- Turn power off if glass bulb is broken. Remove and dispose of lamp.

Unexpected lamp rupture may cause injury, fire, or property damage

- Do not exceed rated voltage
- Do not use lamp if outer glass is scratched or broken
- Do not store flammable materials near/below lamp
- Do not use beyond rated life
- Do not turn on lamp until fully installed

⚠ CAUTION

Risk of burn

- Allow lamp to cool before handling
- Do not turn on lamp until fully installed

Lamp may shatter and cause injury if broken

- Do not use lamp if outer glass is scratched or broken
- Dispose of lamp in a closed container
- Do not use excessive force when installing lamp

Notes

- ARC tube fill gas contains Kr85
- CMH® lamps may operate 24 hours a day/7 days a week to rated life—no shut off required
- This product complies with Part 18 of the FCC Rules, but may cause interference to radios, televisions, wireless telephones, and remote controls. Avoid placing this product near these devices. If interference occurs, move the product away from the device or plug either into a different outlet. Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45-30 MHz. This device is not intended for use with emergency exit fixtures or lights, electronic timers, photocells, or with dimmers
- Use only on 120V, 60Hz circuits. Do not operate with additional ballasts. Do not use where directly exposed to water.
- When illuminating light-sensitive materials use of an extra UV filter is recommended.
- Lamps may require several hours of operation to stabilize in color. Color change may also be affected by shock and vibration. Color appearance may vary between individual lamps.

101 – Arcstream®

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal
- Do not use where directly exposed to water or outdoors without an enclosed fixture

Risk of fire

- Keep combustible materials away from lamp
- Use in fixture rated for this product
- Use thermally protected ballast

A damaged lamp emits UV radiation which may cause eye/skin injury

- Turn power off if glass bulb is broken. Remove and dispose of lamp.

Unexpected lamp rupture may cause injury, fire, or property damage

- Do not exceed rated voltage
- Do not use where directly exposed to water or outdoors without an enclosed fixture
- Use in enclosed fixture rated for this product
- Do not use lamp if outer glass is scratched or broken
- Use only properly rated ballast
- Operate lamp only in specified position
- Turn lamp off at least once for 15 minutes per week
- Do not turn on lamp until fully installed

⚠ CAUTION

Risk of burn

- Allow lamp to cool before handling
- Do not turn on lamp until fully installed

Lamp may shatter and cause injury if broken

- Wear safety glasses and gloves when handling lamp
- Do not use lamp if outer glass is scratched or broken
- Do not use excessive force when installing lamp

102 – Arcstream® G12 Kr85

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal
- Do not use where directly exposed to water or outdoors without an enclosed fixture

Risk of fire

- Keep combustible materials away from lamp
- Use in fixture rated for this product
- Use thermally protected ballast

Lamp emits UV radiation which may cause eye/skin injury

- Eye or skin irritation may result from exposure. Use appropriate shielding. RG-2

Unexpected lamp rupture may cause injury, fire, or property damage

- Do not exceed rated voltage
- Do not touch glass with bare hands
- Do not use where directly exposed to water or outdoors without an enclosed fixture
- Use in enclosed fixture rated for this product
- Do not use lamp if outer glass is scratched or broken
- Use only properly rated ballast

- Dispose of lamp in a closed container
- Do not use excessive force when installing lamp

Notes

- ARC tube fill gas contains Kr85

104 – CMH® GU6.5, G12 and Mini Kr85

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal
- Do not use where directly exposed to water or outdoors without an enclosed fixture

Risk of fire

- Keep combustible materials away from lamp
- Use in fixture rated for this product
- Use fused or thermally protected ballast—see instructions

A damaged lamp emits UV radiation which may cause eye/skin injury

- Turn power off if glass bulb is broken. Remove and dispose of lamp.

Unexpected lamp rupture may cause injury, fire, or property damage

- Do not exceed rated voltage
- Normal handling with bare hands is acceptable. Excessive handling of the quartz outer bulb should be avoided.
- Do not use where directly exposed to water or outdoors without an enclosed fixture
- Use in enclosed fixture rated for this product
- Do not use lamp if outer glass is scratched or broken
- Use only properly rated ballast
- Do not use beyond rated life
- Do not turn on lamp until fully installed

⚠ CAUTION

Risk of burn

- Allow lamp to cool before handling
- Do not turn on lamp until fully installed

Lamp may shatter and cause injury if broken

- Do not use lamp if outer glass is scratched or broken
- Do not use excessive force when installing lamp

Notes

- ARC tube fill gas contains Kr85
- CMH® lamps may operate 24 hours a day/7 days a week to rated life—no shut off required

105 – CMH® HW HPS Kr85

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal
- Do not use where directly exposed to water or outdoors without an enclosed fixture

Risk of fire

- Keep combustible materials away from lamp
- Use in fixture rated for this product
- CMH® Chromafit™ lamps are compatible with properly rated magnetic HPS ballasts and low frequency square wave (LFSW) electronic ballasts. For CMH400 /R use LFSW electronic ballast, peak lead ballast or system which can shut itself off if ballast overheating occurs.

A damaged lamp emits UV radiation which may cause eye/skin injury

- Turn power off if glass bulb is broken. Remove and dispose of lamp.

Unexpected lamp rupture may cause injury, fire, or property damage

- Do not exceed rated voltage
- Do not use where directly exposed to water or outdoors without an enclosed fixture
- Use in enclosed luminaire with front cover made of GLASS, capable of containing the fragments of a lamp should it shatter, to avoid risk of fire. Do not use with polymeric lens.
- Do not use lamp if outer glass is scratched or broken
- Use only properly rated ballast
- Do not use beyond rated life
- Do not turn on lamp until fully installed

Warning and Caution Notices (continued)

- Do not exceed rated voltage
- Do not use where directly exposed to water or outdoors without an enclosed fixture
- Do not use lamp if outer glass is scratched or broken
- Use only properly rated ballast
- Operate lamp only in specified position
- Turn lamp off at least once for 15 minutes per week
- Do not store flammable materials near/below lamp
- Do not use beyond rated life
- If used on a dimming system, see instructions.
- Do not turn on lamp until fully installed

⚠ CAUTION

Risk of burn

- Allow lamp to cool before handling
- Do not turn on lamp until fully installed

Lamp may shatter and cause injury if broken

- Do not use lamp if outer glass is scratched or broken
- Dispose of lamp in a closed container
- Do not use excessive force when installing lamp

120 – QMH Protected Kr85

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal
- Do not use where directly exposed to water or outdoors without an enclosed fixture

Risk of fire

- Keep combustible materials away from lamp
- Use in fixture rated for this product

A damaged lamp emits UV radiation which may cause eye/skin injury

- Turn power off if glass bulb is broken. Remove and dispose of lamp.

Unexpected lamp rupture may cause injury, fire, or property damage

- Do not exceed rated voltage
- Do not use where directly exposed to water or outdoors without an enclosed fixture
- Do not use lamp if outer glass is scratched or broken
- Use only properly rated ballast
- Operate lamp only in specified position
- Turn lamp off at least once for 15 minutes per week
- Do not store flammable materials near/below lamp
- Do not use beyond rated life
- Do not turn on lamp until fully installed

⚠ CAUTION

Risk of burn

- Allow lamp to cool before handling
- Do not turn on lamp until fully installed

Lamp may shatter and cause injury if broken

- Do not use lamp if outer glass is scratched or broken
- Dispose of lamp in a closed container
- Do not use excessive force when installing lamp

Notes

- ARC tube fill gas contains Kr85

Fluorescent Lamps

Base Identification

Introduction

GE introduced the first fluorescent lamp in 1939. Today, these lamps have become almost a universal standard in office and other lighting applications. The characteristics of fluorescent lamps vary widely according to the lamp type. In general, fluorescent lamps have the following advantages:

- Low Operating Cost:**
 Efficient, fluorescent lamps can cost significantly less to operate over their lifetime than incandescent lamps. Many common linear fluorescent lamps now have energy-saving versions often designated in this catalog by Watt-Miser® (WM).
- Long Life:**
 Life ratings for fluorescent lamps range from 36,000 to 55,000 hours based on the industry standard of 3 burning hours per start, except where noted.
- Light Quality:**
 GE Starcoat® T5 and T8 lamps offer higher color rendering and lumen maintenance of 92%-95%.
- Flexibility:**
 Fluorescent lamps are available in a wide range of sizes, shapes, color performance, and wattage ratings.
- Fast Starting:**
 Rapid Start and Instant Start lamps typically start within 1 second of being turned on.

ATTENTION: This brand-name cross-reference chart is provided only as a quick reference. Other lamp company brand listings may only represent a near equivalent, versus an identical match to GE Lighting brands. Individual lamp manufacturers' performance specifications and product offerings should be consulted. Lamp performance may be affected by environmental conditions, ballast type and/or other auxiliary equipment.

See www.gelighting.com e-Catalog for a comprehensive cross-reference tool.

Life ratings are based on engineering data on programmed start ballasts with lamps cycled every 3 operating hours.

Product Information

GE T5 Starcoat® Ecolux® Lamps (pg 4-8)

- Used in a variety of applications from indirect fixtures in commercial office buildings to warehouses and manufacturing facilities
- Many combinations of wattage and length provide flexibility of fixture design and ceiling layout
- Longer rated life at 30,000 hours
- TCLP compliant, lowering disposal costs where applicable (state regulations vary, consult your state EPA)

GE Ultra Energy Saving T5 Lamps (pg 4-8 to 4-9)

- High Output Watt-Miser®: Over 5% energy savings versus standard Starcoat® T5 HO lamps. Same lumen output. Great for use in high-bay systems.
- High Efficiency Watt-Misers®: Over 5% energy savings versus standard Starcoat® T5 HE lamps. Same lumen output. Available in four different lengths.
- High Lumen T5: 5% greater lumen output versus standard Starcoat® F28WT5 lamps. Same wattage. Great for new commercial troffers.
- Excellent color rendering – 85 CRI
- TCLP compliant, lowering disposal costs where applicable (state regulations vary, consult your state EPA).

GE Ultra Energy Saving Ecolux® T5 High Output 47 Watt Watt-Miser® (pg 4-9)

- GE's highest efficiency and lowest wattage T5 HO combination at 102 LPW
- Relamp existing full wattage 54W lamp with the 47W T5 lamp and saves energy
- TCLP compliant, lowering disposal costs where applicable (state regulations vary, consult your state EPA)

GE T8 Starcoat® Ecolux® Lamps (pgs 4-9 to 4-10)

- More light over life – 94-95% lumen maintenance
- Enhanced color rendering...available in 700 and 800 series
- High system efficiency, relative to T12, delivers significant energy cost savings
- TCLP Compliant, lowering disposal costs where applicable (state regulations vary, consult your state EPA)

GE Starcoat® Ecolux® XL Extra-Life and SXL Super Long Life lamps (pgs 4-9 to 4-10)

- Same great features of the T8 Starcoat® Ecolux®...with longer life... up to 67% longer than standard T8 lamps

GE Ultra Energy Saving T8 Lamps 2ft and 3ft T8 Watt-Misers® (pg 4-10 to 4-11)

- Energy-saving alternative to standard 2ft and 3ft T8 lamps. Up to 12% energy savings versus standard F17T8 and/or F25T8 lamps, with approximately 10% light loss.
- Excellent color rendering – 80+ CRI
- TCLP compliant, lowering disposal costs where applicable (state regulations vary, consult your state EPA).

GE Ultra Energy Saving T8 Lamps 4ft T8 25 Watt Lamp (pg 4-11)

- Lowest wattage 4ft T8 currently available.
- Longer rated life at 50,000 hours depending on ballast type and burn cycle
- Operates on any ANSI compliant T8 Instant Start or Programmed Start ballast; also approved on GE UltraStart® PRS ballast
- Excellent color rendering – 80+ CRI
- TCLP compliant, lowering disposal costs where applicable (state regulations vary, consult your state EPA)
- Approximately 10% less light

GE Ultra Energy Saving T8 Lamps T8 28W UltraMax® (pg 4-11)

- Highly efficient T8 system utilizing the new 28W T8 lamp designed for optimal use on the GE UltraMax® ballast product family
- Operates on any ANSI compliant T8 Instant Start or Programmed Start ballast
- Also approved for use on GE UltraStart® PRS ballast
- 80+ CRI (Color Rendering Index) and TCLP compliant
- Approximately 4% less light

GE Ultra Energy Saving T8 Lamps T8 32W High Lumen Lamps (HL) (pg 4-11)

- 5-8% more lumens than GE 32W T8 SP and SPX
- 3100 initial lumens allows you to increase light levels over a standard T8 or the option to implement a de-lamp or de-fixture strategy
- 33% longer life over GE F32T8
- 80+ CRI (Color Rendering Index) and TCLP compliant

GE 8' T8 Lamps (pg 4-11 to 4-12)

- Single-pin based lamps designed to operate on Instant Start Ballast

GE 8' T8 Watt-Miser® Plus and 49W Energy Saving Lamps (pg 4-11)

- One of the most efficient fluorescent products available, up to 107 LPW
- Energy savings...8.5% to 17% less energy consumed than standard F96T8 lamps
- Watt-Miser® Plus has same light output as standard lamps; 49W is approximately 14% less light
- Excellent color rendering – 80+ CRI
- Watt-Miser® Plus lamp reduces wattage to 54W per lamp

GE 8' T8 High Output Lamps (pg 4-12)

- High system efficiency delivers 38% energy cost savings
- 50% longer life than T12 high output lamps
- Wide choice of color options
- Operate at 400mA

Fluorescent Lamps

Product Information (continued)

GE T8 Mod-U-Line® U-Shaped Fluorescent Lamps (pg 4-12)

- Primarily used in 2x2 fixtures with prismatic or parabolic lenses
- Lower energy cost...36% energy cost savings vs. F40T12 U-Tubes
- New Watt-Miser® version saves even more money!
- Longer lamp life than T12 Mod-U-Line® – 20,000 hours
- 700 and 800 Series

GE Energy Saving Mod-U-Line® U-Shaped Fluorescent Lamps (pg 4-12)

- Primarily used in 2x2 fixtures with prismatic or parabolic lenses
- Relamp existing F31T8 Mod-U-Line® with F29T8 or F26T8 Mod-U-Line® and save up to 16% in energy
- Longer lamp life than T12 Mod-U-Line® – 24,000 hours
- Approximately 8 to 17% less light

GE 4' T12 Watt-Miser® Ecolux® Energy Saving Lamps (WM) (pg 4-14)

- Energy-saving replacement for all standard T12 fluorescent lamps
- 12% to 20% savings in energy costs vs. standard fluorescent with approximately 15% light loss
- TCLP compliant, lowering disposal costs where applicable (state and local regulations vary, consult your state EPA)

GE T12 High Output Lamps (pg 4-15 to 4-16)

- High light output and long life
- Produces about 45% more initial lumens than standard lamps of the same size
- Usually operated at 800mA

GE T12 Very High Output Lamps (pg 4-16)

- Where high light levels are required – factories, warehouses, gymnasiums, open areas
- Rapid Start, operated at 1500mA

covRguard® Shatter Resistant Fluorescent Lamps (pg 4-17)

- Polycarbonate shield helps to contain shattered glass particles if lamp is broken, protecting people, food and other valuable items
- UV-blocking properties guard against fading and UV degradation
- Available in a variety of colors for decorative and architectural applications

GE Cold-Temperature Lamps (pg 4-19)

- Specifically designed for cold-temperature applications such as freezers and coolers, display cases and outdoor areas
- Available in T5, T8, T10 and T12 versions
- Rated nominal watts and initial lumens are peak values. Actual watt and lumen values may be somewhat lower in service, depending on ambient conditions.

GE Appliance Lamps (pg 4-20)

- Designed for intermittent service in appliances such as oven hoods and microwaves

GE Blacklight/Blacklight Blue Lamps (pg 4-20)

- Blacklight (BL) lamps are commonly used in insect traps
- Blacklight Blue (BLB) lamps are often used decoratively in disco lighting and theatrical applications. These lamps are produced with a special dark blue glass that filters most visible light.

GE Gold Lamps (pg 4-21)

- Effectively blocks all UV emissions below 520nm
- Available in covRguard®
- Used in photo-sensitive applications such as semi-conductor assembly and darkrooms

GE Germicidal Lamps (pg 4-21)

- Clear lamps with special UV transmitting glass
- The 254nm radiation from appropriately designed and installed devices using the lamps can inactivate many forms of bacteria and other organisms
- Used in air, water and surface purification devices

Headings in this catalog section

The following terms and descriptions can help you when checking Fluorescent lamp specifications and when ordering products. Within each product line, lamps are divided into families, within these

families, lamps are then listed by wattage, then bulb, and then by base. There are exceptions to this ordering among the specialty lamps listed.

Order Code:

It is important to use this five-digit code when ordering to ensure that you receive the exact product you require.

Nominal Length (in):

Lamp length including base and/or pins.

Watts:

Energy used (as defined by FTC Lamp Label Rules). To estimate energy consumption (kWh), multiply watts x hours of use and divide by 1000.

Bulb Shape:

Bulb shape followed by its size (the maximum diameter of the bulb expressed in eighths of an inch).

Base:
The type of base.

Description:
The lamp's identification code.

Case Quantity:
Number of product units packed in a case.

Rated Life - Hours:
Lamp burning hours to median life expectancy.

Initial Lumens:
Lamp light output after the initial 100 hours of operation.

Mean Lumens:
Lamp light output at 40% of rated lamp life or 8K hours for lamps exceeding 20K hours life.

Color Temperature Kelvins (K):

A measure of the visual "warmth" or "coolness" of the light from the lamp. The higher the value, the whiter or "cooler" the light appears.

Color Rendering Index (CRI or R_a):

An indication of the ability of the lamp to render object colors in a normal, natural way. The higher the number (0-100), the better the color appearance.

High Color Rendering:

Indicates that this is a lamp with high color rendering, which helps objects and persons illuminated to appear more true to life.

Reduced Wattage:

Indicates that this is a reduced wattage option for lamps normally used in this application. Be sure to check wattage, lumens and life to determine which lamp is best suited to your needs.

Warning and Caution Notices:

See page 4-27 for more information.

Footnotes:

Related footnotes, see page 4-26

Additional Information:

Typical application and/or other important information.

| Bulb Shape | Base | Watts | Nominal Length (in) | Order Code | Description | Case Qty | Rated Life (3hr/Start) | Rated Life (12hr/Start) | Initial Lumens | Mean Lumens | Color Temp K | CRI | High Color Rendering | Energy Savings | Reduced Wattage | Footnotes | Warning and Caution Notices | Additional Information |

F 14W/T5/830 / ECO

Identifies as Fluorescent lamp.

Identifies either the lamp's wattage or its length in inches.

Identifies the lamp shape and the bulb diameter in eighths of an inch.

Identifies the lamp finish or color.

Identifies TCLP compliance.

WHEN YOU DON'T KNOW THE LAMP DESCRIPTION

1. Identify bulb shape by using table on page 4-3.
2. Measure bulb diameter using ruler in Appendix section page D-1 to determine width in eighths of an inch.
3. Identify base type using table on page 4-4.
4. Find your lamp in the table containing the bulb shape, size and base.

Operating Notes

General Operation

GE fluorescent lamps should be used only with auxiliary equipment designed to produce proper characteristics. Specifications for auxiliary equipment are covered by ANSI. Specifications for auxiliary equipment not included in ANSI Standards are available from GE Lighting.

Factors Affecting Lamp Performance

Ballasts

The three basic types of ballasts for fluorescent lamps are Preheat (PH), Instant Start (IS), and Rapid Start (RS). In general, lamps identified as preheat, rapid start or instant start should be used only on the corresponding ballast type. Electronic ballasts are presently available in both instant start and rapid start designs. Ballasts that operate with output currents below recommended levels, either by design or poor performance, will reduce fluorescent lamp life.

Application – Choosing the appropriate ballast for an application can have an impact on lamp life. For example, T8 lamps with electronic Instant Start ballasts should not be used in applications with electronic controls (such as occupancy sensors). The frequent switching will significantly reduce lamp life. Use only programmed rapid start ballasts in these situations.

Operating Characteristics – Fluorescent lamp life is strongly affected by the ballast. ANSI has set standards for fluorescent ballasts that will ensure proper operation of fluorescent lamps. Ballast characteristics that have a significant effect on lamp life are Current Crest Factor, Starting Time, Cathode Voltage and Open Circuit Voltage.

Ballast Factor – This is the percentage of a lamp's rated lumen output that can be expected when operated on a specific, commercially available ballast under laboratory conditions. For example, a ballast having a ballast factor of 0.93 will result in the lamp emitting 93% of its rated lumen output.

High Frequency – All fluorescent lamps operate more efficiently when driven at frequencies greater than 15 kHz. Four-foot fluorescent lamps operate approximately 10% more efficiently, while eight-foot lamps improve efficiency by about 5%. This efficiency improvement is one reason for the popularity of electronic ballasts.

Temperature

Light output and watts of a fluorescent lamp are affected by the ambient temperature, and by drafts. Most fluorescent lamps reach their maximum light output at room temperatures or at "luminaire temperatures." All-Weather fluorescent lamps are designed with jackets that improve performance in low-temperature environments.

Luminaire

The design of the lighting fixture (luminaire) affects the ambient temperature in which the fluorescent lamps will be operating. A fixture that operates too cool or warm will result in lower light output from the lamps and reduce illumination levels.

Starting

The life of a fluorescent lamp is affected by the number of times the lamp is started. Starting results in shorter lamp life, while continuous operation will provide the longest lamp life. All fluorescent lamps, except where noted, have life ratings based on three hours per start.

General Information

Lumens

Nominal Initial Lumens refer to the nominal light output of the lamp after 100 hours of operation at 25° C. **Nominal Mean Lumens** refer to the nominal light output of the lamp at 40% of its rated life. Some values are based on engineering calculations derived from extrapolation of initial measured lumens.

A self-ballasted lamp is measured using its integral ballast. Lamps without an integral ballast are measured using reference ballasts.

Lumens produced by lamps operated on commercial ballasts may not be equivalent to reference ballast ratings. For lighting design calculations, refer to the ballast manufacturer's published data for the appropriate "Ballast Factor."

Nominal Watts

Wattage is classified in accordance with American National Standards Institute standards for lamp classification purposes and may not be the same as the wattage run on a reference ballast. The nominal wattage as defined by ANSI may vary from the listed wattage. Watts consumed by lamps operated on commercial ballasts may not be equivalent to reference ballast ratings.

Rated Life

The rated life (hours) is the approximate median life when lamps are operated for three hours per start under laboratory conditions using an ANSI reference ballast or GE Lighting specifications where no industry standards exist. Some lamps are rated at 12 hours per start where noted.

Performance Notes:

T8 Lamps:

- Rated life for 2 ft through 4 ft. Starcoat® Ecolux® Medium Bi-Pin T8 Lamps is Rated life on programmed rapid start circuits.
- Rated life for the F40T8 is rated life on rapid start circuits. Rated life for these linear lamps on instant start electronic circuits is reduced by 25%.

T12 Lamps:

- Life of 4' T12 lamps on single-lamp, rapid start ballasts may be reduced.

Color Temperature/Chromaticity

Approximate color temperature of fluorescent is measured using industry standard methods and is based on a nominal 40-watt source. Fluorescent sources operating at different lamp currents will have slightly shifted color appearances when compared to the corresponding 40-watt sources.

Scotopic/Photopic Ratio

This measurement accounts for the fact that of the two light sensors in the retina, rods are more sensitive to blue light (Scotopic Vision) and cones to yellow light (Photopic Vision). The Scotopic/Photopic (S/P) Ratio is an attempt to capture the relative strengths of these two responses. S/P is calculated as the ratio of scotopic lumens to photopic lumens, for the light source, on an ANSI reference ballast. Cooler sources (higher color temperature lamps) tend to have higher values of the S/P Ratio compared to warm sources.

Fluorescent Lamps

Scotopic/Photopic (S/P) Ratio:

This measurement accounts for the fact that of the two light sensors in the retina, rods are more sensitive to blue light (Scotopic vision) and cones to yellow light (Photopic vision). The Scotopic/Photopic (S/P) Ratio is an attempt to capture the relative strengths of these two responses. Cooler sources (higher color temperature lamps) tend to have higher values of the S/P Ratio compared to warm sources.

Footnotes

- 1 Watt-Miser®, Watt-Miser® Plus, F28T8, F32T8/25W and Energy Efficient (EE) lamps are intended for use where ambient temperatures are 60°F (16°C) or higher and where the lamp surface is protected from strong air drafts. Failure to protect the lamp surface may result in reduced life, poor starting or erratic operation, such as flickering or spiraling. These lamps are not recommended for use with dimming systems. All T12 Watt-Miser® lamps are intended for use on two-lamp, indoor, lead, high power factor ballasts and are not recommended for use with dimming or reduced current systems. The use of T12 Watt-Miser® lamps on single lamp ballasts may shorten lamp life. T12 Rapid Start Watt-Miser® lamps are intended for use only with Rapid Start Ballasts. F34 Rapid Start Watt-Miser® lamps on high frequency electronic systems may display erratic starting before end of life. T8 Watt-Miser® lamps and F28UMX lamps are intended for use only with instant start ballasts. They are, however, also approved for use on GE UltraStart® programmed rapid start ballasts.
- 2 F40T17/CW/IS lamps are for use only in fixtures equipped with instant start ballasts.
- 3 Because Power Groove® and Very High Output lamps are most used in commercial applications, the life rating is based on 12 hrs. per start.
- 4 Bare "Cold Temperature" lamps (as indicated by /CT) and "All Temperature" lamps are designed for use where ambient temperatures drop below 60°F (16°C).
- 5 Performance data based on engineering estimates.
- 6 **CAUTION:** Risk Group 1 (Low Risk): UV emitted from this lamp. Skin or eye irritation could result. Minimize exposure.
- 7 **WARNING:** Risk Group 3 (High Risk): UV emitted from this lamp. Avoid exposure of eyes and skin to unshielded lamp. Skin or eye injury will result.
- 8 Shoplites are not recommended to be used on F40 full light output ballasts. Life will be reduced by approximately 50%.
- 9 Lumen rating based on approximate 3% reduction in light output with covRguard® sleeving.
- 10 Do not use covRguard® HO lamps in watertight or airtight fixtures.
- 11 Blocks 100% of UV-B and UV-C. Blocks from 75 to 99% of UV-A, depending on lamp type.
- 12 Life rating is based on 12 hrs. per start.
- 13 Lumen rating based on approximate 3% reduction in light output with jacket.
- 14 Life rating is based on UV maintenance curve and is measured at 80% of initial (100hr) UVC output.
- 15 Jacketed "Cold Temperature" lamps (as indicated by -CT) are designed for use where ambient temperatures do not rise above 32°F (0°C).
- 16 T8 lamps run on Instant Start ballasts should not be used in conjunction with electronic controls such as occupancy sensors. The frequent switching will significantly impact lamp life and void any warranties. Programmed Rapid Start ballasts such as GE's UltraStart® ballast should be used in these situations.
- 17 T5 Starcoat® Ecolux® lamp initial and mean lumen ratings are taken at 95°F (35°C)
- 18 Rated life is given for programmed start ballasts. Life ratings are based on engineering data with lamps cycled every 3 or 12 operating hours. Lamp life is approximately 25% shorter on instant start ballasts as compared to programmed start ballasts.
- 19 Rated life is given for programmed start ballasts. Life ratings are based on engineering data with lamps cycled every 3 or 12 operating hours. See chart on page 4-4 for more details.

Warning and Caution Notices

101

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal

⚠ CAUTION

Lamp may shatter and cause injury if broken

- Wear safety glasses and gloves when handling lamp
- Do not use excessive force when installing lamp

102

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal

⚠ CAUTION

Improper handling may cause breakage

- Do not carry lamp by bracket

Lamp may shatter and cause injury if broken

- Wear safety glasses and gloves when handling lamp
- Do not use excessive force when installing lamp

103

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal

104

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal
- Avoid direct water/liquid contact

⚠ CAUTION

Lamp may shatter and cause injury if broken

- Wear safety glasses and gloves when handling lamp
- Do not use excessive force when installing lamp

105

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal

⚠ CAUTION

Lamp emits UV radiation which may cause eye/skin irritation. RG-1

- Minimize exposure

Lamp may shatter and cause injury if broken

- Wear safety glasses and gloves when handling lamp
- Do not use excessive force when installing lamp

106

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal

Lamp emits UV radiation which may cause eye/skin injury. RG-3

- Avoid exposure of eyes and skin to unshielded lamp

⚠ CAUTION

Lamp may shatter and cause injury if broken

- Wear safety glasses and gloves when handling lamp
- Do not use excessive force when installing lamp

107

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal
- Do not open – there are no serviceable parts inside
- Do not drill or cut into plastic parts
- Avoid direct water/liquid contact
- Fully insert plug
- Use indoors only

⚠ CAUTION

Lamp may shatter and cause injury if broken

- Wear safety glasses and gloves when handling lamp
- Lamp is not replaceable. Do not attempt to remove lamp from fixture
- Use in permanent installation only – not for portable use

Unit will fail if not installed properly

- Follow installation instructions

108

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal
- Avoid direct water/liquid contact

Bulb Identification

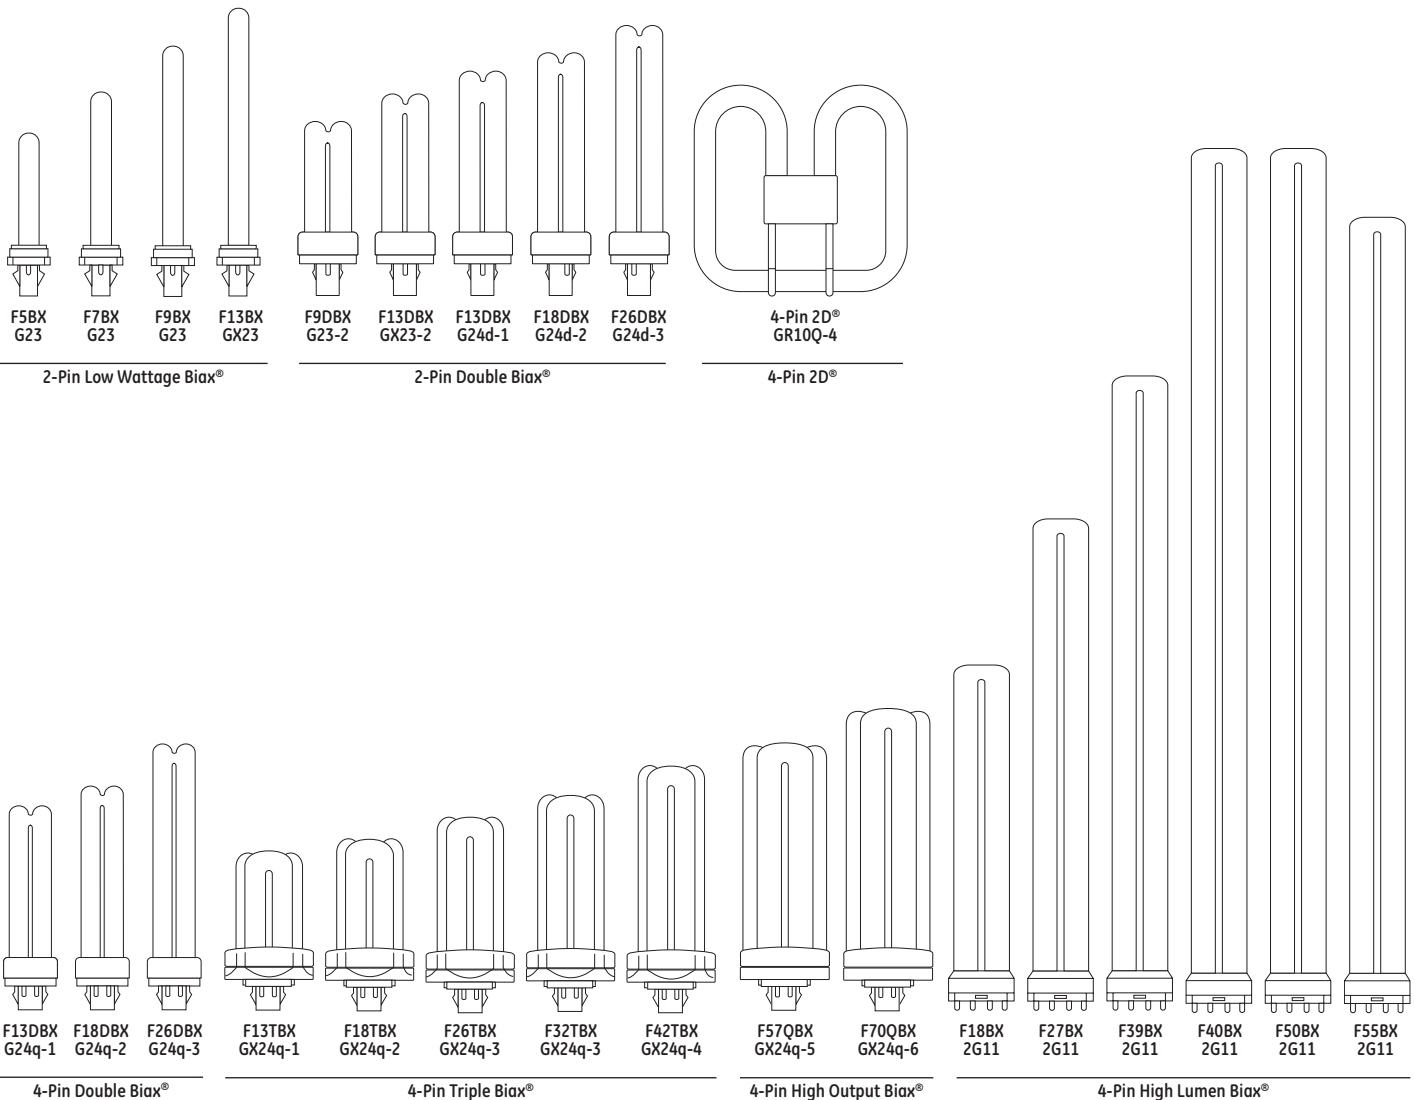

NOMINAL LENGTH:

Overall length including base or pins.

Note: Lamp drawings are not drawn to scale. Be sure to check size and dimension information when identifying each lamp.

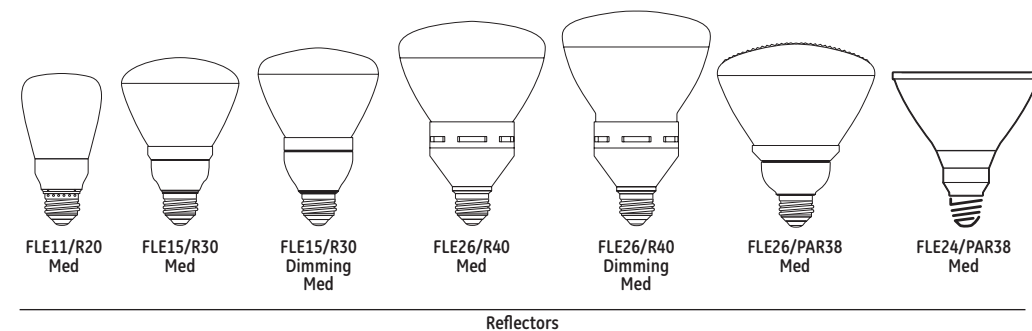

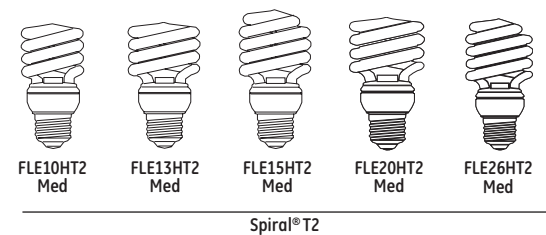

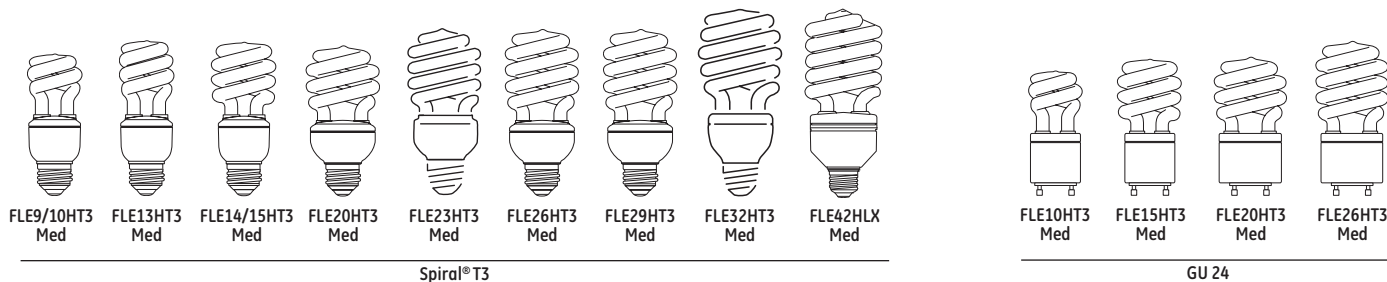

To convert inches to millimeters, multiply the dimension (in inches) by 25.4 (i.e. 1.5" x 25.4 = 38.1 mm).

Base Identification

Introduction

GE Compact Fluorescent lamps offer many advantages:

- Dramatic energy cost savings...up to 77% vs. incandescent lamps of comparable light output
- Extra long life...most last 8 to 10 times longer, and some last up to 20 times longer, than standard incandescent lamps
- High light output comparable to, and in many cases exceeding, incandescent lamps replaced
- Excellent color rendering...rare earth tri-phosphor provides such high-quality color you won't believe it's fluorescent. Most types offer a choice of color options, from warm to cool, to let you select the tone and atmosphere you need.
- A choice of wattages, shapes and sizes to meet your lighting needs. Designed to fit everything from table lamps to wall sconces and ceiling fixtures.
- Many lamps use amalgam technology which provides stable lumen performance when operated in any position, over a wider range of ambient temperatures.

Compact Fluorescent Brand Name Cross-Reference

| GE | OSRAM/SYLVANIA | PHILIPS |
|-------------------|-----------------|----------|
| 2D® | — | — |
| Biax® | Dulux® S | PL-S |
| High Lumen Biax® | Dulux® L | PL-L |
| Double Biax® | Dulux® D, D/E | PL-C |
| Triple Biax® | Dulux® T/E | PL-T |
| Quad Biax® | — | — |
| High Output Biax® | — | PL-H |
| Spiral® | Dulux® EL Twist | EL Twist |

ATTENTION: This brand-name cross-reference chart is provided only as a quick reference. Other lamp company brand listings may only represent a near equivalent, versus an identical match to GE Lighting brands. Individual lamp manufacturers' performance specifications should be consulted. Lamp performance may be affected by environmental conditions, ballast type and/or other auxiliary equipment.

Product Information

Plug-in Lamps

2-Pin Low Wattage Biax® (pg 5-7)

- Compact size offers fixture and design flexibility
- GX23 and G23 bases are preheat lamps with internal starters
- 13-watt version also available with internal electronic starter, providing flicker-free instant on
- Available in warm and cool color temperatures
- TCLP Compliant

4-Pin High Lumen Biax® (pg 5-7)

- Available in a range of sizes and wattages for innovative compact luminaires
- High efficiency and outstanding performance in fixtures make them ideal for 2X2, 1X1 and indirect fixtures
- Available in warm to cool color temperatures; excellent color rendering

2-Pin Double Biax® (pg 5-8)

- More compact than low-wattage Biax® CFLs with higher lumen output—suitable for a broad range of applications
- Preheat lamps with starters; not suitable for use with dimming ballasts
- 26-watt version also available with internal electronic starter, providing flicker-free instant on
- Available in warm to cool color temperatures
- TCLP Compliant

4-Pin Double Biax® (pg 5-8)

- More compact than low-wattage Biax® CFLs with higher lumen output—suitable for a broad range of applications
- Dimmable and compatible with electronic ballasts
- Available in warm to cool color temperatures
- TCLP Compliant

4-Pin Triple Biax® (pg 5-8)

- GE's shortest, most compact Biax® lamp. 17-31% shorter than similar wattage Double Biax® lamps.
- 4-Pin, dimmable and compatible with electronic ballasts
- Available in a wide range of wattages: from 13 to 42 watts
- Available in warm to cool color temperatures
- TCLP Compliant

4-Pin High Output Biax® (pg 5-9)

- GE's highest light output compact fluorescent lamps
- High efficacy 72-75 LPW
- Dimmable, available in 5 colors (2,700 to 5,000K)
- Suitable for high-bay lighting
- TCLP Compliant

4-Pin 2D® (pg 5-9)

- Unique shape suitable for broad range of applications
- Uniform light distribution
- High light output – up to 200W incandescent equivalent

Self-Ballasted Lamps

Spiral® (pg 5-11)

- Long life – up to 12,000 hours or more
- One-piece unit screws directly into incandescent sockets
- Wide variety of wattages to meet application needs
- T2 & T3 Spiral® CFLs provide economical solution with small overall size
- The 42-watt T4 Spiral® CFL provides a 150W incandescent replacement in the smallest possible size (fits an 8.5" harp)
- Color-enhanced CFL Reveal® mimics the color of incandescent and halogen Reveal® lamps

3-Way (pg 5-12)

- T3 and T4 lamps available

GU 24 (pg 5-12)

- Long life – 10,000 hour rating
- Simple twist and lock design allows quick and easy lamp change
- Fits all fixtures with GU 24 base

Reflectors/Indoor PAR (pg 5-12)

- R20, R30, R40 and PAR38 glass reflectors available to meet application needs
- Medium based; fits most incandescent reflector applications
- R30 and R40 lamps available with dimming functionality

Decorative Shapes (pg 5-13)

- Variety of shapes (A-Line, Bullet, Candle, Globe, and Post) and wattages to meet all needs
- One-piece unit screws directly into incandescent sockets
- Candle-shaped CFLs available in both medium base and candelabra base

Specialty (pg 5-14)

- T3 13-watt Spiral® CFLs are available in green, red, blacklight, orange, yellow and blue

WHEN YOU DON'T KNOW THE LAMP DESCRIPTION

1. Identify bulb shape next to lamp information.
2. Measure bulb diameter using ruler in appendix section page D-1 to determine width in eighths of an inch.
3. Identify base type using table on page 5-4.
4. Find your lamp in the table containing the bulb shape, size and base.

Footnotes

- 1 Fluorescent lamp lumens decline during life.
- 2 Based on 60Hz reference circuit.
- 3  10-watt, 16-watt and 28-watt 2D® lamps may be operated in any position. 21-watt, 38-watt, 39-watt and 55-watt 2D® lamps must be used with the leg marked (a) in the diagram below the bend (b), in order to avoid overheating the end of the cap marked (c).
- 4 Life ratings for the F18BX preheat lamps are based on operating the lamp at 3 hrs. per start on a preheat type circuit. Operation on rapid start and instant start ballasts is not recommended.
- 5 Cold cathode resistance is approximately 6.0 Ohms.
- 6 4-Pin lamp minimum starting temperature is a function of the ballast. Most ballasts are rated with a minimum starting temperature of 50°F (10°C). Ballasts are also available that provide reliable starting to 0°F (-18°C) and -20°F (-29°C).
- 7 Most one-piece self-ballasted lamps for incandescent sockets and plug-in lamps with screw-in adapters do not work with clip-on shades.
- 8 Lumens on one-piece self-ballasted lamp systems are measured base up.
- 9 Best performance if operated base up and at 77°F (25°C) ambient temperature.
- 10 Use only on 120V, 60Hz circuits. Do not use on dimming circuits, photocells or timers. Do not use in wet locations.
- 11 Adapters rated at 40,000 hours life.
- 12 Amalgam products experience stable brightness over a wider temperature range and in various operating positions.
- 13 Life ratings are based on operating the lamp at 3 hrs. per start on a rapid start type ballast. Life rating on a preheat or instant start ballast is 25% lower.
- 14 Use only on 120V, 60Hz circuits. Do not use on with photocells or timers. Do not use in wet locations.
- 15 These lamps are only recommended for use with single-lamp ballasts or parallel-wired 2-lamp ballasts.
- 16 UL Listed for wet locations. Use only on 120V, 60Hz circuits. Do not use on dimming circuits, photocells or timers.
- 17 Max. bulb wall temperature not to exceed 180°C. Consult GE sales representative for further information.
- 18 Life ratings are based on operating the lamp on a high frequency electronic rapid start type ballast.
- 19 This product complies with Part 18 of the FCC Rules, but may cause interference to radios, televisions, wireless telephones, and remote controls. Avoid placing this product near these devices. If interference occurs, move the product away from the device or plug either into a different outlet. Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45 - 30 MHz. Not intended for use with emergency exit fixtures or lights.
Use only on 120V 60 Hz circuits.
When using CFL with motion sensor, preset "on" time on the device as long as possible to avoid frequent switching. (Otherwise lamp life will be decreased significantly)
- 20 Not intended for use with dimmers. Some electronic timer and photosensor devices contain dimming circuitry, so before using them, check with its manufacturer to ensure compatibility with CFL bulbs.

21 RISK OF ELECTRICK SHOCK

DO NOT USE WHERE DIRECTLY EXPOSED TO WATER

Do not open - no user serviceable parts inside

22 Lamp may shatter and cause injury if broken

Remove and install by grasping only plastic portion of the lamp

23 SUITABLE FOR WET LOCATION

24 SUITABLE FOR USE IN ENCLOSED LUMINAIRES

25 NOT FOR USE IN ENCLOSED FIXTURE

Caution Notices

Lamp may shatter and cause injury if broken

- Remove and install by grasping only plastic portion of the lamp

This product complies with Part 18 of the FCC Rules, but may cause interference to radios, televisions, wireless telephones, and remote controls. Avoid placing this product near these devices. If interference occurs, move the product away from the device or plug either into a different outlet. Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45 - 30 MHz. Not intended for use with emergency exit fixtures or lights, or with dimmers. Not for use in enclosed fixtures.

GE2000-0951

⚠ CAUTION

Risk of electric shock

- Do not use where directly exposed to water
- Do not open—no user serviceable parts inside

Lamp may shatter and cause injury if broken

- Remove and install by grasping only plastic portion of the lamp

This product complies with Part 18 of the FCC Rules, but may cause interference to radios, televisions, wireless telephones, and remote controls. Avoid placing this product near these devices. If interference occurs, move the product away from the device or plug either into a different outlet. Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45 - 30 MHz. Not intended for use with emergency exit fixtures or lights, or with dimmers. Not for use in enclosed fixtures.

Compact Fluorescent Lamps

Caution Notices (continued)

GE2000-2709

⚠ CAUTION

Risk of electric shock

- Do not use where directly exposed to water
- Do not open - no user serviceable parts inside

Lamp may shatter and cause injury if broken

- Remove and install by grasping only plastic portion of the lamp

This product complies with Part 18 of the FCC Rules, but may cause interference to radios, televisions, wireless telephones, and remote controls. Avoid placing this product near these devices. If interference occurs, move the product away from the device or plug either into a different outlet. Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45 - 30 MHz. Not intended for use with emergency exit fixtures or lights, or with dimmers. Not for use in enclosed fixtures.

GE2000-2946

⚠ CAUTION

Risk of electric shock

- Do not open—no user serviceable parts inside
- Do not use where directly exposed to water or outdoors without an enclosed fixture

This product complies with Part 18 of the FCC Rules, but may cause interference to radios, televisions, wireless telephones, and remote controls. Avoid placing this product near these devices. If interference occurs, move the product away from the device or plug either into a different outlet. Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45-30 MHz. Not intended for use with emergency exit fixtures or lights, electronic timers, photocells, or with dimmers.

GE2010-3449

⚠ CAUTION

Risk of electric shock

- Do not use where directly exposed to water
- Do not open—no user serviceable parts inside
- Use indoors only

Lamp may shatter and cause injury if broken

- Remove and install by grasping only plastic portion of the lamp

This product complies with Part 18 of the FCC Rules, but may cause interference to radios, televisions, wireless telephones, and remote controls. Avoid placing this product near these devices. If interference occurs, move the product away from the device or plug either into a different outlet. Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45-30 MHz. Not intended for use with emergency exit fixtures or lights, in totally enclosed recessed fixtures, or with dimmers. Added weight may cause instability of free-standing portable lamps. Use only with portable lamps in which the distance from the bottom of the base to the top of the lamp holder does not exceed three times the base width. Use only with portable lamps which are provided with lamp shades.

Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45 - 30 MHz. Not intended for use with emergency exit fixtures or lights, or with dimmers. Not for use in enclosed fixtures.

GE2023-6025

⚠ CAUTION

Risk of electric shock

- Do not use where directly exposed to water
- Do not open - no user serviceable parts inside

This product complies with Part 18 of the FCC Rules, but may cause interference to radios, televisions, wireless telephones, and remote controls. Avoid placing this product near these devices. If interference occurs, move the product away from the device or plug either into a different outlet. Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45 - 30 MHz. Not intended for use with emergency exit fixtures or lights, or with dimmers. Not for use in enclosed fixtures.

GE2024-7455

⚠ CAUTION

Risk of electric shock

- Do not use where directly exposed to water
- Do not open - no user serviceable parts inside

This product complies with Part 18 of the FCC Rules, but may cause interference to radios, televisions, wireless telephones, and remote controls. Avoid placing this product near these devices. If interference occurs, move the product away from the device or plug either into a different outlet. Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45 - 30 MHz. Not intended for use with emergency exit fixtures or lights, or with dimmers.

GE2024-7456

⚠ CAUTION

Risk of electric shock

- Do not open—no user serviceable parts inside
- Do not use where directly exposed to water or outdoors without an enclosed fixture

This product complies with Part 18 of the FCC Rules, but may cause interference to radios, televisions, wireless telephones, and remote controls. Avoid placing this product near these devices. If interference occurs, move the product away from the device or plug either into a different outlet. Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45-30 MHz. Not intended for use with emergency exit fixtures or lights, electronic timers, photocells, dimmers, or in totally enclosed recessed fixtures.

GE2025-1509

⚠ CAUTION

Risk of electric shock

- Do not use where directly exposed to water
- Do not open - no user serviceable parts inside

This product complies with Part 18 of the FCC Rules, but may cause interference to radios, televisions, wireless telephones, and remote controls. Avoid placing this product near these devices. If interference occurs, move the product away from the device or plug either into a different outlet. Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45 - 30 MHz. Not intended for use with emergency exit fixtures or lights. Performance ratings are based on base up orientation.

Do not operate this product in ambient temperatures exceeding xx°C

LED Lamps, Tubes and Modules

Introduction

A GE scientist invented the first visible LED in 1962, pioneering a technology that is revolutionizing the lighting industry. GE is also one of the largest LED systems companies in the world. But it's not only about size. We're dedicated to LED performance on your behalf. That's why we are helping to develop a universal set of performance measures so you can make an informed decision.

Product Information

LED Lamps and Tubes

Quality

The first time you turn on GE LED replacement lamps, you'll be amazed by the color, distribution, output and uniformity. The proof is in your "before and after" environment. In addition, every LED system comes with a product life rating that recognizes acceptable light output for its intended application, ensuring that you won't be left in the dark.

Long Life

GE's LED replacement lamps are sturdy, dependable and long lasting. Depending on the lamp, you can expect up to 50,000 hours of rated life. That's 12 hours a day, every day of the year, for over a decade.

Innovation

We continually invest in new products and are often the first to market with the latest upgrades, including light sources, luminaires and controls for a system that's both efficient and effective.

ENERGY STAR®

In addition to energy savings, ENERGY STAR® qualified LED lamps can further reduce the overall cost of ownership through lamp rebate incentives. Good news for you is that GE has the most ENERGY STAR® rated LEDs. According to ENERGY STAR® guidelines, the benefits of an ENERGY STAR® qualified LED lamp include:

- Uses about 75% less energy than a traditional incandescent lamp
- Lasts at least 6 times longer than an incandescent lamp
- Turns on instantly—there's no warm up time

Total System Solutions

Anyone can install a lamp. What we implement are lighting strategies and solutions. Our products are designed to benefit you from an overall performance perspective.

Proven Track Record

We've been here. We'll be here. Built into each of GE's LED replacement lamps is 125 years of experience, reliability and innovation. Every performance claim we make is supported by stringent, comprehensive testing—ensuring that your lighting investment pays off today and in the future.

Trusted Advisor

From the start, we provide a comprehensive lighting audit of existing systems, provide photometric analysis with 3D renderings of the new system, and forecast energy and maintenance savings. We also search out opportunities for improvement you may not have considered.

Short Payback Period

Decreased energy and maintenance costs, combined with utility rebates, deliver results that often exceed your expectations.

Family of Solutions

Directional. Omni-directional. Decorative. Dimming. Tight optical control. Accent. Task. Display. Indoor. Outdoor. You name it—we've got it in LED.

Infusion™ LED Module

GE Infusion™ is a game-changing technology and one of the most flexible LED lighting solutions on the market. As a designer, OEM, or end-users, you can choose from an extensive selection of modules. Plus, there's the assurance of GE reliability and performance.

- Built for the Future: If lighting needs change or LED technology advances, there is no need to buy new fixtures. Simply twist in the latest GE Infusion™ LED Module.
- Environmentally Conscious: The Infusion™ LED Module can use fewer materials than integral LED fixtures because only the module is replaced at the end of lamp life—not the entire light fixture.
- Customizable: Select the module with the light level or color quality that meets your needs. The Infusion™ LED Module dims using a variety of dimming protocols including 0-10V, Phase and DALI.
- Compatible: Ideal for fixture manufacturers designing for track, recessed, pendant or other types of luminaires around one compatible solution—no need for multiple base designs.

* The life rating is based on the hours of operation the lamp will provide before reaching 70% of its original lumen rating (L70).

** Minimum order quantity = 6

† Incandescent or halogen wattage equivalencies based on Energy Star guidelines using lumens or CBCP according to lamp type

†† Energy Star status: Certified as meeting Energy Star guidelines.

‡ UL 1993 Environmental Requirements for LED Lamps.

Location, damp - Exterior or interior location that is normally or periodically subject to condensation of moisture in, on, or adjacent to electrical equipment, and includes partially protected locations.

Location, dry - Location not normally subject to dampness, may include a location subject to temporary dampness, i.e., building under construction, provided ventilation is adequate to prevent an accumulation of moisture.

Location, wet - Location in which water or other liquid can drip, splash, or flow on or against electrical equipment.

Note: Product descriptions ending in "/TP" indicate a cased blister or clamshell package nested in a tray for shelf display. Cards also designed for hook display.

* The life rating is based on the hours of operation the lamp will provide before reaching 70% of its original lumen rating (L70).

** Minimum order quantity = 6

† Incandescent or halogen wattage equivalencies based on Energy Star guidelines using lumens or CBCP according to lamp type

‡ Energy Star status: Certified as meeting Energy Star guidelines.

‡ UL 1993 Environmental Requirements for LED Lamps.

Location, damp - Exterior or interior location that is normally or periodically subject to condensation of moisture in, on, or adjacent to electrical equipment, and includes partially protected locations.

Location, dry - Location not normally subject to dampness, may include a location subject to temporary dampness, i.e., building under construction, provided ventilation is adequate to prevent an accumulation of moisture.

Location, wet - Location in which water or other liquid can drip, splash, or flow on or against electrical equipment.

Note: Product descriptions ending in "/TP" indicate a carded blister or clamshell package nested in a tray for shelf display. Cards also designed for hook display.

* The life rating is based on the hours of operation the lamp will provide before reaching 70% of its original lumen rating (L70).

** Minimum order quantity = 6

† Incandescent or halogen wattage equivalencies based on Energy Star guidelines using lumens or CBPB according to lamp type

†† Energy Star status: Certified as meeting Energy Star guidelines.

‡ UL 1993 Environmental Requirements for LED Lamps.

Location, damp - Exterior or interior location that is normally or periodically subject to condensation of moisture in, on, or adjacent to electrical equipment, and includes partially protected locations.

Location, dry - Location not normally subject to dampness, may include a location subject to temporary dampness, i.e., building under construction, provided ventilation is adequate to prevent an accumulation of moisture.

Location, wet - Location in which water or other liquid can drip, splash, or flow on or against electrical equipment.

Note: Product descriptions ending in "TTP" indicate a carded blister or clamshell package nested in a tray for shelf display. Cards also designed for hook display.

* The life rating is based on the hours of operation the lamp will provide before reaching 70% of its original lumen rating (L70).

** Minimum order quantity = 6

† Incandescent or halogen wattage equivalencies based on Energy Star guidelines using lumens or CBPB according to lamp type

†† Energy Star status: Certified as meeting Energy Star guidelines.

‡ UL 1993 Environmental Requirements for LED Lamps.

Location, damp - Exterior or interior location that is normally or periodically subject to condensation of moisture in, on, or adjacent to electrical equipment, and includes partially protected locations.

Location, dry - Location not normally subject to dampness, may include a location subject to temporary dampness, i.e., building under construction, provided ventilation is adequate to prevent an accumulation of moisture.

Location, wet - Location in which water or other liquid can drip, splash, or flow on or against electrical equipment.

Note: Product descriptions ending in "/TP" indicate a carded blister or clamshell package nested in a tray for shelf display. Cards also designed for hook display.

¹Lumens are 'hot lumens' measured at steady state at a T_p temperature of 65°C

²Rated life refers to 70% lumen maintenance (L70).

Note: For use in dry location only or in luminaire which is designed and tested to an environmental location appropriate for intended operating conditions.

Bulb Identification

DIA: Diameter of bulb at widest point.
 MOL: Maximum Overall Length including base or pins.
 LCL: Distance between the center of the arc tube and the Light Center Length reference plane.
 Note: Lamp drawings are not drawn to scale. Be sure to check size and dimension information when identifying each lamp.
 To convert inches to millimeters, multiply the dimension (in inches) by 25.4 (i.e. 1.5" x 25.4 = 38.1 mm).

Introduction

GE has been a leading supplier to stage and studio users for many decades, and continues its pioneering work in the development of new and innovative light sources.

The primary change in recent years has been the migration from glass to quartz as the standard bulb material. The higher melting point of quartz enables bulb envelopes to be reduced in size and the halogen fillings to be run at higher pressures, leading to smaller, lighter, brighter, more energy-efficient and more reliable lamps.

GE's comprehensive range of single- and double-ended lamps is complemented by a group of PAR lamps, where the light source is enclosed in a sealed reflector unit.

The beam patterns of PAR lamps range from very narrow spot to wide-angle floods. This ensures consistency from lamp to lamp, interchangeability to suit the beam pattern needs of the moment and instant replaceability without the need to refocus and re-aim fixtures.

The sealed beam design prolongs the life of the inner lamp as well as protecting it from dust, vapor and other hazards, thereby ensuring high lumen maintenance over the life of the lamp.

PAR lamps may be used with very simple, lightweight, economical fixtures.

General Information

Operational Characteristics

Quartz halogen lamps are designed to be operated within close voltage tolerances, and excessive voltage can lead to drastically shortened life, albeit with significantly higher light output.

A second important variable is temperature. The tungsten halogen cycle does not operate properly below about 482°F (250°C) and quartz may begin to devitrify above about 1832°F (1000°C). Bulb envelopes should therefore be held in the range 482-1472°F (250-800°C).

The contact pins are plated to ensure good electrical connection with the lampholder. However, at temperatures above 350°C, the plating may lose adhesion, leading to deterioration in contact and possibly local hot spots, arcing and consequent irreparable damage to both lamp and holder. Note that if there is evidence that this has occurred, the lampholder should be replaced before the next lamp is fitted, otherwise it is likely to fail prematurely for the same reason.

Lamps normally fail by fusing of the filament. This is often followed by arcing, leading to very high currents which can cause the envelope and seals to fail and the lamp to shatter. A quick-acting, high-breaking capacity fuse should therefore be connected to the supply line in all applications. Suitable types are given in IEC 127, 241 and 269.

Chromised Seal Protection

Many Quartzline® Stage/Studio lamps have a special chromised seal protection, which allows lamp seal temperatures up to 500° C (vs traditional 350° C), which increases life and reliability.

If the package does not have this seal, lamp base temperatures for Quartzline® lamps should not exceed 350°C because, above that point, lead wires in the sealing area will deteriorate, and base cement can loosen, both causing premature lamp failure. Note overvoltageing a lamp will increase the seal heat.

Lamp Codes

GE Stage & Studio lamps are coded as such:

Lamp Description. This may be either an American National Standards Institute (ANSI) three-letter code such as EJJ, or a descriptive code in the general form Q750T3/4CL. ANSI codes are assigned to lamp specifications—mechanical, electrical and photometric characteristics—filed with the Institute.

They ensure interchangeability among similarly coded lamps from different manufacturers. Most of these lamps are rated for 120-volt operation. In a few cases a pair of ANSI codes are given (e.g. BFL/BFK), where the first is the official code for the lamp and the second code describes lamps the specifications of which are met or exceeded. In such cases, the lamps may be used to replace lamps with either code.

Base designations conform to IEC standards.

Product Information

GE CSR/CSD Metal Halide Lamps

New GE range of metal halide lamps for use in a variety of applications including TV and film, stage, concerts, photographic and large-screen presentation and color simulation.

- Excellent color rendering Ra >90
- Daylight color temperature, typically 6000K
- Universal burning position
- High efficiency up to 100 Lm/Watt
- Hot restrike and dimmable with stable color temperature
- Superior color stability
- Excellent lumen maintenance
- Use with electronic or AC magnetic ballast/ignitor control gear
- Applications include inside and outside TV and film production, stage, concerts, sporting events, photographic studios, overhead and large-screen projection and color simulation.

GE Cinema Fluorescent Lamps

- High CRI (Color Rendering Index)...traditional fluorescent lamps have not been widely used in photography and film making because of relatively low CRI and the prominent green spike found in typical fluorescent phosphors. GE Lighting Cinema 32 and Cinema 55 lamps have corrected these deficiencies with products that now have a CRI of 95 (out of 100 max.) and colors that respond to the spectral sensitivity curves of film and electronic imaging media.
- Optional Shatter Resistance...GE Cinema 32 and 55 offer the option of GE's exclusive *covRguard*® shatter resistance that helps contain glass fragments if the lamps are broken. Reduce the possibility of glass-related injuries to irreplaceable talent, damage to expensive sets, contamination of delicate equipment or missing critical deadlines because GE offers shatter resistance. GE's *covRguard*® process wraps the Cinema lamps in a full 15-ml-thick casing of GE's exclusive Lexan® polycarbonate that helps contain the glass, phosphor and chemicals if the lamp is broken. Unlike some other shatter-resistant lamps, GE's *covRguard*® lamps require no assembly.

Stage and Studio Lamps

Product Information (continued)

- Superior Light Output...the GE covRguard® process offers maximum protection with minimal light loss...the lowest loss of initial light of other shielded products.
- Dependable UV Blocking...the GE covRguard® process also offers excellent UV blocking. CovRguard® blocks 98% of the UV that is normally transmitted from an unprotected fluorescent lamp—all UVC, all UVB and most of UVA. This is critical for protecting expensive sets and wardrobe from the fading effects of UV exposure.

- Chromaticity...the Cinema 32 has a chromaticity of X=.415 and Y=.377 with a CRI of 95. The Cinema 32 mixes well with both incandescent and quartz halogen light sources without color corrections. The Cinema 55 is a broad band spectrum daylight lamp with a chromaticity of X=.325 and Y=.321 and a CRI of 96. The Cinema 55 mixes well with ambient daylight and short arc discharge HID light sources without color corrections.

For more detailed information on all GE Stage and Studio lighting order "Showbiz" 2008, PC 72475 from your GE sales representative.

Headings in this catalog section

The following terms and descriptions can help you when checking Stage/Studio lamp specifications and when ordering products. Within each product line, lamps are divided into families, within these families, lamps are then listed by wattage.

| | | | |
|---|--|---|--|
| Watts: Energy used. To find actual energy used (kWh) multiply power (watts shown) x time divided by 1000. | LIF Code: These are assigned by the Lighting Federation of London, U.K. They ensure electrical and mechanical interchangeability of similarly coded lamps. LIF codes are divided into groups according to the primary application of the lamps. | Approximate MBCP (Maximum Beam Candlepower): For reflector type lamps. Center Beam Candlepower is the intensity (candelas) at the center or maximum intensity of the beam. | Filament Type: Filaments are designated by a letter combination in which C is a coiled wire filament, CC is a coiled wire that is itself wound into a larger coil, and SR is a straight ribbon filament. Numbers represent the type of filament-support arrangement. |
| Bulb Shape: Bulb shape followed by its size (the maximum diameter of the bulb expressed in eighths of an inch). | Description: The lamp's identification code. | Design Color Temperature – Kelvins (K): A measure of the visual "warmth" or "coolness" of the light from the lamp. The higher the value, the whiter or "cooler" the light appears. | MOL (in): Maximum Overall Length in inches. |
| Base: The type of base (ANSI). | ANSI Codes: These are 3-letter codes assigned by the American National Standards Institute. They provide a system of assuring mechanical and electrical interchangeability among similarly coded lamps from various manufacturers. General Electric uses the assigned ANSI Codes as Lamp Ordering Codes for most Projection Lamps. | Color Rendering Index (CRI): An indication of the ability of the lamp to render object colors in a normal, natural way. The higher the number (0-100), the better the color appearance. | Light Center Length (LCL): This dimension defines the location of the filament in relation to the base. It is measured from the geometric center of the filament to a specified point on, or plane through, the base. Light Center Length is subject to manufacturing tolerances. Reference points/planes from which LCL is measured are tabulated on page 7-4 for the various styles of lamp bases. |
| Volts: Lamp data is based on operation at rated voltage. | Pack/Case Quantity: Number of product units packed in a pack or case. | Initial Lumens: Initial light output. | Beam Spread: For reflector-type lamps. The total angle of the directed beam (in degrees) to where the intensity of the beam falls to 50% or 10% of the maximum value as indicated. |
| Order Code: It is important to use this five-digit code when ordering to ensure that you receive the exact product you require. | | | Rated Life – Hours: Lamp burning hours to rated life expectancy. |
| | | | Footnotes and Safety Notices: See pg 7-11 for information. |

BTL-Q500 T6/CL/P

Identifies the lamp ANSI code.

Identifies the lamp's wattage. Q=Quartz Halogen

Identifies the lamp shape and the bulb diameter in eighths of inches.

WHEN YOU DON'T KNOW THE LAMP DESCRIPTION

1. Identify bulb shape by using tables on page 7-2.
2. Measure bulb diameter using ruler in Appendix section page D-1 to determine width in eighths of an inch.
3. Identify base type using table on page 7-4.
4. Find your lamp in the table containing the bulb shape, size and base.

Footnotes and Safety Notices

- 1 Filament with low noise construction.
- 2 New Product Code. See cross reference for previous code.
- 7 Pinned base to secure correct application.
- 14 Enclosed fixture only, per UL Standard 1572. In accordance to Federal Regulations (21CFR1040.30) the following notice applies:
- WARNING:** This lamp can cause serious skin burn and eye inflammation if the outer envelope is broken or punctured, and the arc tube continues to operate. Do not use where people will remain more than a few minutes unless adequate shielding or other safety precautions are used. Certain types of lamps that will automatically extinguish when the outer envelope is broken or punctured are commercially available.
- 15 Apparent lighted length slightly longer than similar clear lamp.
- 27 Has blackening collector grid on only one side of filament. Unless burned base down, install lamp so grid is above filament.
- 31 GE lamp is 240 volt; 250 volt lamp specified for Colortran.
- 51 Silica coated.
- 52 Rough service. 6 filament supports.
- 55 Burn BDTH, but avoid horizontal burning with support spine beneath filament to prevent premature arcing.
- 62 **Safety Notice for exposed unshielded lamps (if shielded fixture use footnote 63)**

⚠ Warning

Risk of electrical shock

- Turn power off before inspection, installation or removal

Risk of fire

- Keep combustible materials away from lamp
- Use in enclosed fixture rated for this product

Pressurized lamp—unexpected rupture may cause injury, fire, or property damage

- Use eye protection when handling lamp
- Do not touch glass with bare hands
- Use in enclosed fixtures rated for this product
- Do not use lamp if outer glass is scratched or broken
- Operate lamp only in specified position
- Do not exceed 110% of rated voltage

⚠ Caution

Risk of burn

- Allow lamp/fixture to cool before handling
- Turn power off before installing lamp

Lamp may shatter and cause injury if broken

- Do not use lamp if outer glass is scratched or broken
- Dispose of lamp in a closed container
- Wear safety glasses and gloves when handling lamp

Lamp emits UV radiation which may cause eye/skin irritation. RG-2.

- Limit unshielded exposure to less than 15 minutes per day

63 Safety Notice for PAR lamps and enclosed, shielded lamps

⚠ Warning

Risk of electrical shock

- Turn power off before inspection, installation or removal

Risk of fire

- Keep combustible materials away from lamp
- Use in fixture rated for this product

A damaged lamp emits UV radiation which may cause eye/skin injury

- Turn power off if glass is broken. Remove and dispose of lamp

Pressurized lamp—unexpected rupture may cause injury, fire, or property damage

- Use in enclosed fixtures rated for this product
- Do not use lamp if outer glass is scratched or broken
- Do not exceed 110% of rated voltage
- Avoid direct water/liquid contact

⚠ Caution

Risk of burn

- Allow lamp/fixture to cool before handling
- Turn power off before installing lamp

Lamp may shatter and cause injury if broken

- Do not use lamp if outer glass is scratched or broken
- Dispose of lamp in a closed container

64 High Wattage Incandescent Par Lamps

⚠ Warning

Risk of electrical shock

- Turn power off before inspection, installation, or removal

Risk of fire

- Keep combustible materials away from lamp

Unexpected lamp rupture may cause injury, fire, or property damage

- Avoid direct water/liquid contact
- Use in enclosed fixtures rated for this product

*GE NIGHTHAWK™ halogen lamps focus more light in an area illuminated with more than 15,000 candelas in light intensity compared to a standard halogen headlamp bulb. Specific light levels vary by bulb type and headlamp assembly. See page 8-14 for illustration.

**Long Life lamps last up to 2-6x longer when compared to standard GE halogen lamps.

REVOLUTIONARY HEADLIGHT PERFORMANCE

GE NIGHTHAWK™ XENON: Get closer to the look and feel of HID lighting without the cost or hassle of conversion.

Few things attract an auto enthusiast's gaze like the cutting-edge look of HID headlamps. That is, until they see the high cost of conversion. Now there's a revolutionary solution that delivers performance and style close to HID-caliber lighting at a fraction of the cost: GE NIGHTHAWK™ XENON headlamps.

- up to **120%** more light*
- bright white light
- breakthrough performance
- exceptional visibility

GE NIGHTHAWK™ PLATINUM: High performance lamps for visibility, convenience and style.

No matter the nighttime driving conditions, GE NIGHTHAWK™ PLATINUM headlamps give you a better chance of seeing – and reacting to – what's ahead of you. The bottom line is: with more light on the road, you'll have more peace of mind.

- up to **90%** more light*
- improved reaction time
- greater visibility

Lamp Locator

The lamps listed here are not to scale. To determine the diameter of a bulb in inches, multiply the bulb number by one-eighth. For example T-2 means approximately 2/8" or 1/4" diameter.

Miniature, Sealed Beam and Automotive Lamps

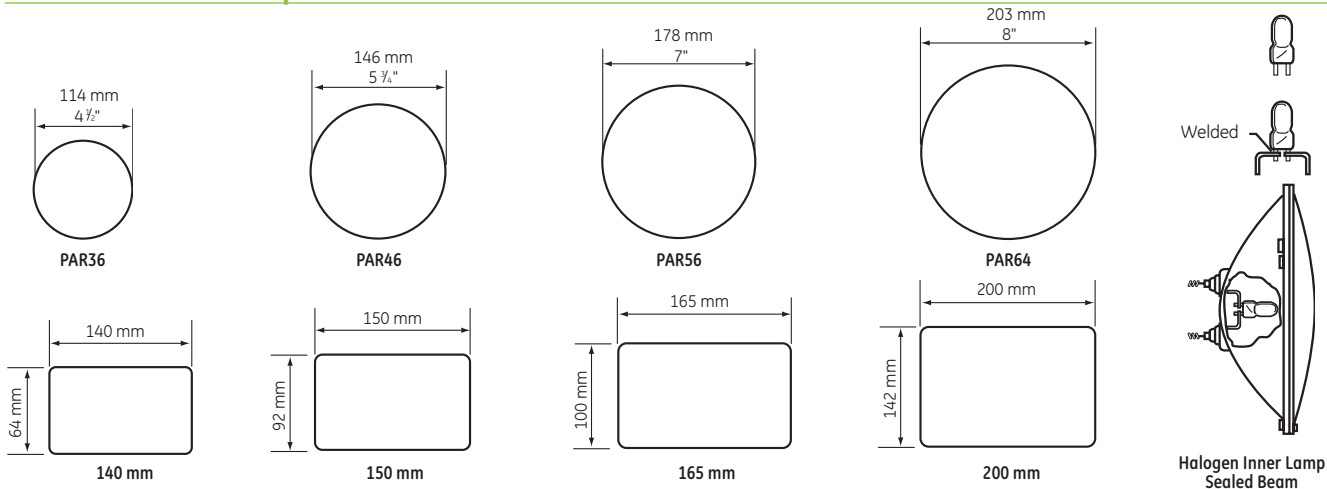

Miniature Bases

Bases provide electrical contact to the lamp and, in most cases, also support the lamp in the fixture. For miniature and subminiature lamps, bayonet or wedge base types are generally preferred over screw types when vibration is present.

In addition, wedge bases reduce socket size and complexity. Flanged or collared types are usually associated with requirements for filament location.

Sealed Beam Lamps

Sealed Beam Bases

Bases provide electrical contact to the lamp. The most common bases for sealed beam lamps are the screw terminal and contact lug types. Other types are also available, as illustrated.

Introduction

GE Miniature and Sealed Beam Product Ordering Information

GE Miniature and Sealed Beam Lamps are designed for those applications requiring specific bulb size, base, and voltage. These lamps are operated on vehicles (cars, trucks, boats, aircraft, tractors) or in special applications utilizing low voltage sources. Most lamps are designated by common ANSI (American National Standards Institute) lamp numbers and lamps in this section are arranged in numerical order. To assist you in identifying lamps, drawings (not to scale) are provided, along with descriptions of bulb and base sizes.

Specific market segments covered in this section are products used in:

| | | |
|-------------|-----------------------------|---------------------|
| Aircraft | Emergency Building Lighting | Marine |
| Automotive | Flashlight/Hand Lanterns | Medical/Instruments |
| Agriculture | Garden/Outdoor | Telephone |
| CIM/Tractor | Indicator | Toys/Entertainment |

For additional specifications refer to the Automotive Lamp Catalog obtained through your GE Sales Office. Automotive Selection Guide also available.

Finding and Ordering a Lamp

Most Miniature Lamps have a number on the base or bulb. Generally it will match the lamp number in this catalog, which is sorted in numeric order (prefixes last). The catalog is divided into Miniature and Sealed Beam sections. Sealed Beam lamps start on page 9-14. Often the first prefix is another lamp manufacturer's identification and can be ignored. You can verify the lamp using the drawings provided. Order codes for Blister, Unit, and Bulk Pack for OEM's are provided.

Formulas

The following are commonly used formulas to assist any calculations you may need. For further information, contact your GE Lamp Representative.

- Watts = Volts x Amps Candlepower
- Lumens = 12.57 x Mean Spherical
- Kelvin = Celsius + 273
- Footcandles = Candlepower/Distance squared (miniature lamps only)
- Hot Resistance (Ohms) = Volts/Amps

Abbreviations

The abbreviations used in this catalog include:

| | | | |
|--------|---|-------|--|
| A | Amperes | C.P. | Candlepower |
| ANSI | American National Standards Institute | Cand. | Candelabra |
| Bay. | Bayonet | PAR | Parabolic Aluminized Reflector |
| D.C. | Double Contact | Pf. | Prefocus |
| ECE | European Common Market (European Motor Vehicle Standards) | SAE | Society of Automotive Engineers (US Motor Vehicle Standards) |
| Flg. | Flanged | Sc. | Screw |
| HID | High Intensity Discharge | S.C. | Single Contact |
| LCL | Light Center Length | Spec. | Special |
| Min. | Miniature | Tel. | Telephone |
| MOL | Maximum Overall Length | Term. | Terminals |
| MSCP | Mean Spherical Candlepower | V | Volts |
| Nom. | Nominal | W | Watts |
| C.I.M. | Construction & Industrial Machinery | | |

GE Miniature Lamp Prefixes

| | | | |
|----|---|--------|----------------------|
| DE | Double-Ended | Q | Quartz Halogen |
| H | Halogen | W,T,R, | European Designation |
| K | Krypton Gas | C,P | |
| PC | Printed Circuit Application | D2 | Discharge |
| PR | Prefocus Base (e.g., "Flashlight Lamp") | | |

GE Miniature Lamp Suffixes

| | | | |
|------|---|----|--|
| A | Amber | TY | Letters after a quartz halogen lamp mean a deviation from the standard lamp - usually refers to the electrical terminals |
| AF | All Frost (on outside) | WW | Warm White (aircraft lighting) |
| AS15 | Ages and Selected to 15% (for candlepower) | X | Indicates some arbitrary deviation from the normal product |
| B | Blue | Y | Yellow |
| CW | Cool White (aircraft lighting) | -1 | Slip-on terminals |
| E-1 | Different lead wire material (NI plated) | -2 | Represents various deviations |
| G | Green | -3 | Represents deviations (e.g. combination terminal) |
| HD | Heavy Duty | W | European Designation (Watts) |
| HO | High Output | | |
| LL | Long Life | | |
| NH | Nighthawk™ | | |
| NHS | Nighthawk™ Sport | | |
| NA | Natural Amber (automotive lighting) | | |
| PSB | Pilot Indicator/Short Base | | |
| R | Red | | |
| SB | Silver Bowl (all or some portion of bulb is silver). Also blue halogen. | | |

Miniature, Sealed Beam and Automotive Lamps

Headings in this catalog section

The following terms and descriptions can help you when checking Halogen lamp specifications and when ordering products. Within each product line, lamps are divided into families. Within families,

lamps are listed by wattage. In each of these groups, lamps are listed alphabetically by bulb shape.

| | | | | | | | | |
|--|---|--|---|--|--|---|---|--|
| GE Lamp No.: In nearly all cases lamps are marked with a General Electric Trade Number recorded with the ANSI. See glossary of prefixes and suffixes on page 8-21. | Primary Application: Current uses of the lamp in general. Lamps are used in other applications than listed. | MSCP/MBCP: Approximate output expressed as initial mean spherical candlepower (see lumen conversion). For Sealed Beam MBCP is the maximum intensity of the beam in candelas, generally in the beam's center, and spread is beam size expressed in degrees. | Amps or Watts: Energy used expressed as amperes (A) or watts (W) at design voltage. | Bulb: The prefix letter describes the shape and the number is the approximate bulb diameter. | Filament Design: C = coiled, CC = coiled coil, -6 = horizontal, -8 = vertical to base. See Miniature and Sealed Beam Catalog for all variations. | MOL (in): In inches from the top of the bulb to the bottom of the base. | Rated Life (hrs): Lamp burning hours to medium life expectancy. | Footnotes, Warning and Caution Notices: See page 8-34 for explanation. |
| Order Code: Use this code when ordering to ensure that you receive the exact product you require. | Case Qty: Quantity of lamps per case if blister pack (BP), unit, or bulk (OEM's).* | Volts: Voltage at which the lamp is designed to provide the amperes, candlepower, and laboratory life characteristics. | | Base: Base types are depicted on the previous pages for both Miniature and Sealed Beam. | LCL (in): Distance in inches between base reference plane and filament center. | | | |

| Order Code | | | Case Qty | | | GE Lamp No. | Primary Application | Volts | Amps (A) or Watts (W) | MSCP | Bulb | Base | Filament | LCL (in) | MOL (in) | Rated Life (hrs) | Footnotes, Warning and Caution Notices |

T-2 is Tubular approximately 2/8" in diameter. Sealed Beam bulb sizes are also in eighths of an inch if round (PAR). PAR36 is 36/8" or 4-1/2" in diameter. If the Sealed Beam is rectangular in shape the longest side is measured in millimeters. A 165mm Sealed Beam measures 6-1/2" (165mm) across the top.

T 2-3/4

Identifies the shape (S= Pear, T=Tubular, G=Globe, R=Reflector)

Identifies the approximate bulb diameter in eighths of an inch.

*Miniature Incandescent BP is 2 lamps, Miniature Halogen BP is 1 lamp, selected miniature headlamps available in 2 pack BP; PC not shown.

Footnotes

- 1 Special ballast required per ECE R99.
- 2 B3 life, not average life.
- 4 Life at 14 volts.
- 10 Life at 5 volts.
- 11 Filament vertical.
- 12 Average overall length.
- 13 Filament supported.
- 14 This lamp may not be suitable for some uses because of its excessive wattage requirements for the bulb size.
- 15 This lamp may not be suitable for some uses because of its limited mechanical strength.
- 17 Filament shielded.
- 23 Life at 7 volts.
- 32 Designed and rated for operation in supplementary cathode preheat circuits.
- 33 Connections of major and minor filament to base are reversed from those for automotive lamps with Double Contact Index bases. Burn base down to horizontal.
- 44 Life at 6.6 volts.
- 78 ANSI specifies .38" LCL and .63" MOL.
- 79 Life shown is AC voltage only. DC life will be approx. 50% of AC.
- 80 Light output is approx. end foot candles, not spherical MSCP.
- 92 Filament segments parallel.
- 109 Special fixture required for highway use.
- 110 To be used with variable load flasher in applications where bulb outage indication is not required, or with an appropriate fixed load flasher. Flash rate may be altered if used with incorrect fixed load flasher.
- 113 This is a flange seal wire terminal lamp. When unbased lamps such as these are handled and wired into a device, damage can be kept to a minimum by allowing sufficient clearance so that no physical strain or excessive heat is placed on the exhaust tube, exhaust tube tip, or glass seal; by taking care in mounting lamp in equipment so that any material touching the glass is compatible in thermal expansion; and by avoiding excessive tensile strain on the lead wires.
- 116 Life tests are performed on DC voltage only.
- 121 To minimize the possible adverse effects on lamp life due to excessive wattage in relationship to bulb size: Burn Base Down to Base 45° Above Horizontal. Regardless of burning position, this excessive wattage will abnormally decrease light output during lamp life.
- 122 This is a wire terminal lamp. The glass-to-metal seal (and tip where applicable) are susceptible to damage by thermal shock, and soldering or welding within 1/8" of the glass should be avoided as glass cracks and air leaks may develop. Solderability may be adversely affected by storage for an extended period in excess of six months or by storage in a high-humidity environment. Lamps with tinned leads would be subject to these storage restrictions. Nickel-plated leads are not recommended for soldering; however, their ability to be welded is not affected by these storage restrictions.
- 124 .028" metal pins spaced 44mm (.157") apart. GE's two-pin lamps might not be compatible with all G-4 sockets since many sockets do not provide clearance for the exhaust tip.
- 128 Output is minimum 1/4" spot at .100" from bulb top.
- 132 Paint may peel, craze or discolor when subjected to excessive moisture, heat, and freezing in housings with plugged drain holes or which otherwise leak or trap moisture.
- 138 Life Test Conditions: Cycled 5 minutes on, 5 off.
- 139 Life Test Conditions: Cycled 20 minutes on, 20 off.
- 147 Differs from ANSI.
- 160 Filament will generate specified MSCP in a non-shielded bulb.
- 162 Life based on three hours of burning per start. MSCP at 100 hours. Designed and rated for operation in supplementary cathode preheat circuits. Use these lamps with auxiliary equipment specially designed to produce proper electrical values according to established specification. For total load, add auxiliary watts to lamp watts.
- 166 Contact Lugs are angled.
- 167 Filament shielded.

Warning and Caution Notices

301

⚠ WARNING

Risk of fire

- Keep combustible materials away from lamp
- Use in fixture rated for this product

A damaged lamp emits UV radiation which may cause eye/skin injury

- Turn power off if glass bulb is broken. Remove and dispose of lamp

Pressurized lamp—unexpected rupture may cause injury, fire, or property damage

- Use in enclosed fixture rated for this product
- Do not use lamp if outer glass is scratched or broken

⚠ CAUTION

Risk of burn

- Allow lamp/fixture to cool before handling

Lamp may shatter and cause injury if broken

- Do not use lamp if outer glass is scratched or broken
- Dispose of lamp in a closed container

302

⚠ WARNING

Risk of fire

- Keep combustible materials away from lamp
- Use in fixture rated for this product

Unexpected lamp rupture may cause injury, fire, or property damage

- Avoid contact with glass during operation
- Avoid direct water/liquid contact
- Use in enclosed fixture rated for this product

304

⚠ WARNING

Risk of fire

- Keep combustible materials away from lamp
- Use in fixture rated for this product

Lamp emits UV radiation which may cause eye/skin injury

- Avoid exposure of eyes and skin to unshielded lamp

Pressurized lamp—unexpected rupture may cause injury, fire, or property damage

- Use eye protection when handling lamp
- Do not exceed rated voltage
- Do not touch glass with bare hands
- Do not use lamp if outer glass is scratched or broken
- Dispose of lamp in a closed container
- Do not turn on lamp until fully installed
- Keep away from children
- Use protective screen when handling

⚠ CAUTION

Risk of burn

- Allow lamp/fixture to cool before handling

For Best Performance

- Limit seal temperature to 350°C
- Maintain 250°C minimum bulb wall temperature
- Remove fingerprints from bulb with grease-free solvent
- Operate at design voltage

305

⚠ CAUTION

Lamp may shatter and cause injury if broken

- Do not use excessive force when installing lamp

306

⚠ WARNING

Pressurized lamp—unexpected rupture may cause injury, fire, or property damage

- Use eye protection when handling lamp
- Do not exceed rated voltage
- Avoid direct water/liquid contact
- Use in enclosed fixture rated for this product
- Do not use lamp if outer glass is scratched or broken
- Dispose of lamp in a closed container
- Do not turn on lamp until fully installed
- Keep away from children
- Use protective screen when handling

⚠ CAUTION

Risk of burn

- Allow lamp/fixture to cool before handling

307

⚠ WARNING

Pressurized lamp—unexpected rupture may cause injury, fire, or property damage

- Do not use lamp if outer glass is scratched or broken
- Dispose of lamp in a closed container

308

⚠ WARNING

Risk of fire

- Keep combustible materials away from lamp
- Use in fixture rated for this product

Pressurized lamp—unexpected rupture may cause injury, fire, or property damage

- Use eye protection when handling lamp
- Do not exceed rated voltage
- Do not touch glass with bare hands
- Do not use lamp if outer glass is scratched or broken
- Dispose of lamp in a closed container
- Do not turn on lamp until fully installed
- Keep away from children
- Use protective screen when handling

⚠ CAUTION

Risk of burn

- Allow lamp/fixture to cool before handling

For Best Performance

- Limit seal temperature to 350°C
- Maintain 250°C minimum bulb wall temperature
- Remove fingerprints from bulb with grease-free solvent
- Operate at design voltage

Warning and Caution Notices (continued)

309

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal

⚠ CAUTION

Lamp may shatter and cause injury if broken

- Wear safety glasses and gloves when handling lamp
- Do not use excessive force when installing lamp

310

⚠ WARNING

Risk of electric shock

- Turn power off before inspection, installation or removal

Risk of fire

- Use in fixture rated for this product

A damaged lamp emits UV radiation which may cause eye/skin injury

- Turn power off if glass bulb is broken. Remove and dispose of lamp

Pressurized lamp—unexpected rupture may cause injury, fire, or property damage

- Use eye protection when handling lamp
- Do not exceed rated voltage
- Do not touch glass with bare hands
- Avoid direct water/liquid contact
- Use in enclosed fixture rated for this product
- Do not use lamp if outer glass is scratched or broken
- Use only properly rated ballast
- Operate lamp only in specified position
- Do not use beyond rated life
- Do not turn on lamp until fully installed

⚠ CAUTION

Risk of burn

- Allow lamp to cool before handling
- Do not turn on lamp until fully installed
- Turn power off before installing lamp

Lamp may rupture if used on wrong ballast

- Use only properly rated ballast

Lamp may shatter and cause injury if broken

- Wear safety glasses and gloves when handling lamp
- Do not use lamp if outer glass is scratched or broken
- Dispose of lamp in a closed container
- Remove and install by grasping only plastic portion of the lamp
- Do not use excessive force when installing lamp

INSTRUCTIONS

FDA Warning

WARNING – This lamp can cause serious skin burn and eye inflammation from short-wave ultraviolet radiation if outer envelope of the lamp is broken or punctured and the arc tube continues to operate. Do not use where people will remain for more than a few minutes unless adequate shielding or other safety precautions are used. Certain types of lamps that will automatically extinguish when the outer envelope is broken or punctured are commercially available. 21 CFR 1040.30.

Hg – LAMP CONTAINS MERCURY

Manage in Accord with Disposal Laws

See: www.lamprecycle.org or 1-800-435-4448

Lamp should be installed by an automotive service specialist.

Base Identification

Typical bases used on Projection lamps in this catalog are shown below along with their names and common abbreviations. Where the base is an ANSI standard type, the ANSI reference code (which is the same as the IEC base code) is also shown. ANSI reference codes

conform to American National Standard C81.10, C81.30, C81.50 specifications for electric lamp bases and lampholders. Illustrations are not to scale.

Light Center Length (LCL)

Light center length is the distance from the center of the light source to the point indicated below for the lamp base used. It is a measurement to which the lamp is designed and is subject to the manufacturer's tolerances.

| Base Type | LCL Reference |
|-----------------|------------------------|
| D.C. Bayonet | Top of base pins |
| 2-Pin Prefocus | Bottom of base ceramic |
| Miniature 2-Pin | Bottom of base pins |
| Glass 2-Pin | Bottom of base pins |

Filament Identification

The configuration of the filament in all tungsten filament lamps (including Quartzline®) is identified by a prefix letter and a suffix number. The prefix letter indicates whether the filament wire is a

single coil (C) or a coiled coil (CC). The suffix number indicates the form or arrangement of the filament coil or coils on its support structure. Illustrations are not to scale.

Introduction

General Electric Projection Lamps are designed for a wide variety of applications...and now extending well beyond the original picture-taking and audio-visual projection uses into such fields as: fiber optical systems, graphic arts, video camera lights, airport runway markers, micrographics, photo printers and enlargers, medical/scientific instruments and many others.

The information contained in this section is designed to provide end-users, equipment manufacturers and lamp distributors and dealers with:

- Essential technical data on GE Projection Lamps (Quartzline®, Incandescent and Photoflood)
- Suggested substitutes for improved performance or discontinued lamps

The majority of Projection Lamps described herein are characterized by:

- Precisely manufactured, tailored filaments maximizing source brightness, optimum performance in precision optical devices

- High light-generating efficacy (lumens per watt)...to help minimize power requirements and heat generation
- Prefocus type bases, or rim-reference mounting for Multi-Mirror® lamps...to position the filament accurately in relation to the associated optics
- Design life Rated Life (per ANSI Standard)
- Lamps with internal or external reflectors (as in Multi-Mirror® and some 4-pin projection lamps) permitting high-efficiency illumination system designs with a minimum of additional optical control elements

Manufacturers and designers of equipment requiring lamps should select lamps of established design whenever possible for maximum economy, as well as for ease of replacement by their customers through regular trade channels. General Electric offers application engineering assistance to all customers for applying lamps in product design. Contact your local GE Lamp Representative for additional information or assistance.

Warning and Caution Notices Information

As with any product, certain precautions should be observed in the handling and use of GE Projection Lamps to provide optimum

performance and safety. These are given in the Caution Notices that are printed on page 9-7.

Important Notice

This catalog contains accumulated data to March 2008. Additional information is constantly being uncovered through research and testing, which may modify the data given herein. This is particularly true of newer lamps. For the latest lamp design data and information, contact your General Electric Lamp Representative.

The data and suggested applications contained in this catalog, as well as any additional information our representative may be able to furnish, are for general information only and are not intended and should not be taken as representations or warranties as to the suitability of a lamp for any particular application or use in any particular equipment, nor are our representatives authorized to make any such representations or give any such warranties.

Applications and conditions of use are many and varied, and beyond our control. We cannot possibly have the same degree of knowledge that the purchaser has with respect to the design of his equipment and the conditions of its use. Therefore, it is up to the purchaser to make its own determination as to the suitability of a lamp for his intended application or use and to assume the responsibility for that determination.

General Electric desires to supply the best possible products at all times. For this reason, General Electric reserves the right to make changes in its products when it believes such changes will improve its products.

Projection Lamps

General Information

General Electric Projection Lamps are briefly described in the ANSI lamp index (page 9-7). More extensive descriptive and performance data are found in the lamp tables, which are organized as "families" of lamps with one or more features in common – such

as Multi-Mirror® Quartzline®, Single-Ended Quartzline®, 4-Pin Based Incandescent, Photoflood, etc. Within each table, lamps are listed alphabetically by GE Lamp Code.

GE Multi-Mirror® Quartzline® Projection Lamps

Invented By GE For Optimized Projection System Performance, the Multi-Mirror® and its new companion, the Mini Multi-Mirror®, are reflector halogen Quartzline® lamps with innovative GE features that

result in better system efficiency, screen uniformity, lamp-to-lamp consistency and relamping convenience.

| Feature | Benefit | Applications |
|---|--|---|
| <ul style="list-style-type: none"> Dichroic reflector | <ul style="list-style-type: none"> Cool light beam Efficient light reflection | <ul style="list-style-type: none"> Slide Projection Front/Rear Screen Projection |
| <ul style="list-style-type: none"> Precise rim reference Accurate snap-in alignment | <ul style="list-style-type: none"> Quick lamp installation | <ul style="list-style-type: none"> Microfilm Overhead Projection |
| <ul style="list-style-type: none"> Faceted reflector | <ul style="list-style-type: none"> Efficient beam for brighter image Uniform screen image Precision beam control | <ul style="list-style-type: none"> 16mm Movie 8mm Movie Film Strip |
| <ul style="list-style-type: none"> Halogen Quartzline® lamp | <ul style="list-style-type: none"> Whiter and brighter light No bulb blackening/blistering Constant light output through life Stable color temperature | <ul style="list-style-type: none"> Enlargers/Printers Fiber Optics Medical/Scientific Instruments Video Camera Lights Airport Runways Display |

Each GE Multi-Mirror® lamp type is optically tailored to its application. First, the appropriate type of multi-faceted reflector is determined. Then a filament tube developed, using advanced

Quartzline® technology. Finally, the two are combined, using sophisticated, computerized precision-assembly techniques. The result – consistently high performance...lamp after lamp after lamp.

Headings in this catalog section

The following terms and descriptions can help you when checking Projection lamp specifications and when ordering products. Within each product line, lamps are divided into families. Within families, lamps are listed by ANSI code.

Bulb Shape:

Projection Lamp bulb designations use a combination of letters and numerals to indicate bulb shape and maximum diameter in eighths of an inch. For example: a "T12" bulb is Tubular-shaped and twelve-eighths of an inch, or 1-1/2" in diameter. Illustrations of typical Projector Lamps and their respective bulb designations are shown in the tables of lamp families, pages 9-2.

Base:

Projection Lamp base illustrations appear on page 9-2, along with their common trade names and abbreviations, plus their letter-number ANSI/IEC designations where applicable.

Watts (or Amps):

This column shows the rated power consumption (watts) of the lamp at its design voltage. A few lamps, in Table 5, are rated in terms of current (amperes) drawn initially at their rated voltage. The watts shown for the lamps in Table 5 are the approximate initial values for operation at rated amperes.

Order Code:

It is important to use this five-digit code when ordering to ensure that you receive the exact product you require.

Description:

This is a 3-letter or letter-number code uniquely identifying the lamp for ordering purposes. In some instances, lamps with 3-letter (ANSI) codes are offered in more than one design voltage, in which case the voltage required should also be specified when ordering.

Volts:

The voltage shown is the design voltage of the lamp, on which the life and wattage ratings are based. Lamps are available only in the design voltages shown. When ordering lamps listed for more than one voltage, be sure to specify the voltage required (supply voltage variation can significantly affect lamp life).

Case Quantity:

Number of product units packed in a case.

Filament Design:

Typical filament configurations for Projection Lamps are shown on page 9-3, along with an explanation of the filament designation system.

Maximum Overall Length (MOL):

This dimension includes the lamp bulb and all rigid parts of the base. Since the listed lengths include maximum tolerances, actual lamps are generally slightly shorter.

Light Center Length (LCL):

This dimension defines the location of the filament in relation to the base. It is measured from the geometric center of the filament to a specified point on, or plane through, the base. Light Center Length is subject to manufacturing tolerances. Reference points/planes from which LCL is measured are tabulated on page 9-2 for the various styles of lamp bases.

Rated Life:

Life ratings of Projection Lamps are based on closely controlled laboratory tests of lamps, at their rated voltage, over a long period of production time. Rated Life is not necessarily the same as service life; mechanical shock and vibration, voltage fluctuation, temperature and other environmental factors may result in shorter service life. As with any median value, some individual lamps will operate longer and some will operate shorter, than their Rated Life (supply voltage variation can significantly affect lamp life).

Initial Lumens:

The value shown is based on spherical photometry, at rated voltage, of lamps that have been seasoned for approximately 15% (or minimum of 2 hours) or more of their rated average life.

Color Temperature:

The radiation within the visible spectrum from tungsten filament lamps is similar in spectral distribution to that from a "blackbody" at specific color temperatures. The Color Temperatures shown are approximate initial values in degrees Kelvin (K) for lamps operated at rated voltage.

CBCP (Center Beam Candlepower):

For reflector type lamps, Center Beam Candlepower is the intensity (candelas) at the center or maximum intensity of the beam.

Operating Position:

For good performance, lamps must be used within specified limitations on operating position. The following abbreviations are used in the lamp tables to indicate these limits:
BD = Base Down. Operate only vertical, base down.
HD = Base Down to Horizontal. Do not operate base above horizontal.
H22 = Operate base down to 22° base up.
U = Operate in any position.

Warning and Caution/Footnote:

See page 9-7 for explanation.

Additional Information:

Typical application and/or other important information.

Warning and Caution Notices

A

⚠ Warning

Risk of electrical shock

- Turn power off before inspection, installation or removal

Risk of fire

- Keep combustible material away from lamp
- Use in enclosed fixtures rated for this product

Pressurized lamp – unexpected rupture may cause injury, fire, or property damage

- Do not exceed 110% of rated voltage
- Avoid direct water/liquid contact
- Use in enclosed fixtures rated for this product
- Do not use lamp if outer glass is scratched or broken

Caution

⚠ Risk of burn

- Allow lamp/fixture to cool before handling
- Turn off power before installing lamp

Lamp may shatter and cause injury if broken

- Do not use lamp if outer glass is scratched or broken
- Dispose of lamp in enclosed container

Understanding the New Fluorescent Ballast Rule, EPCA 10 CFR 430

In 2008 Congress began the Rulemaking for Fluorescent Ballasts, and as it is a 3-year process, the New Rule was completed in November 2011, and will come into effect in November of 2014. The current rule covered only the Federally Regulated T12 lamp ballast for 4-foot and 8-foot T12 lamps and was based on Ballast Efficacy Factor (BEF) as the performance metric. The BEF measurement is a complicated photometric process with many opportunities for error in the measurements. In order to improve the accuracy of the rating process, a new metric was developed, Ballast Luminous Efficiency (BLE), a purely electrical measurement without the error prone photometric measurements.

The New Rule also expands the number and types of ballasts that will be under Federal Regulation. Currently, until November 2014, only the T12 types mentioned are under Regulation. In November 2014, many more types of ballasts will be under Regulation, including most T8 and T5 ballasts. Sign and Residential ballasts are also included in the New Rule. Ballast manufacturers are required to report the performance of these ballast types to the Department of Energy and certify that they meet the BLE requirements for the specific ballast types.

The test plan for the BLE metric measurement is based on the ballast operating a known lamp load. The total discharge or output power is measured and applied to an equation for the specific ballast type. The equation provides the minimum performance limit. The ratio of the output power divided by the input power defines the ballast efficiency, and the ballast efficiency must be greater than the calculated limit for the ballast to be compliant.

One other change that is coming is a new way to determine Ballast Factor, or the light output level of the ballast. The present way is a photometric ratio measurement requiring a controlled environment and reference ballasts and lamps. In the new method, a purely electrical measurement, the output the average output power for one lamp is compared to an Industry Standard (ANSI) rated lamp power. The ballast factor is simply the ratio of the measured power divided by the ANSI rated power.

The familiar BEF value can be calculated as it always has been, dividing the Ballast Factor by the input power. However, an existing BEF cannot be “back calculated” to arrive at an input wattage or ballast factor.

The increased performance requirements of the New Rule will cause some ballasts to be taken off the market. Many GE ballasts already meet the new 2014 requirements and will continue to be available for sale as the Rule becomes effective.

Understanding T8 Fluorescent Ballasts

A comprehensive range of solutions...from GE, the name you trust.

GE introduced the first fluorescent ballast more than 60 years ago. Today we are providing high-frequency electronic ballasts for almost every fluorescent application.

With our UltraMax® and UltraStart® ballasts, we are bringing you the future in ballast performance.

GE revolutionizes lighting again with breakthrough technology. Our patented UltraMax® instant-start and UltraStart® programmed start electronic ballasts transform the power of light into efficiency and savings from store shelves to the installation site. The foundation of the "Ultra" family of ballasts starts with its high efficiency ratings. High efficiency ballasts are a minimum of 90% efficiency with some ballasts nearly 95% efficient which means the ballast only consumes 5-10% of the total system power. These high efficiency ballasts exceed minimum high efficiency standards as established by almost all energy advocate groups, utility rebate programs and the NEMA Premium® ballast program. The ballasts are marked with the Ultra brand as well as the NEMA Premium® ballast mark. These ballasts have multi-voltage control (MVC), which automatically adjusts to handle voltage from 120V through 277V. That cuts the ballast models you need to stock from 40 down to 13, which can dramatically reduce inventory carrying costs. UltraMax® ballasts have ArcGuard Protection, too, with a UL Type CC Anti-Arc Rating. Plus, they're ultra-lamp-friendly, with a low lamp current crest factor of 1.4 for optimal lamp performance. Both UltraMax® and UltraStart® have anti-striation control for better light quality with no lamp striations (spiraling). And the small, low-profile design of these ballasts makes retrofits effortless at the job site. Also unique to our programmed start UltraStart® ballasts is parallel lamp operation which means that if one lamp fails the others remain on, and quick starting times of less than 700 milliseconds which is necessary in avoiding delays with automatic sensors.

GE Fluorescent Ballast Types

Electronic Instant Start

The most common fluorescent ballast is the instant start and is used typically in long 3 to 10-hour lamp cycle applications. These ballasts are energy efficient and can deliver 20% to 40% energy savings when installed with energy-efficient lamps in building retrofits. These ballasts deliver >550 open circuit volts when starting lamps and operate lamps at high frequencies which offers flicker-free operation and better lamp efficiencies. The ballasts are significantly quieter than conventional magnetic ballasts and are backed by GE's ultra system 5-year ballast limited warranty and extended lamp warranties.

UltraMax® Professional Series

A family of high-efficiency GE T8 instant-start electronic linear fluorescent ballasts designed to optimize GE's T8 Ultra lamps for optimal system energy savings. UltraMax® ballasts have a low lamp current crest factor and virtually "read" and adapt to incoming voltage from 108V to 305V. Other features include UL Type CC Anti-Arc Rating and anti-striation control to eliminate lamp striations and spiraling. These ballasts are offered in ballast factors: low wattage (.77), normal light (.87), normal-high (N+) (1.0) and high (>1.15).

UltraMax® General Series

Offered in dedicated or multi-volt (120-277V), these high-performance T8 instant-start ballasts also meet minimum efficiency requirements as established with the NEMA Premium® ballast program. These ballasts are offered in ballast factors: low wattage (.77), normal light (.87), and high (>1.15).

Programmed Start

Programmed Start electronic ballasts have a lamp starting method that preheats lamp filaments before applying an open circuit voltage (OCV) to start the lamp. Use Programmed Start ballasts to ensure long lamp life when turning lamps on and off more than five times in a day or in conjunction with any automatic light control or sensor. This type of starting circuit keeps lamp-end blackening to a minimum and improves lamp life performance, especially in applications where the lamps are frequently switched on and off.

UltraStart®

UltraStart® is a family of high-efficiency GE Programmed Start electronic linear fluorescent ballasts that also exceed NEMA Premium® ballast efficiency requirements but are designed to optimize GE's T8 Ultra lamps in frequently switched applications. Instant start ballasts provide 7,000-13,000 starts before 50% lamp failure. UltraStart® provides greater than 100,000 starts before 50% lamp failure. UltraStart® ballasts provide the same energy savings and convenience of instant start ballasts but with the longer lamp life offered a programmed start ballast. These ballasts are offered in ballast factors: programmed start x-low wattage (XL) (.60), low wattage (.71), normal light (.87), and high (>1.15).

Ballast Date Codes

Date Codes

GE electronic ballast manufacturing date codes are located on the upper right-hand corner of the label. The code lists the month, year and day of manufacture. A typical code is C16-073, where the month is listed as A (January), B (February), C (March) as in this code followed by the year 16 (2016) and the date of manufacture 073 (the 73rd day of 2016).

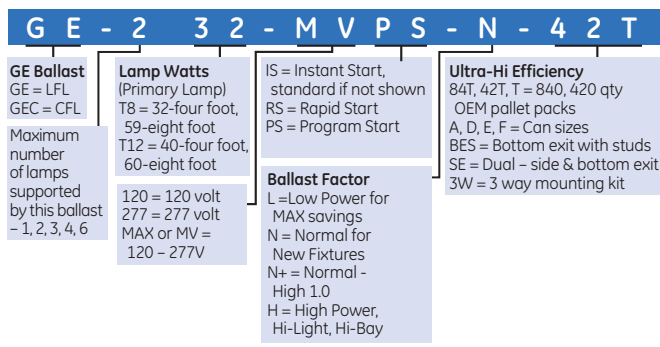

Ballast Life

GE electronic ballasts are designed and manufactured to an average life expectancy of 60,000 hours of operation at maximum rated case temperatures. As a rule of thumb, ballast life is doubled for every 10C reduction in ballast case temperature. However there are other variables such as transients, voltage sags and swells, ambient temperature, etc., which affect ballast life as well.

Instant Start vs. Rapid Start Sockets

When using programmed start or dimming ballasts in fixtures, sockets must be 2-pin rapid start type. Fixtures with T8 instant start ballasts must use jumpered rapid start sockets or shunted lamp holders (internal to the lamp holder) that bridge the lamp bi-pins together into one contact on each side of the lamp. If retrofitting from a instant start ballast fixture with shunted sockets to a dimming or programmed start ballast, rapid start type sockets must be used to properly start lamps and maintain rated lamp life.

GE Ballast Electronic nomenclature

Understanding Fluorescent Systems

GE introduced the first practical fluorescent lamp in 1938. All fluorescent lamps operate on electrical control gear called a ballast. Today, electronic ballasts have continued to replace the magnetic designs that were common previously. The 4-foot T8 lamp on an electronic ballast is the most common system. The generic version of this lamp is called the F32T8 and in recent years, energy saving reduced wattage lamps like the F28T8 and the F32T8/25W have become popular. These lamps typically operate on Instant Start (IS) or Programmed Rapid Start (PRS) ballasts and both types of ballasts are available in a variety of ballast factors ranging from 0.60 to 1.18.

Ballast Factor

The F32T8 lamp has a "nominal" wattage of 32 watts. Nominal means "in name only" because there are no ballasts commercially available that will operate this lamp at 32 watts! The "N" or "Normal" ballast factor ballast operates this at around 26 watts while the "L" operates the lamp around 23 watts; the "N+" operates it around 29 watts and the "H" around 34 watts. Electronic ballasts operate lamps at high frequencies of greater than 20 kHz, which results in more efficient lamp operation than at 60 kHz, like the magnetic ballasts they replace. This results in a lamp that is more efficient than the 32 nominal watts.

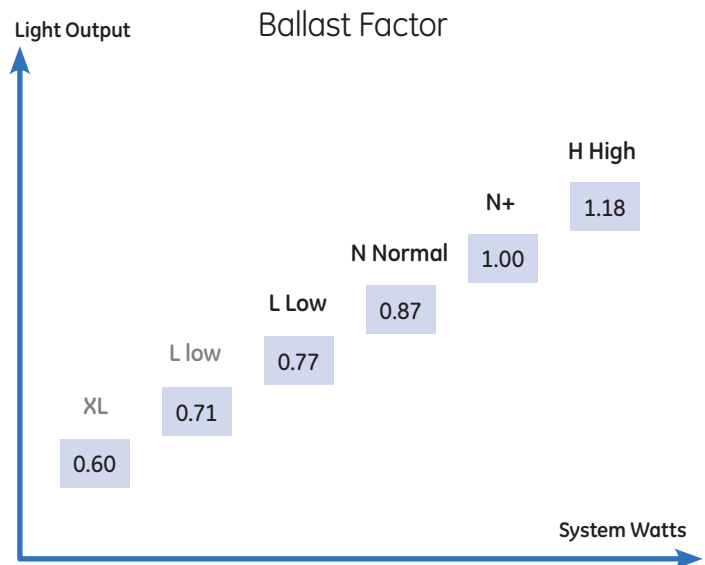

Unlike HID lamps and Incandescent/Halogen lamps which are designed for optimum performance at a specific wattage, linear fluorescent lamps can be operated over a reasonably wide range without sacrificing performance, such as life or efficacy. Therefore, there is no "optimum" wattage for a lamp, only a range. The F32T8 lamp can produce between 60% to 118% of its catalog lumens when operated on a ballast with a ballast factor of 0.60 to 1.18. The higher the operating wattage, the higher the lumen output within this range.

Consumers have a choice among ballasts, depending on how much light they desire from the lamp and how much energy they are trying to save. The ballast specification from the ballast manufacturer provides the "input wattage" of the ballast. A two lamp electronic ballast with input watts of 56 watts (BF of 0.88) is using 56 watts of power to operate 2 lamps--typically 26 watts in each lamp and 4 watts in the ballast. In contrast, a ballast with BF of 1.18 will consume 76 watts but also produce more light.

An engineer or designer will choose a high BF when trying to "squeeze" as much light as possible from the lamp, e.g. in high-bay applications or when they are trying to reduce the number of lamps used in the area. A lower BF reduces the light output and wattage of each lamp, so that more lamps (and more fixtures) are needed to achieve a certain footcandle level in the same area. Of course more fixtures also means closer spacing and more uniform lighting.

It must be noted that ballast factor (and any measure involving BF) requires a measurement of lamp lumens and is, therefore, not a pure electrical measurement. The uncertainty and variation associated with individual lamp performance is present in these measures.

$$\text{Actual Light Output of Lamp} = (\text{Catalog Lumens}) \times (\text{Ballast Factor})$$

Instant Start and Programmed Rapid Start Ballasts

There are two major families of ballasts. While the current limiting function is the same, these ballasts differ in how they start the lamp.

Instant Start (IS) Ballasts apply a relatively high voltage (e.g. 550 volts) to get the discharge going and the lamp starts instantaneously. (GE's UltraMax® family)

Programmed Rapid Start (PRS) Ballasts provide a gentler start through cathode heating prior to application of starting voltage, and are particularly useful when lamps are turned on and off frequently (motion sensors, occupancy sensors). However, they are being used even in one-start-a-day applications because they extend lamp life significantly. (GE's UltraStart® family)

Ballast Efficacy Factor (BEF)

BEF is BF (Ballast factor) divided by ballast input watts. For a given BF and a certain number of lamps operated on the ballast, the more efficient ballast will have lower watts and, therefore, a higher BEF.

$$\text{Ballast Efficacy (BEF) Factor} = \frac{\text{Ballast Factor}}{\text{Ballast Input Watts}} \times 100$$

Some industry groups write standards based on BEF in order to identify more efficient ballasts. However, this measure is somewhat obscure and an alternate measure that is simpler to understand is:

System Efficacy (Mean System LPW or MLPW)

This is the mean source lumens provided by the particular system divided by the watts the system is using.

$$\text{Mean Source Lumens} = \left(\text{Lamp Mean Lumen Rating} \right) \times \left(\text{Ballast Factor} \right) \times \left(\text{Number of Lamps} \right)$$

and

$$\text{System Efficacy (MLPW)} = \frac{\text{Mean Source Lumens}}{\text{Ballast Input Watts}}$$

The Consortium on Energy Efficiency (CEE) uses both BEF and MLPW in its documents on high performance T8 specifications and reduced wattage T8 specifications. The rebate programs of many utilities around the country currently use these two measures to determine which systems will qualify for rebates.

Ballast Electrical Efficiency (BE)

A simple electrical measure of how efficiently a ballast performs is:

$$\text{Ballast Efficiency} = \frac{\text{Watts Delivered to Lamps}}{\text{Ballast Input Watts}}$$

NEMA (National Electric Manufacturer's Association) uses Ballast Efficiency (BE) as an alternative method to designate "NEMA PREMIUM" ballasts as those having 90% or greater electrical efficiency. BE is gaining increasing acceptance as an objective and reproducible measure because it excludes the variability present in individual lamp performance and the difficulties associated with accurate determination of lumens.

Fluorescent Ballast Application Notes

Ballast Operating Lifetime

Heat is the enemy of modern electronic ballasts. As ballast case temperature increases, life expectancy decreases. GE ballast designs feature patented high efficiency circuits that have less losses and lower internal heat generation than competitive ballasts. Ballast lifetime is developed from thermal testing conducted per UL specified test conditions at a 40°C still air ambient condition. Some GE ballasts are even UL approved for use at 55°C ambient without exceeding the maximum permissible case temperature. Since GE ballasts typically operate well below the maximum temperature rating, the ballast lifetime will usually extend longer than the design life of 60,000 hours. Reducing the case temperature by 10°C will double the life expectancy, but this depends on the operating environment which includes ambient temperature, fixture thermal performance and input voltage conditions.

EMI and RFI

All electronic ballasts operate at frequencies that generate Electromagnetic Interference or Radio Frequency Interference. GE Ballasts are tested by FCC certified labs to ensure their emissions are well within the established limits for Class A Commercial and Industrial applications. Some GE ballasts are designed for Residential applications and meet a more stringent Class B Consumer FCC rating. The Consumer rating will minimize chances of the ballast interfering with radio and television reception. If interference results, ensure the ballast case is properly grounded to the metal fixture, and the fixture is grounded by a green ground wire that connects directly to the service panel. As the electromagnetic spectrum is increasing occupied, it is recommended to test a sample lamp and ballast system in the intended environment to ensure there are no undesired interactions with other equipment or systems operating in the same environment.

Energy Saving Lamps

Energy saving lamps lower the lamp operating wattage by use of special gas mixtures. These lamps are sometimes harder to strike or break down than full wattage lamps and due to the gas mixture, may be more susceptible to striations during operation. GE Ballasts feature proprietary anti striation circuitry that minimize or completely eliminate striation effect of energy saving lamps. Ballast remote mounting distance is specified for standard full wattage lamps only.

Fixture Wiring Techniques

Electronic ballasts are now much more popular than the old magnetic ballasts, offering superior energy efficiency, greater lamp efficacy, and cooler operation. The first electronic ballasts operated only slightly above the audible frequency range around 22 kHz. As today's ballasts operate at high frequency, typically 40 kHz and higher, some attention is needed to ensure the fixture wiring does not create any starting or operational issues due to wiring capacitance.

As ballasts decrease in size, the operation frequency increases. The increased frequency of operation makes capacitive effects more pronounced. Capacitive effects come from a high frequency lead wire being in proximity to another lead wire or the grounded metal of the fixture. Worse capacitive effects result when the lead wires are closer and the frequency is higher.

When installing ballasts into fixtures, the wiring needs to be routed point to point and if possible, the excess wire trimmed out. Occasionally, some installers tend to be too neat, twisting the wires together or bundling the wires together with wire ties. While this does make for a neat fixture, it may create capacitive effect issues for the lamp and ballast system.

Wire bundling can create unintended current flows from lead to lead and also from lead to ground in the fixture. These current flows are parasitic, and will reduce the available starting voltage, preheating current or discharge current in the lamp. The results can be poor or erratic starting or reduced system efficacy as some of the energy from the ballast is getting "short circuited" away from the intended lamp load. In T5 or CFL applications, excessive stray capacitance can also affect End Of Life circuit operation, causing the ballast to prematurely shut down.

In dual switched systems, or systems that use two or more ballasts within the same fixture, ballasts more subject to cross talk and interference due to capacitive effects. It is important the wiring be placed neatly without bunching up the excess in the wiring channel. Lamp leads can run parallel to each other but should not be bundled or tied together. Lamp leads should also be trimmed when possible to eliminate excess lead length. It is also good to keep the output leads from one ballast away from those of the other ballast. Lamp leads should also be kept away from the AC input leads as this can cause undesired interference or EMI, which can affect other devices operating on the same power source.

In summary, the lamp lead wiring should be laid parallel into the fixture with excess length trimmed. Do not twist or otherwise bundle the leads together, and ensure no leads are caught or crimped between the ballast channel cover and the fixture body.

Remote and Tandem Mounting of Ballasts

As today's economics drive lower first costs, many fixture manufacturers increasingly use only one ballast to operate lamps in two or more fixtures. This tandem mounting scheme decreases the total number of ballasts needed for a given installation. The fixtures are typically interconnected with a wiring "whip" of flexible metal conduit with a number of wires inside. The whip brings the high frequency lamp leads from the ballast in one fixture to the lamp or lamps in a satellite fixture. Tandem operation has lamps operating in the fixture that has the ballast and also in the satellite fixture.

Remote mounting is when a ballast is located in a separate enclosure without lamps and wires to all the lamps run through a conduit or flexible whip to a remote fixture which contains the lamps.

In past years, ballasts were magnetic and operated at 60 Hz, and tandem or remote mounting scheme was only occasionally used, so issues with remote or tandem mounting were not so frequent. In today's energy efficient electronic ballasts, the frequency is much higher, usually greater than 40 kHz, and more fixtures are being tandem operated to manage first costs of a system. Tandem operation can lead to system issues such as poor or erratic starting and differences in light level during steady state lamp operation.

These issues develop when the combination of high operating frequency and parasitic capacitance from the wiring create unintended coupling between conductors or to earth ground. Each wire in the fixture and the interconnect whip will have a certain capacitance to other wires running parallel to it, and also a capacitance to earth ground. This unintended capacitive coupling creates a shunt path taking away some energy that was intended for the lamp load. This causes reductions in the available open circuit voltage need to strike the lamp or a loss of preheating energy. Both cases lead to poor or erratic starting in the remote fixture(s).

For some multiple lamp ballasts, certain lamp leads are at higher potential and should be connected to lamps that reside in the same fixture as the ballast. The ballast manufacturer may have specific recommendations as to which of the lamp leads can be utilized for the remote fixture of a tandem set, and restrictions on how long the wiring from ballast to lamp may be. Ballasts may also have different permissible wiring lengths per lamp lead color based on the application. Remote mounting applications may permit a longer wiring length than some tandem applications as the remote situation presents a uniform loss to all lamp leads. The tandem operation scheme may present different capacitances to different lamp leads that could result in poor starting and differences in light level during operation.

In some cases, these issues are compounded because the interconnect whip is carrying wires connected to two different ballasts. Since the ballasts are not likely to be exactly in phase, there can be additional losses due to capacitive phase cancellation between leads of the two different ballasts. There may also be system interactions where either ballast will work fine separately, but will not work together. In these cases, the interconnect whip may need to be shorter, limiting the distance between the fixtures, or two separate whips could be used.

As the ballast operating frequency gets higher, the capacitive shunting effect become more pronounced. Dimming ballasts typically are at the highest frequency when in deep dimming. Due to the effects of capacitive losses, lamps may appear at different intensities or drop out and may flicker due to losses of cathode heating energy. It is recommended that dimming ballasts not be remote mounted or used in tandem operation, all lamp wiring must stay within the fixture containing the dimming ballast.

Energy saving lamps may be more susceptible to starting issues when used in remote or tandem fixture operation. These lamps utilize a gas mixture that does not ionize as easily as full wattage lamps, and are more likely to have starting issues due to the reduced starting voltage resulting from the capacitive losses.

Remote starting distances are specified at room temperature using standard life, full wattage lamps, with one ballast driving all lamps located in the remote fixture through a single conduit at the specified distance. In view of the possible differences related to any specific application, it is advised that any tandem or remote mount application using one or more ballasts be tested in the final configuration to ensure the system will perform as expected in the intended environment.

UltraMax® Professional Series Instant Start Multi-Voltage 120–277V High-Efficiency T8 Instant Start Ballasts For F17 (2 ft), F25 (3 ft), F32 (4 ft), F40 (5 ft) Lamps

72258 – GE132MAXP-L/ULTRA

UltraMax® P-Series Instant Start

Multi-Voltage High-Efficiency

1 – F32T8 120 to 277 "L" .77 BF UltraMax®P

- Energy-saving high-efficiency instant-start electronic ballast (>90%)
- Multi-voltage technology handles voltage from 120 to 277V
- UL Type CC Rating provides protection against arcing in electrical devices
- Anti-striation control for better light quality
- UL 55°C Ambient Temperature rating
- Cold temperature -22°F Minimum Starting Temperature

1 – F32T8 120 to 277 “N” .87 BF UltraMax®P

- Energy-saving high-efficiency instant-start electronic ballast (>90%)
- Multi-voltage technology handles voltage from 120 to 277V
- UL Type CC Rating provides protection against arcing in electrical devices
- Anti-striation control for better light quality
- UL 55°C Ambient Temperature rating
- Cold temperature -22°F Minimum Starting Temperature

| General characteristics | |
|------------------------------|--|
| Ballast Type | Electronic - High-Efficiency Multivolt Instant Start |
| Starting Method | Instant start |
| Lamp Wiring | |
| Line Voltage Regulation(+/-) | 10% |
| Ambient Temperature (MAX) | 55°C (131°F) |
| Case Temperature (MAX) | 70°C (158°F) |
| Ballast Factor | Normal |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | Anti-striation control, Auto-restart, Inherently Thermally Protected, UL Class P |

| Electrical characteristics | |
|----------------------------|-------------|
| Supply Current Frequency | 50 Hz/60 Hz |

| Order information | | | |
|-------------------|-------------|----------|---------|
| 10 Pack | Pallet Pack | DIY Pack | IP Pack |
| 72259 | | | |

| Dimensions | |
|--|------------------|
| Wiring diagram – LFL 1A – see example on Page 10-61 | |

UltraMax® Professional Series Instant Start Multi-Voltage 120–277V High-Efficiency T8 Instant Start Ballasts For F17 (2 ft), F25 (3 ft), F32 (4 ft), F40 (5 ft) Lamps

72266 – GE232MAXP-N/ULTRA

UltraMax® P-Series Instant Start

Multi-Voltage High-Efficiency

2 or 1 – F32T8 120 to 277 “N” .87 BF UltraMax®P

- Energy-saving high-efficiency instant-start electronic ballast (>90%)
- Multi-voltage technology handles voltage from 120 to 277V
- UL Type CC Rating provides protection against arcing in electrical devices
- Anti-striation control for better light quality
- UL 55°C Ambient Temperature rating
- Cold temperature -22°F Minimum Starting Temperature

| General characteristics | |
|------------------------------|--|
| Ballast Type | Electronic – High-Efficiency Multivolt Instant Start |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation(+/-) | 10% |
| Ambient Temperature (MAX) | 55°C (131°F) |
| Case Temperature (MAX) | 70°C (158°F) |
| Ballast Factor | Normal |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | Anti-striation control, Auto-restart, Inherently Thermally Protected, UL Class P |

| Electrical characteristics | |

UltraMax® Professional Series Instant Start Multi-Voltage 120–277V High-Efficiency T8 Instant Start Ballasts For F17 (2 ft), F25 (3 ft), F32 (4 ft), F40 (5 ft) Lamps

78621 – GE332MAXP-L/ULTRA

UltraMax® P-Series Instant Start
Multi-Voltage High-Efficiency
3 or 2 – F32T8 120 to 277 “L” .77 BF UltraMax®P

- Energy-saving high-efficiency instant-start electronic ballast (>90%)
- Multi-voltage technology handles voltage from 120 to 277V
- UL Type CC Rating provides protection against arcing in electrical devices
- Anti-striation control for better light quality
- UL 55°C Ambient Temperature rating
- Cold temperature -22°F Minimum Starting Temperature

General characteristics

| | |
|------------------------------|--|
| Ballast Type | Electronic – High-Efficiency Multivolt Instant Start |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation(+/-) | 10% |
| Ambient Temperature (MAX) | 55°C (131°F) |
| Case Temperature (MAX) | 70°C (158°F) |
| Ballast Factor | Low |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | Anti-striation control, Auto-restart, Inherently Thermally Protected, UL Class P |

Electrical characteristics

| | |
|--------------------------|-------------|
| Supply Current Frequency | 50 Hz/60 Hz |
|--------------------------|-------------|

Dimensions

Wiring diagram – LFL 1C – see example on Page 10-61
Case dimensions – Ref Drawing –A– see Page 10-62

| | |
|------------|------------------|
| Length (L) | 9.5 in (241 mm) |
| Width (W) | 1.3 in (33 mm) |
| Height (H) | 1.0 in (25.4 mm) |

Mounting dimensions

| | |
|--|-----------------|
| Mount Length (M) | 8.9 in (226 mm) |
| Mount Width (X or F) | 0.87 in (22 mm) |
| Mount Slots (MS) | 0.3 in (8 mm) |
| Weight | 0.8lbs |
| Exit Type | Side |
| Remote Mounting Distance to Lamp (F32T8) | 18 ft |
| Remote Mounting Wire Gauge | 18 AWG |

Lead lengths

| | |
|-------|----------------|
| Black | 25 in (635 mm) |
| White | 25 in (635 mm) |
| Blue | 31 in (787 mm) |
| Red | 37 in (940 mm) |

UltraMax® Professional Series Instant Start Multi-Voltage 120–277V High-Efficiency T8 Instant Start Ballasts For F17 (2 ft), F25 (3 ft), F32 (4 ft), F40 (5 ft) Lamps

71723 – GE432MAXP-H/ULTRA

UltraMax® P-Series Instant Start

Multi-Voltage High-Efficiency

4 or 3 – F32T8 120 to 277 “H” 1.18 BF UltraMax®P

- Energy-saving high-efficiency instant-start electronic ballast (>90%)
- Multi-voltage technology handles voltage from 120 to 277V
- UL Type CC Rating provides protection against arcing in electrical devices
- Anti-striation control for better light quality
- UL 55°C Ambient Temperature rating
- Cold temperature -22°F Minimum Starting Temperature

| General characteristics | |
|------------------------------|--|
| Ballast Type | Electronic – High-Efficiency Multivolt Instant Start |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation(+/-) | 10% |
| Ambient Temperature (MAX) | 55°C (131°F) |
| Case Temperature (MAX) | 90°C (194°F) |
| Ballast Factor | High |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | Anti-striation control, Auto-restart, Inherently Thermally Protected, UL Class P |

| Electrical characteristics | |

Safety and performance

UltraMax® Professional Series Instant Start Multi-Voltage 120–277V High-Efficiency T8 Instant Start Ballasts For F17 (2 ft), F25 (3 ft), F32 (4 ft), F40 (5 ft) Lamps

71423 – GE432MAXP-N+

UltraMax® P-Series Instant Start
Multi-Voltage High-Efficiency
4 or 3 – F32T8 120 to 277 “N+” 1.0 BF UltraMax®P

- Energy-saving high-efficiency instant-start electronic ballast (>90%)
- Multi-voltage technology handles voltage from 120 to 277V
- UL Type CC Rating provides protection against arcing in electrical devices
- Anti-striation control for better light quality
- Cold temperature -22°F Minimum Starting Temperature

| General characteristics | |
|------------------------------|--|
| Ballast Type | Electronic – High-Efficiency Multivolt Instant Start |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation(+/-) | 10% |
| Ambient Temperature (MAX) | 40°C (104°F) |
| Case Temperature (MAX) | 70°C (158°F) |
| Ballast Factor | Normal-High |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | Anti-striation control, Auto-restart, Inherently Thermally Protected, UL Class P |

Safety and performance

UltraMax® Professional Series MultiVolt High Output 120-277V T8 Instant Start Ballasts For 44-86W 4ft-8ft HO Lamps

63888 – GE286MAXP-HO-N

UltraMax® P-Series Multivolt High Output 120V-277V

2 or 1 – F96T8HO IS 120 to 277 “N” 0.87 BF

- High-performance electronic ballast for all general fluorescent applications
- Instant start electronic ballast for long lamp starting cycles and low initial cost
- Multi-voltage technology handles voltage from 120 to 277V
- Parallel lamp operation means system maintenance is easier to manage
- Anti-striation control for better light quality
- Cold temperature -22°F Minimum Starting Temperature

General characteristics

| | |
|------------------------------|--|
| Ballast Type | Electronic – Multivolt Instant Start |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation(+/-) | 10% |
| Ambient Temperature (MAX) | 40°C (104°F) |
| Case Temperature (MAX) | 70°C (158°F) |
| Ballast Factor | Normal |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | Auto-restart, Inherently Thermally Protected, UL Class P |

Safety and performance

 ICES-005 for EMI and RFI FCC – CLASS A Non-Consumer

 ANSI - C82.11 - Cons 2002, ANSI - C62.41 - 1991 Product is compliant with material restriction requirements of RoHS

UltraMax® Professional Series 347V High-Efficiency T8 Instant Start Ballasts

74095 – GE432MAXP347-N

UltraMax® P-Series 347V High-Efficiency

4 or 3 – F32T8 347V “N” 0.87 BF UltraMax®P

- Energy-saving high-efficiency instant-start electronic ballast (>90%)
- Instant start ballast for long lamp starting cycles and low initial cost
- Anti-striation control for better light quality
- Cold temperature -22°F Minimum Starting Temperature
- Parallel lamp operation means system maintenance is easier to manage

General characteristics

| | |
|------------------------------|--|
| Ballast Type | Electronic – High-Efficiency Instant Start |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation(+/-) | 10% |
| Ambient Temperature (MAX) | 40°C (104°F) |
| Case Temperature (MAX) | 70°C (158°F) |
| Ballast Factor | Normal |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | Anti-striation control, Auto-restart, Inherently Thermally Protected, UL Class P |

Electrical characteristics

| | |
|--------------------------|-------|
| Supply Current Frequency | 60 Hz |
|--------------------------|-------|

Safety and performance

- Energy-saving high-efficiency instant-start electronic ballast (>90%)
- Instant start ballast for long lamp starting cycles and low initial cost
- Anti-striation control for better light quality
- Cold temperature -22°F Minimum Starting Temperature
- Parallel lamp operation means system maintenance is easier to manage

UL 55°C Ambient Temperature rating 70°C max case temp 5 yr warranty or 90°C max case temp 3 yr warranty Product is compliant with material restriction requirements of RoHS

UltraMax® Professional Series 480V High-Efficiency T8 Instant Start Ballasts

62719 – GE332MAXP480-H

UltraMax® P-Series 480V High-Efficiency

3 or 2- F32T8 480V "H" 1.18 BF UltraMax®P

- Energy-saving high-efficiency instant-start electronic ballast (>90%)
- 3-Stage 3G Transient Suppression –line to line transient capability up to 6KV
- Anti-striation control for better light quality
- UL 55°C Ambient Temperature rating
- Cold temperature -22°F Minimum Starting Temperature

General characteristics

| | |
|------------------------------|--|
| Ballast Type | Electronic – High-Efficiency Instant Start |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation(+/-) | 10% |
| Ambient Temperature (MAX) | 55°C (131°F) |
| Case Temperature (MAX) | 90°C (194°F) |
| Ballast Factor | High |
| Power Factor Correction | Active |
| Sound Rating | A(20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | Anti-striation control, Auto-restart, Inherently Thermally Protected, UL Class P |

Electrical characteristics

| | |
|--------------------------|-------|
| Supply Current Frequency | 60 Hz |
|--------------------------|-------|

UltraMax® General Series T8 Multi-Voltage 120-277V

T8 Instant Start Ballasts For F17 (2 ft), F25 (3 ft), F32 (4 ft), F40 (5 ft) Lamps

72269 – GE132MAX-G-N (Replaces GE-132-MV-N)

UltraMax® G-Series T8 Multivolt 120V-277V

1 – F32T8 120 to 277 "N" .87 BF Multivolt UltraMax®G

- High-performance electronic ballast for all general fluorescent applications
- Instant start electronic ballast for long lamp starting cycles and low initial cost
- Multi-voltage technology handles voltage from 120 to 277V
- Parallel lamp operation means system maintenance is easier to manage
- Anti-striation control for better light quality
- Cold temperature -22°F Minimum Starting Temperature

Safety and performance

UltraMax® General Series T8 Multi-Voltage 120–277V

T8 Instant Start Ballasts For F17 (2 ft), F25 (3 ft), F32 (4 ft), F40 (5 ft) Lamps

72275 – GE232MAX-G-N (Replaces GE-232-MV-N)

UltraMax® G-Series T8 Multivolt 120V-277V

2 or 1 – F32T8 120 to 277 “N” .87 BF Multivolt UltraMax®G

- High-performance electronic ballast for all general fluorescent applications
- Instant start electronic ballast for long lamp starting cycles and low initial cost
- Multi-voltage technology handles voltage from 120 to 277V
- Parallel lamp operation means system maintenance is easier to manage
- Anti-striation control for better light quality
- Cold temperature -22°F Minimum Starting Temperature

Safety and performance

 FCC – CLASS A Non-Consumer

 Product is compliant with material restriction requirements of RoHS

UltraMax® General Series T8 Multi-Voltage 120-277V

T8 Instant Start Ballasts For F17 (2 ft), F25 (3 ft), F32 (4 ft), F40 (5 ft) Lamps

74456 – GE332MAX-G-N (Replaces GE332MV-N)

UltraMax® G-Series T8 Multivolt 120V-277V

3 or 2 – F32T8 120 to 277 “N” .87 BF Multivolt UltraMax®G

- High-performance electronic ballast for all general fluorescent applications
- Instant start electronic ballast for long lamp starting cycles and low initial cost
- Multi-voltage technology handles voltage from 120 to 277V
- Parallel lamp operation means system maintenance is easier to manage
- Anti-striation control for better light quality
- Cold temperature -22°F Minimum Starting Temperature

General characteristics

| | |
|------------------------------|--|
| Ballast Type | Electronic – Multivolt Instant Start |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation(+/-) | 10% |
| Ambient Temperature (MAX) | 40°C (104°F) |
| Case Temperature (MAX) | 70°C (158°F) |
| Ballast Factor | Normal |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | Anti-striation control, Auto-restart, Inherently Thermally Protected, UL Class P |

Safety and performance

UL Class P UL Type 1 Outdoor UL Type HL FCC – CLASS A Non-Consumer

Product is compliant with material restriction requirements of RoHS

UltraMax® General Series T8 Multi-Voltage 120–277V

T8 Instant Start Ballasts For F17 (2 ft), F25 (3 ft), F32 (4 ft), F40 (5 ft) Lamps

74463 – GE432MAX-G-N (Replaces GE432MV-N)

UltraMax® G-Series T8 Multivolt 120V-277V

4 or 3 – F32T8 120 to 277 “N” .87 BF Multivolt UltraMax®G

- High-performance electronic ballast for all general fluorescent applications
- Instant start electronic ballast for long lamp starting cycles and low initial cost
- Multi-voltage technology handles voltage from 120 to 277V
- Parallel lamp operation means system maintenance is easier to manage
- Anti-striation control for better light quality
- Cold temperature -22°F Minimum Starting Temperature

| General characteristics | |
|------------------------------|--|
| Ballast Type | Electronic - Multivolt Instant Start |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation(+/-) | 10% |
| Ambient Temperature (MAX) | 40°C (104°F) |
| Case Temperature (MAX) | 70°C (158°F) |
| Ballast Factor | Normal |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | Anti-striation control, Auto-restart, Inherently Thermally Protected, UL Class P |

Safety and performance

ANSI - C82.11 - Cons 2002, ANSI - C62.41 - 1991 Product is compliant with material restriction requirements of RoHS

UltraMax® General Series 347V Instant Start High Performance T8 Instant Start Ballasts

74105 – GE332MAX-G-347 (Replaces GE332-N-347)

UltraMax® G-Series 347V Instant Start High-Efficiency

3 or 2 – F32T8 347V “N” 0.87 BF UltraMax®G

- High-performance electronic ballast for all general fluorescent applications
- Instant start electronic ballast for long lamp starting cycles and low initial cost
- Light-weight, Slim Profile Mini Can Housing
- Parallel lamp operation means system maintenance is easier to manage
- Cold temperature 0°F Minimum Starting Temperature

General characteristics

| | |
|------------------------------|--|
| Ballast Type | Electronic – High-Efficiency Instant Start |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation(+/-) | 10% |
| Ambient Temperature (MAX) | 40°C (104°F) |
| Case Temperature (MAX) | 70°C (158°F) |
| Ballast Factor | Normal |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | Auto-restart, Inherently Thermally Protected, UL Class P |

Electrical characteristics

| | |
|--------------------------|-------|
| Supply Current Frequency | 60 Hz |
|--------------------------|-------|

- High-performance electronic ballast for all general fluorescent applications
- Instant start electronic ballast for long lamp starting cycles and low initial cost
- Lightweight, low-profile housing
- < 10% THD, > 99% power factor
- Parallel lamp operation means system maintenance is easier to manage
- Anti-striation control for better light quality, with no visible striations

Safety and performance

- Magnetic ballast construction for all general fluorescent lighting
- Extends lamp life in frequently switched applications
- Color coded ballast and package labels reduce misapplication errors (120V Yellow, 277V Red)
- Great for areas requiring no EMI/RFI noise
- Anti-striation control for better light quality, with no visible striations

75952 – GE132-MVPS-L

UltraStart® T8 Programmed Start

1 F32T8 120V-277V Low Watts .71 BF <10% THD UltraStart®

- A new generation of ultra-efficient Programmed Start ballasts
- Anti-striation circuitry reduces striations with energy saving lamps.
- Extends lamp life in frequently switched applications (>100,000 on/off cycles)
- Multi-voltage technology handles voltage from 120 to 277V
- Starting time visually the same as instant start
- Light-weight, Slim Profile Mini Can Housing

 NRCAN

High Temperature Rated: Suitable for high temperature applications 70C max case temp 5 yr warranty or 90C max case temp 3 yr warranty

- A new generation of ultra-efficient Programmed Start ballasts
- Extends lamp life in frequently switched applications (> 100,000 on/off cycles)
- Starting time visually the same as instant start
- Multi-voltage technology handles voltage from 120 to 277V
- Anti-striation circuitry reduces striations with energy saving lamps.

Safety and performance

High Temperature Rated: Suitable for high temperature applications 70°C max case temp 5 yr warranty or 90°C max case temp 3 yr warranty.

UltraStart® T8 120–277V Programmed Start

T8 Programmed Start Ballasts For F17 (2 ft), F25 (3 ft), F32 (4 ft) Lamps

29671 – GE-232-MVPS-XL

UltraStart® T8 Programmed Start
2 – F32T8 120V-277V Ultra Low Watt .60 BF <10% THD

- A new generation of ultra-efficient Programmed Start ballasts
- Extends lamp life in frequently switched applications (> 100,000 on/off cycles)
- Starting time visually the same as instant start
- Multi-voltage technology handles voltage from 120 to 277V (H and XL series)
- Parallel lamp operation means system maintenance is easier to manage
- Anti-striation circuitry reduces striations with energy saving lamps

General characteristics

| | |
|-------------------------------|--|
| Ballast Type | Electronic – Programmed / Rapid Start |
| Starting Method | Programmed start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation (+/-) | 10% |
| Ambient Temperature (MAX) | 105°F (41°C) |
| Case Temperature (MAX) | 70°C (158°F) |
| Ballast Factor | Ultra low |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Additional Info | Auto-restart, Inherently Thermally Protected, UL Class P |

Safety and performance Product is compliant with material restriction requirements of RoHS   ANSI – C62.41 FCC – CLASS A Non-Consumer    

- A new generation of ultra-efficient Programmed Start ballasts (> 90% efficiency)
- Extends lamp life in frequently switched applications (> 100,000 on/off cycles)
- Starting time visually the same as instant start
- Multi-voltage technology handles voltage from 120 to 277V (H and XL series)
- Parallel lamp operation means system maintenance is easier to manage
- Anti-striation circuitry reduces striations with energy saving lamps

Safety and performance

Product is compliant with material restriction requirements of RoHS ANSI – C62.41  UL Type 1 Outdoor  UL Type HL FCC – CLASS A Non-Consumer  UL Class P

cUL Listed  UL Listed 

High Temperature Rated: Suitable for high temperature applications 70°C max case temp 5 yr warranty or 90°C max case temp 3 yr warranty.

UltraStart® T8 120–277V Programmed Start

T8 Programmed Start Ballasts For F17 (2 ft), F25 (3 ft), F32 (4 ft) Lamps

62721 - GE232PS347-L

UltraStart® T8 Programmed Start

2 or 1 F32T8 347V Low Watt .71 BF UltraStart®

- A new generation of ultra-efficient Programmed Start ballasts (> 90% efficiency)
- Extends lamp life in frequently switched applications (> 100,000 on/off cycles)
- Starting time visually the same as instant start
- Parallel lamp operation means system maintenance is easier to manage
- Anti-striation circuitry reduces striations with energy saving lamps
- < 10% THD, > 99% power factor

| General characteristics | |
|-------------------------------|--|
| Ballast Type | Electronic – Program / Rapid Start |
| Starting Method | Programmed start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation (+/-) | 10% |
| Ambient Temperature (MAX) | |
| Case Temperature (MAX) | 70°C (158°F) |
| Ballast Factor | Low-PS (.71) |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Additional Info | Anti-striation control, Thermally protected, Universal voltage, TCLP compliant, Auto-restart |

| Electrical characteristics | |
|--------------------------------|-------------|
| Supply Current Frequency | 60 Hz |
| Supply Current Frequency (MIN) | 50 Hz/60 Hz |

UltraStart® T8 120–277V Programmed Start

T8 Programmed Start Ballasts For F17 (2 ft), F25 (3 ft), F32 (4 ft) Lamps

62726 - GE232PS347-H

UltraStart® T8 Programmed Start

2 or 1 F32T8 347V High Light 1.18 BF UltraStart®

- A new generation of ultra-efficient Programmed Start ballasts (> 90% efficiency)
- Extends lamp life in frequently switched applications (> 100,000 on/off cycles)
- Starting time visually the same as instant start
- Parallel lamp operation means system maintenance is easier to manage
- Anti-striation circuitry reduces striations with energy saving lamps
- < 10% THD, > 99% power factor

| General characteristics | |

Dimming Applications

UltraStart T8 Program Start Bi-level Switching Ballast 100% to 30% Light Output

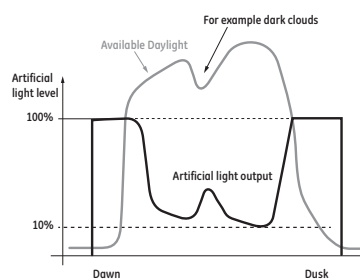

As ballast efficiency increases, controls and dimming ballasts will deliver the next level of energy savings. Proper installation and set up is needed to ensure the system will deliver the energy savings while maximizing lamp life. GE dimming ballasts are available for load shed as well as deep dimming operation. Dimming applications generally use full wattage lamps, but GE UltraMax® 28W lamps are also suitable for use on GE dimming ballasts. The ballast must be mounted in the same fixture as the lamps, no tandem or remote operation is permitted for programmed start dimming ballasts.

In order to achieve maximum lamp performance, the lamps should be seasoned at full power for 12 hours per NEMA guidelines prior to dimming operation. Ballasts for programmed start dimming must use rapid start type lampholders that accommodate two separate wires that connect one to each lamp pin. Shunted or shorted lampholders cannot be used with programmed start dimming systems. Load shed ballasts are instant start and can be used with shunted lampholders. The load shed ballast can be used in some tandem fixture applications with total lead length determined by the specific application.

GE programmed start dimming ballasts are compatible with 0-10V Class 1 or Class 2 wiring systems rated as ANSI Type 1. GE load shed ballasts feature step or variable 0-10V control. The step options include Class 1 compatible control and dual input leads for double switched applications such as classrooms.

Key Fluorescent Dimming Strategies

- Daylight harvesting.
Ideal for spaces occupied by users performing important stationary tasks, dimming enables the lighting system to reduce light output in response to daylight availability, saving energy.
- Adaptive compensation.
This strategy involves reducing light levels at night in spaces with non-critical tasks based on research that people prefer and need less light at night than during daytime.
- Demand response.
In this strategy, the control system responds to a signal from the local utility to reduce light levels during a grid emergency. The owner receives financial incentives such as special rates in return.

UltraStart® T8 100-3% Dimming Ballast in Normal and High Ballast Factor

GE UltraStart® 0-10V T8 electronic dimming fluorescent ballast offers the most efficient dimming system on the market today. They are available in 1-4 lamp normal ballast factor or 0.88 light output and 2-4 lamp high ballast factor or 1.18 light output for applications where more light is needed. UltraStart® dimming ballasts are multi-volt and operate in 120-277 voltage range.

Today's fixed light fluorescent systems are now 93% efficient and the next stage in additional energy savings is to either shut lights off with occupancy sensors or efficiently dim the lights with GE UltraStart® 0-10V dimming ballast. This ballast can be effectively incorporated in popular lighting energy reduction strategies such as daylight harvesting, load shedding and energy management systems to allow for a more affordable and flexible controllable lighting system.

UltraStart® T8 Program Start Bi-level Switching Ballast 100% to 30% Light Output

The new UltraStart® T8 hi-efficiency dimming ballast family dims from 100% to 30% light output. The ballast in the family operates at normal .88 ballast factor and low .78 ballast factors when used at 100% light output. We offer a 1- and 2-lamp ballast at normal light output, and 2-lamp ballast at low light output. The ballasts are designed to meet California Energy Efficiency Standards (Title 24) and ASRAE 2010 requirements for multi-level lighting. UltraStart® T8 Bi-level switching ballast reduce energy by over 50% when light is not needed and provides architectural dimming at 30% light output. The 1-lamp ballast is ideal for hallway and stairwell fixture applications and the 2-lamp L and N ballast are excellent applications for Office, School and Hospital patient rooms.

The Bi-level UltraStart® ballast is easy and inexpensive to install:

- The ballast can be switched manually by using 2 switch legs: the first switches on and the second switches off @ 30% light and both switches on for 100% light.
- Operates with a line voltage motion sensor when the space is not occupied
- Two black leads control the light level. Connection of both black leads to hot will result in 100% light. Connect 1 black lead to hot and dim to 30% light level.
- Can be switched between 100% and 30% continuously without reducing rated lamp life

UltraStart® T5 Program Start Step Dimming Ballast 100% to 35% Light Output:

Now available for F28T5 and F24T5HO lamps; Provides a simple solution to meet new California Title 24 reduced power requirements for locations that include corridors, stairwells, warehouses, classrooms, libraries, and parking garages.

0-10V Dimming Load Shed Instant Start Ballast

The 0-10V Dimming Load Shed Instant Start ballast is the second dimming ballast option from GE and can dim at any level between a high 1.18 ballast factor or 100% light to a low .71 ballast factor @ 60%.

It is also available in 2, 3, 4 and 6 lamp options.

Low voltage wiring is required to connect the ballast to the controller. A common low voltage wiring type is stranded- copper twisted pair 18AWG. Low voltage wiring is considered Class 2 and not recommended for placement in the same conduit as Class 1 wiring, which is the power, ground and neutral lines. Most codes allow Class 2 wiring to be run without conduit and junction boxes.

The user can save even more energy with this ballast because it is also compatible and warranted with F32/25, F28 and F32/WM energy efficient 4 ft T8 lamps. The ballast includes GE Patented anti-striation control capacitor that will prevent striations that are common for these lamps.

0-10V Dimming Load Shed Features:

- Operates using 0-10 VDC analog control dimmer and wiring – the most popular and cost efficient protocol
- Uses 4 wires: (hot and neutral) and two control wires (purple and gray) to control the voltage signal to the ballast. When the voltage is 10 VDC, then the lamps will be at full light output. As the voltage decreases, the ballast decreases light output. When the control voltage is 0 VDC, then the ballast will generate 60% light output.
- Compatible with 0-10V controllers that meet ANSI specifications

In addition to the outstanding operating efficiencies, these ballast are designed to operate in hot conditions. They are UL rated for operation in ambient temperatures of 55°C or 131°F, and feature UL Type CC Anti-Arc guard protection to prevent arcing if there is a bad or broken socket.

Both ballast are compliant with UL1598, which requires new and retrofitted fixtures to have ballasts with UL Type CC Anti Arc guard or special circle I sockets. Like all GE Electronic ballast, product is compliant with material restriction requirements of RoHS. The ballast operates utilizing 0-10 VDC analog control dimmer and wiring. This is the most popular and cost efficient protocol. The ballast uses 4 wires: (hot and neutral) and two control wires (purple and gray) to control the voltage signal to the ballast. When the voltage is 10 VDC then the lamp/ballast will be at full light output. As the voltage decreases the ballast decreases light out put. Low voltage wiring is required to connect the ballast to the controller. A common low voltage wiring type is stranded- copper twisted pair 18AWG. Low voltage wiring is considered Class 2 and not recommended for placement in the same conduit as Class 1 wiring, which is the power, ground and neutral lines. Most codes allow Class 2 wiring to be run without conduit and junction boxes. GE UltraStart® T8 dimming ballast is compatible with 0-10V controllers that meet ANSI specifications

GE UltraStart® 0-10V dimming ballast use less watts than other dimming ballast on the market today. Other dimming ballast manufacturers use more energy by continuously heating the lamps cathodes to maintain light. This is old technology. GE designed UltraStart® dimming ballast turn off the heat to the lamp cathodes after starting the lamp and keeps the heat off until dimmed to a 0.71 ballast factor. This saves watts through this range.

The Continuous Cathode cut-out technology allows for the essentially the same efficiency at 100% light output as our UltraMax® instant start and UltraStart® program start ballast. The ballast

is also in compliance with a new proposed standard from NEMA (National electrical manufacturers association) called NEMA-LL-9. This standard calls for cathode heating specifications on dimming levels from 35% light output to 1%. By maintaining these heating standards at lower dimming levels, we can assure the user of optimal lamp performance with minimal end blackening and full program start rated lamp warranties.

The new dimming ballast save money on maintenance cost because they operate in parallel. When a lamp fails in a multiple lamp fixture powered by GE's dimming ballast, the remaining lamps stay lit. The maintenance staff only needs to replace the failed lamp. In all other manufacturer's dimming ballast, if one lamp fails then the entire fixture will fail. The maintenance staff will typically replace all the lamps because they cannot identify the failed lamp.

Instant Start Bi-Level Switching Ballast

The new Instant Start Bi-Level Switching ballast operates at a high 1.18 ballast factor at 100% light output and can switch lamps to a low .71 ballast factor or 60% light output. The ballast is available in 2, 3, 4 and a 6-lamp configuration and is designed to reduce light levels within the fixture when maximum light levels are not needed.

The T8 UltraMax® 6-lamp Bi-level ballast has achieved 95% efficiency, setting new standards for ballast efficiency. The 4 and 6 lamp Bi-level ballast are perfect options for popular hi-bay fixtures and applications. Fixtures can dim when the space is not in use and lighted areas are maintained for safety and convenience. The 2 and 3 lamp Bi-level ballast are perfect for reducing lamps in a retrofitted fixture with the option of dimming the fixture when the light is not needed.

The user can save even more energy because the new ballast is compatible and warranted with F32/25, F28 and F32/WM energy efficient 4 ft T8 lamps. The ballast includes GE Patented anti-striation control capacitor that will prevent striations that are common for these lamps. The Bi-level switching ballast is the most efficient and easy to commission dimming option on the market today.

Bi-Level Switching Features:

- Can be operated manually with 2 switch legs: 1 switch on / 2 switch off @ 60% light and both switches on @ 100% light.
- Operates with a motion sensor and switch to the 60% light level when the space is not occupied
- Two black hot leads to control the light level. Connection of either black lead to hot will give 60% light level. Connection of both black leads to hot will result in 100% light level.
- Can be switched between 100% and 60% continuously without reducing rated lamp life.

UltraMax® Bi-Level (S60) Dimming and Load Shed (V60) Dimming

These extremely high efficiency multi-volt (120-277V) electronic ballasts offer the benefits of a low cost instant start design but the flexibility to dim from 100% to 60% or load shed dim with a 0-10V

controller anywhere between 100% and 60%. With F32T8 lamps there is a direct 40% energy reduction when dimming from 100% to 60% light level reduction. Lamp life is not impacted by dimming from high to low. For applications with more than 5 starts per day, a programmed start (PS) or PS dimming ballast is recommended.

GE Dimming Ballasts and NEMA LL-9

NEMA LL-9 is the first coordinated guidance on achieving industry lamp and ballast compatibility with T8 dimming systems and our UltraStart® T8 0-10V full range dimming ballasts are fully compliant. Parallel lamp operation ensures that each lamp is treated properly and within LL-9 specifications with consistent lamp-to-lamp results. Series wired dimming ballasts result in uneven cathode heating and inconsistent lamp to lamp performance and life. Using NEMA LL-9 compliant ballasts means adhering to an open standard that enables you to use different lamp and ballast manufacturers and still know that you will have a reliable system. The entire GE Dimming Ballast offering is NEMA LL-9 compliant. Demand it in your facility.

It is worth noting that when installing new fixtures with dimming capability or relamping with new lamps that GE recommends seasoning the lamps overnight at high ballast factor, or full light output, per NEMA guidelines.

Instant Start vs. Rapid Start Sockets

When using programmed start or dimming ballasts in fixtures, sockets must be 2-pin rapid start type. Fixtures with T8 instant start ballasts must use jumpered rapid start sockets or shunted lamp holders (internal to the lamp holder) that bridge the lamp bi-pins together into one contact on each side of the lamp. If retrofitting from a instant start ballast fixture with shunted sockets to a dimming or programmed start ballast, rapid start type sockets must be used to properly start lamps and maintain rated lamp life.

Safety and performance

UL Type 1 Outdoor

UL Type HL ANSI - C82.11 Cons 2002, ANSI - C62.41 - 1991

Product is compliant with material restriction requirements of RoHS

FCC - Part 18 (Class A) for EMI and RFI Non-Consumer Limits cUL Listed

UL Type CC High Temperature Rated: Suitable for high temperature applications

70C max case temp 5 yr warranty or 90C max case temp 3 yr warranty

UltraMax® Bi-Level Dimming & Load Shed Dimming Instant Start High-Efficiency T8 Dimming Ballasts

73233 – GE232MAX90-S60

UltraMax® Bi-Level Dimming Instant Start High-Efficiency

2 or 1 – F32T8 120 to 277 “H” 1.18 BF UltraMax® 100/60% step dim

- Bi-Level Switching 100 to 60%
- Anti-Striation Control for better light quality, with no striations.
- UL 55C Ambient Rating - High Temperature Protection Circuit
- Multi-Voltage Technology handles voltage from 120 to 277V
- UL Type CC Rating provides protection against arcing in electrical devices.
- Cold temperature -22F Minimum Starting Temperature

| General characteristics | |
|-------------------------------|---------------------------------|
| Ballast Type | Electronic - Dimming |
| Dimming Type | Continuous |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation (+/-) | 10 % |
| Ambient Temperature (MAX) | 55° C (131° F) |
| Case Temperature (MAX) | 70° C (158° F) |
| Ballast Factor | High (1.18) |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | No PCBs, Anti-striation control |

Safety and performance

 UL Type 1 Outdoor
  UL Type HL ANSI - C82.11 Cons 2002, ANSI - C62.41 - 1991
 Product is compliant with material restriction requirements of RoHS
 FCC – Part 18 (Class A) for EMI and RFI Non-Consumer Limits
  UL Type CC
 High Temperature Rated: Suitable for high temperature applications
 70C max case temp 5 yr warranty or 90C max case temp 3 yr warranty
 

UltraMax® Bi-Level Dimming & Load Shed Dimming Instant Start High-Efficiency T8 Dimming Ballasts

73229 – GE432MAX90-S60

UltraMax® Bi-Level Dimming Instant Start High-Efficiency

4 – F32T8 120 to 277 “H” 1.18 BF UltraMax® 100/60% step dim

- Bi-Level Switching 100 to 60%
- Anti-Striation Control for better light quality, with no striations.
- UL 55C Ambient Rating - High Temperature Protection Circuit
- Multi-Voltage Technology handles voltage from 120 to 277V
- UL Type CC Rating provides protection against arcing in electrical devices.
- Cold temperature -22F Minimum Starting Temperature

| General characteristics | |
|-------------------------------|--|
| Ballast Type | Electronic - Dimming |
| Dimming Type | Step dimming |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation (+/-) | 10 % |
| Ambient Temperature (MAX) | 55° C (131° F) |
| Case Temperature (MAX) | 70° C (158° F) |
| Ballast Factor | High (1.18) |
| Power Factor Correction | Active |
| Enclosure Type | Metal |
| Additional Info | Anti-striation control, Universal voltage, Inherent thermal protection |

Safety and performance

 UL Type 1 Outdoor
  UL Type HL ANSI - C82.11 Cons 2002, ANSI - C62.41 - 1991
 Product is compliant with material restriction requirements of RoHS
 FCC - Part 18 (Class A) for EMI and RFI Non-Consumer Limits
  UL Type CC
 High Temperature Rated: Suitable for high temperature applications
 70C max case temp 5 yr warranty or 90C max case temp 3 yr warranty
 

UltraMax® Bi-Level Dimming & Load Shed Dimming Instant Start High-Efficiency T8 Dimming Ballasts

73234 – GE232MAX90-V60

UltraMax® Load Shed Dimming Instant Start High-Efficiency

2 or 1 – F32T8 120 to 277 “H” 1.18 BF UltraMax® 0-10V 100-60% dim

- Load Shed Variable Dimming 0-10V 100% to 60%
- Anti-Striation Control for better light quality, with no striations.
- UL 55C Ambient Rating - High Temperature Protection Circuit
- Multi-Voltage Technology handles voltage from 120 to 277V
- UL Type CC Rating provides protection against arcing in electrical devices.
- Cold temperature -22F Minimum Starting Temperature

| General characteristics | |
|-------------------------------|---------------------------------|
| Ballast Type | Electronic - Dimming |
| Dimming Type | Continuous |
| Starting Method | Instant start |
| Lamp Wiring | Parallel |
| Line Voltage Regulation (+/-) | 10% |
| Ambient Temperature (MAX) | 55° C (131° F) |
| Case Temperature (MAX) | 70° C (158° F) |
| Ballast Factor | High (1.18) |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | No PCBs. Anti-striation control |

Programmed Start Dimming

1 – F32T8 120V-277V “N” .88 BF UltraStart® 0-10V Dimming 100-3%

- High Efficiency 100-3% 0-10V Programmed Start Dimming
- Multi-Voltage Technology handles voltage from 120 to 277V
- Parallel Lamp Operation - reliable deep dimming performance
- NEMA LL-9 Compliant - GE programmed start life and warranty ratings
- Anti-striation control for use with F32T8/WM or F28T8 Lamps
- UL Type CC rating provides protection against arcing in electrical devices
- UL 55C Ambient Rating - high temperature protection circuit
- Compatible with Class 1 or Class 2 LV 0-10VDC controllers

| General characteristics | |
|-------------------------------|--|
| Ballast Type | Electronic - Dimming |
| Starting Method | Programmed start |

Programmed Start Dimming

2 or 1 – F32T8 120V-277V High Light 1.18 BF UltraStart® 0-10V Dimming 100-3%

- High Efficiency 100-3% 0-10V Programmed Start Dimming
- Multi-Voltage Technology handles voltage from 120 to 277V
- Parallel Lamp Operation - reliable deep dimming performance
- NEMA LL-9 Compliant - GE programmed start life and warranty ratings
- Anti-striation control for use with F32T8/WM or F28T8 Lamps
- UL Type CC rating provides protection against arcing in electrical devices
- UL 55C Ambient Rating - high temperature protection circuit
- Compatible with Class 1 or Class 2 LV 0-10VDC controllers

Understanding T5 Electronic Programmed Start Ballasts

UltraStart® T5 programmed start ballasts for T5 fluorescent lamps.

GE has developed a line of T5 ballasts that incorporate the benefits of programmed start ballasts with the energy savings, fast starting and parallel lamp operation of instant start ballasts. GE's UltraStart® T5 ballasts use low energy loss, high efficiency components along with continuous cathode cutout (CCC) technology—resulting in 8 fewer watts than standard 4-lamp 54 watt T5 ballasts. GE's UltraStart® T5 ballasts offer a 44% improvement over standard T5 ballasts and a new industry threshold for high efficiency ballasts.

The GE UltraStart® Watt-Miser® T5 Lamp and Ballast System Advantage

- 18 watts lower than standard 4-lamp, 54 watt T5 systems with the same light output
- Operates lamps in parallel (which means if one lamp fails, the other lamps remain on)
 - significantly reduces lamp maintenance costs
- Fast starting programmed start ballast < 700 milliseconds compared to standard T5 at > 1.1 to 1.5 seconds

GE UltraStart® T5 programmed start ballasts use a control circuit to apply very precise cathode heat to ensure lamp cathodes have reached optimum temperature during lamp starting. Precise starting reduces the amount of cathode degradation associated with each start and increases lamp life significantly. After starting the lamps, continuous cathode cutout technology (CCC) is applied—which eliminates wasted power to the lamps, resulting in high efficiencies. GE UltraStart® systems also have the advantage of operating lamps in parallel. Parallel (versus series) lamp operation ballasts typically reduce spot relamping costs by 50% or extend group relamping by 15% or more due to average lamp mortality early failures.

T5 Lamps

GE T5 lamps can be electrically characterized into two groups:

High Efficiency (HE) Lamps (F14T5, F21T5, F28T5, F35T5 – standard, high-lumen and Watt-Miser®)

These lamps are high efficiency (HE), delivering around 100 lumens per watt and, while operating at the same lamp arc current, can be operated on the same ballast if the ballast system power and starting voltage are appropriate for the lamp load.

High Output (HO) Lamps (F24T5, F39T5, F54T5, F49T5, F80T5 – standard and Watt-Miser®)

These lamps are driven for high light output and are slightly less efficient (LPW) than HE lamps. They have unique lamp arc currents and starting voltages by wattage that require a specific ballast for each HO lamp wattage.

T5 High Efficiency – Rapid Start 120V Residential Ballast

80021 - GE28T5/2-120-RES

T5 High Efficiency - Rapid Start

Electronic ballast for (2) F28T5; or (2) F21T5; or (2) F14T5

- Line Voltage: 120 VAC, 60Hz
- Lamp End of Life Protection
- Rapid Start
- Normal Power Factor Correction

| General characteristics | |
|----------------------------|------------------------------|
| Starting Temperature (MIN) | -18°C (0°F) |
| Ambient Temperature (MAX) | 55°C (131°F) |
| Case Temperature (MAX) | 75°C (167°F) |
| Sound Rating | A |
| Remote Mounting | 18 ft max Lead Length, 18AWG |

| Dimensions | |
|--|-------------------|
| Wiring diagram – LFL 2a – see example on page 13-18 | |
| Case dimensions – Ref Drawing - | |
| Length (L) | 9 in (230 mm) |
| Width (W) | 0.88 in (22.5 mm) |
| Height (H) | 0.88 in (22.5 mm) |
| Mounting dimensions | |
| Mount Length (M) | 8.75 in (222 mm) |
| Weight | 0.67 lbs |
| Lead lengths Length (± 1 in) | |
| Black/White | 18 in (457 mm) |
| Blue | 27 in (686 mm) |
| Red | 27 in (686 mm) |
| Yellow | 27 in (686 mm) |

Safety and performance

Product is compliant with material restriction requirements of RoHS  UL Type 1 Outdoor  UL Type HL FCC – CLASS A Non-Consumer ANSI-C62.41-1991

ANSI-C82.11-Cons 2002  UL Class P  UL Type CC  UL Listed  CSA

High Temperature Rated: Suitable for high temperature applications 70C max case temp 5 yr warranty or 90C max case temp 3 yr warranty

T5 High Output – Programmed Start

T5 Electronic Programmed Start For T5 HO Lamps*

94131 – GE454MVPS90-E-S (replaces 73192)

T5 High Output - UltraStart® Programmed Start

4/2 – F54T5HO 120 to 277 UltraStart® PRS High Temp E Can

- High Efficiency T5 ballast with Continuous Cathode Cutout Technology
- Lower Maintenance Costs with Parallel Lamp Operation
- Multi-Voltage technology means a single ballast handles voltage from 108V to 305V
- Auto-Restart withstands temporary losses in power without the need to cycle power
- UltraCool® Operation 90°C case rating
- Anti-Striation Control for better light quality, with no striations.
- Individual lamp End of Lamp Life protection - only one lamp shuts down at end of life.
- Cold temperature -20F Minimum Starting Temperature
- The ballast should have the step dimming features and be able to provide 50% input power (+/-15%) in the dimming mode by shutdown 2 of the 4 lamps.

T5 High Output – Programmed Start

T5 Electronic Programmed Start For T5 HO Lamps*

72280 – GE180MVPS-D

T5 High Output - UltraStart® Programmed Start

1 – F80T5HO 120 to 277 UltraStart® PRS D Can

- High Efficiency T5 ballast with Continuous Cathode Cutout Technology
- Lower Maintenance Costs with Parallel Lamp Operation
- Fast Starting Time <700ms
- Multi-Voltage technology means a single ballast handles voltage from 108V to 305V
- Auto-Restart withstands temporary losses in power without the need to cycle power
- Anti-Striation Control for better light quality, with no striations.
- Cold temperature -20°F Minimum Starting Temperature

General characteristics

| | |
|-------------------------------|--|
| Ballast Type | Electronic - Program / Rapid Start |
| Starting Method | Programmed start |
| Line Voltage Regulation (+/-) | 10% |
| Ambient Temperature (MAX) | 55°C (131°F) |
| Case Temperature (MAX) | 70°C (158°F) |
| Ballast Factor | Normal |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Enclosure Type | Metal |
| Additional Info | Auto-restart, End of Life Protection (EOL), Thermally protected, Universal voltage |

Product is compliant with material restriction requirements of RoHS UL Type 1 Outdoor UL Type HL FCC - CLASS A Non-Consumer ANSI-C62.41-1991 ANSI-C82.11-Cons 2002

ANSI-C62.41-2002 UL Class P UL Type CC UL 55C Ambient Approved

High Temperature Rated: Suitable for high temperature applications No PCB's

T5 Watt-Miser Electronic Program / Rapid Start Ballast

T5 Electronic Programmed Start

62731 – GE454PS347-E

T5 High Output - UltraStart® Programmed Rapid Start

4-1 - F54T5HO 347V LFL E Can

- High Efficiency T5 ballast with Continuous Cathode Cutout Technology
- Lower Maintenance Costs with Parallel Lamp Operation
- Fast Starting Time <700ms
- Auto-Restart withstands temporary losses in power without the need to cycle power
- Anti-Striation Control for better light quality, with no striations.
- 90°C case rating/UL Approved 55C Ambient Rating
- Individual lamp End of Lamp Life protection - only one lamp shuts down at end of life
- Cold temperature -20°F Minimum Starting Temperature

| General characteristics | |

74119 – GETR480/277-250W

Step Down Transformers

Non-Isolated Autotransformer 480 to 277V, <250 Watts (VA), A Can

- Precision-wound coils, ensuring even heat dissipation and the highest electrical integrity.
- Non-Isolated Autotransformer designed specifically for lighting applications to step down 480V to 277V
- For use with one or more electronic 277V or universal voltage ballasts within max total system power of autotransformer
- 480Vrms Input, 60Hz Only, 277Vrms Full Load Output or 347Vrms Input
- For loads with total system power <250VA
- Internal Auto Reset Thermal Protector Rated 100C
- For use on single phase or ground referred systems
- Five Year Limited Warranty
- 93% electrical efficiency

Understanding T12 Electronic Ballasts

Electronic T12

GE multivolt and dedicated voltage ProLine® T12 high-performance ballasts are designed for replacement of magnetic T12 electronic ballasts during maintenance or retrofits. GE multivolt ProLine® T12 ballasts have the same wiring and mounting requirements as standard magnetic ballasts and provide up to 20% energy savings by simply replacing the ballast.

The DOE ballast ruling effective April 1, 2005, prevents the sale of 4 foot and 8 foot lamp electromagnetic ballasts that operate T12 lamps and do not meet federal ballast efficiency requirements. GE ProLine® T12 electronic ballasts meet the DOE minimum ballast efficiency requirements and also allow facility managers to reduce ballast maintenance inventories by consolidating the number of ballasts needed. GE ProLine® T12 ballasts operate both energy-saving and standard wattage lamps and are also multi-voltage (120-277V). With 2 ballasts, the multi-voltage ProLine® T12 can consolidate over 40 different magnetic ballasts.

Performance Features

- GE240RSMVN and GE240RS120 comply with FCC for residential use
- Low-profile and lightweight housing simplifies installation and reduces transportation costs (GE240 = 1.3 lbs. lighter than magnetic; GE260 = 5.3 lbs. lighter than magnetic)
- Parallel operation — if one lamp fails, others remain lit
- Significantly quieter than magnetic
- High-frequency operation virtually eliminates lamp flickering typical in T12 electromagnetic systems
- Five-year limited ballast warranty

Electromagnetic T12

- Complete line of ballasts for 2-to-8 foot lamps, circleline and high-output lamps
- 100% thermally protected
- High-grade lamination steel assures lowest wattage loss
- UL, CSA and/or cUL approved
- 888-GEBALLAST on every ballast
- Two-year limited ballast warranty

Color-Coded Ballast and Outer Box Labels

120V – Yellow
277V – Red

Packaging

- Standard 10 packs
- IP Packs – individually packed with instructions
- DIY – shrink-wrapped and tray-packed with instructions

Safety and performance

- Magnetic ballast construction for all general fluorescent lighting

- Extends lamp life in frequently switched applications
- Color-coded ballast and package labels reduce misapplication errors (120V Yellow, 277V Red)

Understanding Compact Fluorescent Ballasts

GE compact fluorescent (CFL) ballasts provide energy saving alternatives to halogen, incandescent or HID light sources. GE Multivolt ProLine® CFL programmed start ballasts combine universal voltage (108-305V) technology with multi-lamp capability, dual entry color-coded connectors and ultra system reliability to create an industry leading CFL solution for commercial and residential applications.

UltraMax® and UltraStart® High Lumen Biax® ballasts with the High Lumen WattMiser® Biax® lamp provides the perfect solution for high efficiency and high lumen output in a small space.

UltraMax® Instant Start Ballasts:

- For use in long burn cycles (>10 hr cycles) to maintain lamp life
- High efficiency (>90%) design
- Universal voltage (120-277V)
- Striation control circuitry
- Small compact housing

UltraStart® Programmed Start Ballasts:

- For use in shorter burn cycles (<3 hr cycles) to extend lamp life
- High efficiency (>90%) cathode cutout design
- Universal voltage (120-277V)
- Striation control circuitry
- Small compact housing
- Parallel lamp operation
- <700ms fast starting time
- Ballasts available for both F40/30W and F40/25W lamps

Multivolt ProLine® CFL ballasts are offered in three different configurations:

1) -SE description – dual entry (side or bottom) connectors, 2) -BES – bottom entry with studs for mounting to junction boxes and 3) -3W – 3-way mounting kits that allow you to have all three mounting options with one kit.

Multivolt ProLine® CFL ballasts come with a five-year ballast and one-year lamp limited warranty. These ballasts also meet the EPA's ENERGY STAR® fixture program requirements with a Consumer Class B EMI rating for residential applications, as well as a high power factor ballast design.

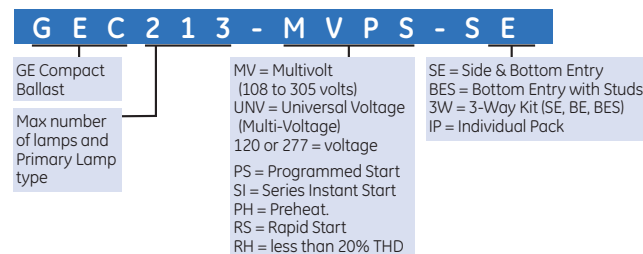

Use the GE Multivolt ProLine® CFL Multi-Lamp compatibility chart (page 17-3) to find the right ballast for your need.

ProLine® CFL Date Code System

Date Code Format: 01 200801 = Week2008 = Year

UltraMax® and UltraStart® Biax® ballasts have the same date code system as all linear fluorescent ballasts.

ProLine® CFL Electronic Ballasts

Compact Fluorescent Ballasts For 13 – 70W T4 CFL Lamps

63091 – GEC213-MVPS-BES
63092 – GEC213-MVPS-SE
63089 – GEC213-MVPS-3W

ProLine® CFL Electronic Ballasts
 2 or 1 – CFQ13W/G24q 120-227V ProLine® PS

- Multi-voltage technology means a single ballast handles voltage from 108V to 305V
- Programmed starting for extended lamp life
- End-of-Lamp-Life protection
- Color coded poke-in connectors simplifies wiring

| General characteristics | |
|-------------------------------|--|
| Ballast Type | Electronic – Program / Rapid Start |
| Starting Method | Programmed start |
| Lamp Wiring | Series |
| Line Voltage Regulation (+/-) | 10% |
| Ambient Temperature (MAX) | 104°F (40°C) |
| Case Temperature (MAX) | 70 °C (158 °F) |
| Ballast Factor | Normal |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Additional Info | End-of-Life Protection (EOL), Thermally protected, Universal voltage |

| Electrical characteristics | |
|----------------------------|-------------|
| Supply Current Frequency | 50 Hz/60 Hz |

| Order information | | | |
|---------------------|-------------|----------|---------|
| 10 Pack | Pallet Pack | DIY Pack | IP Pack |
| 63089, 63092, 63091 | | | |

Safety and performance

FCC Part 18 Class B  UL Class P  UL Type 1 Outdoor No PCB's ANSI Standard C82.11-Cons 2002 ANSI Standard C62.41-1991

- Multi-voltage technology means a single ballast handles voltage from 108V to 305V
- Programmed starting for extended lamp life
- End-of-Lamp-Life protection
- Color coded poke-in connectors simplifies wiring

High-Lumen Biax® UltraMax® Instant Start

1 – FT40W-25W/2G11 Biax - 120-277V UltraMax® Instant Start

- Electronic compact fluorescent ballasts for all general fluorescent applications
- Low-profile case
- Multi-Voltage technology handles voltage from 120 to 277V
- Instant start electronic ballast for long lamp starting cycles and low initial cost
- Anti-Striation Control for better light quality, with no striations
- Lamp End-of-Life Safety Shutdown Circuit with Re-Lamping Auto-reset

| General characteristics | |
|-------------------------------|---|
| Ballast Type | Electronic – Standard Instant Start |
| Starting Method | Instant start |
| Lamp Wiring | |
| Line Voltage Regulation (+/-) | 10% |
| Ambient Temperature (MAX) | 105°F (41°C) |
| Case Temperature (MAX) | 70 °C (158 °F) |
| Ballast Factor | Normal |
| Power Factor Correction | Active |
| Sound Rating | A (20-24 decibels) |
| Additional Info | End-of-Life Protection (EOL), Thermally protected |

| Electrical characteristics | |

Understanding Electronic UltraMax® HID Ballasts

GE offers a complete line of electronic ballasts for HID lighting systems. Electronic HID, like **electronic fluorescent systems that preceded it**, significantly improve the performance of HID lighting. Electronic UltraMax® eHID Ballasts use solid-state components to start and operate HID lamps. Electronic eHID ballasts use IC chips to control and give feedback for optimal performance of the lighting system. GE eHID ballasts improve the efficiency, maintain higher lumens, enhance lamp life and color control, and operate more quietly than the magnetic core and coil ballast that they replace.

GE's line of UltraCool™ UltraMax® eHID ballasts can provide up to 70% energy savings and four times the life of standard halogen. End users can meet strict watts per square foot requirements while achieving significant wattage savings and color control with ceramic metal halide lamps and GE eHID ballasts.

GE's UltraMax® eHID ballasts operate **only pulse start and ceramic metal halide lamps**. **GE UltraMax® eHID ballasts operate lamps at a low frequency square wave** to maximize lamp performance. Extensive analysis of all brands of lamps suggests that the most compatible driving waveform for an electronic HID electronic ballast is a low-frequency squared wave (L.F.S.W.) with higher order harmonic content. L.F.S.W. has been established as a dependable method of ballasting low-wattage HID lamps with significant industry support. Analysis of lamp data has shown that there are limited operating bands between 1 kHz to 200 kHz in which electronic ballast could operate a lamp wattage family without causing unacceptable arc instability due to acoustic resonance. GE's UltraMax® eHID constantly measures and adjusts the wattage, optimizing the ceramic metal halide lamp performance.

GE high-wattage eHID ballasts will operate 250, 300, 320,350 or 400 watt pulse start or ceramic metal halide lamps with one ballast. The eHID Ballast with a PulseArc lamp will produce 70% more lumens per watt than the obsolete probe start magnetic core and coil system. Variable dimming to 50% power reduction is an option with GE eHID high wattage ballast.

Understanding Electromagnetic HID Ballasts

GE offers High Intensity Discharge (HID) ballasts for mercury, probe start metal halide, pulse start metal halide and high pressure sodium lamps. Standard metal halide lamps or probe start metal halide over 150 watts, like fluorescent, are electric discharge lamps and require an open circuit voltage of nearly two times the operating voltage to initiate the arc between the two electrodes in the arc tube. High pressure sodium, pulse start metal halide and probe start metal halide lamps 150 watts or less require an igniter to initiate the high voltage to start the lamps. The ballasts provide the starting voltage with the igniter, where required, and provides stability for the lamp. HID lamps have negative impedance characteristics and would draw current until destruction unless a ballast was in place to regulate the current.

HID lamps take several minutes to warm-up and reach full light output. If power is interrupted between the lamp and the ballast, the arc will extinguish and lamp will go out. The lamp must cool down and reduce the vapor pressure before it will re-start. Typical warm-up and restrike times are as follows:

| Light Source | Warm-Up Time | Restrike Time |
|----------------------------|--------------|---------------|
| Metal Halide (Probe Start) | 3-4 minutes | 10-20 minutes |
| Metal Halide (Pulse Start) | 2 minutes | 3-4 minutes |
| High Pressure Sodium | 7-10 minutes | 1/2-1 minute |

GE HID Ballast Types

CORE AND COIL

The most common HID ballasts are the core and coil and is used in 90% of the fixture applications. Core and coil ballasts consist of one, two or three copper (or aluminum) coils on a core of electrical-grade steel laminations. HID ballasts are classified by the kind of circuit they use: Reactor (R), High Reactance autotransformer (HX), Constant Wattage Autotransformer (CWA), Regulated lag (Reg Lag) or Electronic. HID ballast are also classified as high power factor (HPF) or normal power factor (NPF).

GE HID ballast 150 watts or less have High Reactance Autotransformer circuits and high power factor (HX-HPF). GE HID ballast greater that 150 watts have Constant Wattage Autotransformer circuits and are high power factor (HPF).

CWA ballast is the most common circuit for core and coil ballast. CWA circuits provide for stable light regulation. The CWA circuit consists of a high reactance autotransformer with a capacitor in series with the lamp resulting with high power factor ballast. In most CWA ballast circuits a 10% drop in line voltage will only reduce the light output and wattage by 5%. The CWA circuit ballast requires an igniter for QMH pulse start, ceramic metal halide and HPS lamps. Igniters are also required for QMH lamps 150 watts or less.

Distributor Ballast Kits

GE stocks a comprehensive inventory of **quad and 5-tap HID voltage ballast kits**. The kits contain the appropriate core and coil, capacitor, ignitor (where required), mounting bracket, mounting hardware and instructions to allow the stocking distributor to meet the needs of their customer while minimizing their investment in component parts. The quad ballast kit has color-coded leads to identify voltages and operates at 120/208/240/277. **The 5-tap HID ballast kits also include 480-volt applications** and are listed as ML5, though GE also offers single-voltage kits for 480-volt with 120-volt taps for stand-by lighting.

Also available for metal halide and high pressure sodium applications is the **5-tap ballast-lamp replacement kit listed as -55**. This easy-to-carry, convenient, all-in-one kit, ensures ballast-lamp compatibility by including the lamp as well.

Ignitors and capacitors, where required, are included with the quad and 5-tap ballast kits.

Capacitors

Most GE capacitors and ignitors are sold in ballast kits that come pre-wired and reduce labor cost. Capacitors and ignitors are also sold separately.

Power factor capacitors are used to reduce the negative effects that inductive devices (HID ballast) have on power factor ratings. GE sells a complete line of capacitors that must be properly matched to the lamp and HID ballast. GE capacitors have bleed-in resistors and use biodegradable, nontoxic (no PCBs) dielectric fluid.

GE Oil-filled Capacitors are packaged in metal cases (up to 520V ratings). All GE capacitors are designed for 60,000 hours of continuous life.

Dry Capacitors do not contain oil and are manufactured with plastic casing. Dry casings are rated up 100°C maximum.

Dry capacitors are designed and rated for AC voltages below 400V at 50 or 60Hz.

Ignitors

Ignitors are also sold in individual cartons for replacement needs. Ignitors supply a high voltage pulse to ionize the gas creating the glow discharge. Once the lamp is started the ignitor stops providing the pulse. Ignitors are designed to last thousand of hours; however, if the lamp fails or the socket is empty, the ignitor will continue to pulse. The lamps should be replaced or the fixture turned off to prevent premature failure of the ignitor.

Standard ignitors are supplied with metal halide ballast 150 watts or less, pulse start metal halide and high-pressure sodium ballast. There are several different ignitors that meet the needs of many GE lamp and ballast combinations. The appropriate ignitor is listed in the catalog under the ballast specifications.

Potted Core and Coil Ballast

GE potted core and coil ballasts are designed for applications requiring quieter or cooler operation than provided by standard coil and coil ballast. The potting material is sand-filled polyester which provides excellent sound-deadening and heat-transfer qualities.

F-Can Ballast

GE F-Can ballast is recommended for indoor applications and where ballast noise must be minimized. F-Can ballast are encased in fluorescent ballast-type cans and potted with asphalt insulating materials to minimize noise.

Ballast Date and Temperature Codes

Date Codes

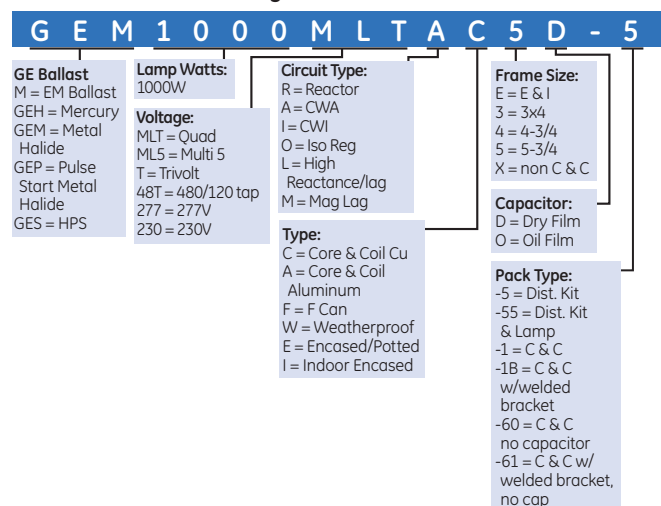

GE HID core and coil ballast manufacturing date codes are located on the top end of the core. They are printed in white and indicate year, month manufactured, and order the ballast was manufactured in the month. A code of 070100001 would indicate manufacture date of 07 (year 2007), 01 (month of January), and 00001 would be the manufacturing sequence.

UL Bench Top Temperature Code

To help with UL inspection, the UL Bench top code is listed on the GE label on the core and coil ballast as 1029X. X is the temperature code and represented by the following temperature classifications: A, B, C, D, E and F.

| UL Bench Top Letter Code | Temperature Range for Class H (180C) Ballast |
|--------------------------|--|
| A | Less than 75C |
| B | 75C < 80C |
| C | 80C < 85C |
| D | 85C < 90C |
| E | 90C < 95C |
| F | 95C < 100C |

Safety and performance

UL Type 1 Outdoor ANSI - C82.14-2006 Suitable for recessed use Short Circuit Protection Inherent Thermal Protection cUL Listed Product is compliant with material restriction requirements of RoHS

- Superior low frequency square wave frequency design maximizes performance and life of ceramic metal halide lamps.
- 15% Energy savings vs magnetic HID ballasts in retrofits
- Lamp life 4x the life of halogen: 12K vs 3K
- Improves lumen maintenance vs magnetic
- Excellent color control with GE CMH & tight line regulation
- 2% line regulation minimizes lamp to lamp color variation
- Multi-Voltage Technology handles voltage from 120 to 277V
- End-of-Lamp-Life Protection

GE Lighttech™ LED Drivers and Halogen Transformers

One of the most trusted names in lighting is now powering even more innovative lighting solutions. We've combined our leadership, knowledge and experience to bring you effective, reliable GE Lighttech™ LED Drivers and Halogen Transformers. Create next-generation lighting systems that push the boundaries of performance and redefine efficiency. Plus, you'll receive the convenience and ease of getting your drivers and transformers from the same source as your lamps and ballasts.

Key applications include signage, architectural, downlight, track lighting and much more.

Full Phase Control Dimmable Drivers

- Dimmable with most LEADING EDGE (Triac) and TRAILING EDGE (ELV) dimmers
- Deep dimming to 1%
- Wide power range (4-36W)
- High power factor
- Efficient
- Side Lead and Bottom Feed versions available
- cULus Recognized, Class 2, 47 CFR Part 15, Class B (Consumer)

Trailing Edge Dimmable Drivers

- Dimmable with TRAILING EDGE (ELV) dimmers
- Dimming to 10%
- Wide power range (4-36W)
- Universal input voltage (120-277V)
- High power factor
- Highly efficient
- Side Lead and Bottom Feed versions available
- Small case size
- cULus Recognized, Class 2, 47 CFR Part 15, Class B (Consumer)

Low-voltage Halogen Electronic Transformers

GE Lighttech™ transformers offer outstanding dependability and efficiency, from smarter technology to longer life cycles, and everything in between. Features include:

- Utilizes a unique Auto-Thermal Regulation process – proportional dimming of output voltage over 90°C
- Self-preserving 125°C Thermal Cut-off
- Embedded technology to run cool with higher efficiency – 95% at full load
- Field-effect transistors – resulting in higher efficiency, smaller size and longer life than products with bipolar transistors

Halogen Transformers

LED Drivers and Halogen Transformers

66961 –

Halogen Transformer

60W Class 2 Plug-In Electronic Transformer. 12V. Black.

| General characteristics | |
|--------------------------|------------------------|
| Output Type | AC, Class 2 compliance |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.96 |
| Efficiency (%) | 90 |
| Output voltage (V) | 11.5 |
| Output Wattage Range (W) | 20-60 |
| Dimmability | - |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

66962 –

Halogen Transformer

60W Class 2 Plug-In Electronic Transformer. 12V. White.

| General characteristics | |
|--------------------------|------------------------|
| Output Type | AC, Class 2 compliance |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.96 |
| Efficiency (%) | 90 |
| Output voltage (V) | 11.5 |
| Output Wattage Range (W) | 20-60 |
| Dimmability | - |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

66936 –

Halogen Transformer

60W Class 2 Electronic Transformer. 12V. Bottom Feed.

| General characteristics | |
|--------------------------|------------------------|
| Output Type | AC, Class 2 compliance |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.96 |
| Efficiency (%) | 95 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-60 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

Halogen Transformers

LED Drivers and Halogen Transformers

66937 –

Halogen Transformer

60W Class 2 Electronic Transformer. 12V.

| General characteristics | |
|--------------------------|------------------------|
| Output Type | AC, Class 2 compliance |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.96 |
| Efficiency (%) | 94 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-60 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

| Dimensions | |
|--|------|
| Wiring diagram – see example A on page 19-30 | |
| Casing length (in) | 2.09 |
| Casing width (in) | 1.30 |
| Casing height (in) | 0.79 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.22 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.9 |
| Output wire length (in) | 5.5 |

66938 –

Halogen Transformer

60W Class 2 Electronic Transformer. 11.7V. 2.5W minimum load.

| General characteristics | |
|--------------------------|------------------------|
| Output Type | AC, Class 2 compliance |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.96 |
| Efficiency (%) | 94 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 2.5-60 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

| Dimensions | |
|--|------|
| Wiring diagram – see example A on page 19-30 | |
| Casing length (in) | 2.09 |
| Casing width (in) | 1.3 |
| Casing height (in) | 0.79 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.22 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.9 |
| Output wire length (in) | 5.5 |

66939 –

Halogen Transformer

60W Class 2 Electronic Transformer. 12V. Dimming Loop.

| General characteristics | |
|--------------------------|------------------------|
| Output Type | AC, Class 2 compliance |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 60 |
| Power Factor Correction | 0.96 |
| Efficiency (%) | 94 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-60 |
| Dimmability | 0-10V |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

| Dimensions | |
|--|------|
| Wiring diagram – see example D on page 19-30 | |
| Casing length (in) | 2.09 |
| Casing width (in) | 1.3 |
| Casing height (in) | 0.79 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.22 |
| Lead Exit Type | Side |
| Input wire length (in) | 8.7 |
| Output wire length (in) | 5.5 |

Halogen Transformers

LED Drivers and Halogen Transformers

66940 –

Halogen Transformer

60W Class 2 Electronic Transformer. 12V. Potentiometer on Dimming Loop.

| General characteristics | |
|--------------------------|------------------------|
| Output Type | AC, Class 2 compliance |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 60 |
| Power Factor Correction | 0.96 |
| Efficiency (%) | 94 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-60 |
| Dimmability | 0-10V |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example D on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 2.09 |
| Casing width (in) | 1.3 |
| Casing height (in) | 0.79 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.22 |
| Lead Exit Type | Side |
| Input wire length (in) | 8.7 |
| Output wire length (in) | 5.5 |

66943 –

Halogen Transformer

60W Class 2 Electronic Transformer. 12V. Ground Wire. Double-Sided Tape.

| General characteristics | |
|--------------------------|------------------------|
| Output Type | AC, Class 2 compliance |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 60 |
| Power Factor Correction | 0.96 |
| Efficiency (%) | 94 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-60 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example E on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 2.09 |
| Casing width (in) | 1.30 |
| Casing height (in) | 0.79 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.22 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.9 |
| Output wire length (in) | 5.5 |

66963 –

Halogen Transformer

60W Class 2 Electronic Transformer. 12V. In Secondary Housing.

| General characteristics | |
|--------------------------|------------------------|
| Output Type | AC, Class 2 compliance |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.96 |
| Efficiency (%) | 94 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-60 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example A on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 6.5 |
| Casing width (in) | 1.7 |
| Casing height (in) | 1.42 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.75 |

Halogen Transformers

LED Drivers and Halogen Transformers

66945 –

Halogen Transformer

75W Electronic Transformer. 12V.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | 95 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-75 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

66967 –

Halogen Transformer

75W Electronic Transformer. Mounting Tab.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | 95 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-75 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

66946 –

Halogen Transformer

75W Electronic Transformer. 12V. Bottom Feed.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | 95 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-75 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

| Dimensions | |
|--|------|
| Wiring diagram – see example A on page 19-30 | |
| Casing length (in) | 2.1 |
| Casing width (in) | 1.3 |
| Casing height (in) | 0.79 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.22 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.9 |
| Output wire length (in) | 5.5 |

| Dimensions | |
|--|------|
| Wiring diagram – see example A on page 19-30 | |
| Casing length (in) | 2.4 |
| Casing width (in) | 1.3 |
| Casing height (in) | 0.79 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.22 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.9 |
| Output wire length (in) | 5.9 |

| Dimensions | |
|--|--------|
| Wiring diagram – see example A on page 19-30 | |
| Casing length (in) | 2.36 |
| Casing width (in) | 1.32 |
| Casing height (in) | 0.87 |
| Mounting Dims (in) | 2.0 |
| Weight (lb) | 0.22 |
| Lead Exit Type | Bottom |
| Input wire length (in) | 7.3 |
| Output wire length (in) | 5.5 |

Halogen Transformers

LED Drivers and Halogen Transformers

66947 –

Halogen Transformer

75W Electronic Transformer. 12V. Ground Wire.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | 95 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-75 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example E on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 2.1 |
| Casing width (in) | 1.3 |
| Casing height (in) | 0.79 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.22 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.9 |
| Output wire length (in) | 5.5 |

66948 –

Halogen Transformer

75W Electronic Transformer. 12V. Double-Sided Tape.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | 95 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-75 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example A on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 2.1 |
| Casing width (in) | 1.3 |
| Casing height (in) | 0.79 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.22 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.9 |
| Output wire length (in) | 5.5 |

66951 –

Halogen Transformer

75W Electronic Transformer. 24V.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | 95 |
| Output voltage (V) | 23.2 |
| Output Wattage Range (W) | 20-75 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example F on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 2.1 |
| Casing width (in) | 1.3 |
| Casing height (in) | 0.79 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.22 |
| Lead Exit Type | Side |
| Input wire length (in) | 6.0 |
| Output wire length (in) | 6.0 |

Halogen Transformers

LED Drivers and Halogen Transformers

66952 –

Halogen Transformer

75W Electronic Transformer. 12V. Increased EMI Filtering.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | 94 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 10-75 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

66953 –

Halogen Transformer

75W Electronic Transformer. 12V. Increased EMI Filtering. Bottom Feed.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | 94 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 10-75 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

68662 –

Halogen Transformer

75W Electronic Transformer. 12V. Black.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 240 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | 94 |
| Output voltage (V) | 11.7 |
| Output Wattage Range (W) | 20-75 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 85 |

| Dimensions | |
|--|------|
| Wiring diagram – see example A on page 19-30 | |
| Casing length (in) | 2.52 |
| Casing width (in) | 1.34 |
| Casing height (in) | 0.83 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.22 |
| Lead Exit Type | Side |
| Input wire length (in) | 8.7 |
| Output wire length (in) | 8.7 |

| Dimensions | |
|--|--------|
| Wiring diagram – see example A on page 19-30 | |
| Casing length (in) | 3.48 |
| Casing width (in) | 1.44 |
| Casing height (in) | 1.15 |
| Mounting Dims (in) | 2.0 |
| Weight (lb) | 0.24 |
| Lead Exit Type | Bottom |
| Input wire length (in) | 6.3 |
| Output wire length (in) | 6.3 |

| Dimensions | |
|--|------|
| Wiring diagram – see example G on page 19-30 | |
| Casing length (in) | 2.52 |
| Casing width (in) | 1.34 |
| Casing height (in) | 0.83 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.22 |
| Lead Exit Type | Side |
| Input wire length (in) | 8.1 |
| Output wire length (in) | 7.7 |

Halogen Transformers

LED Drivers and Halogen Transformers

66954 –

Halogen Transformer

75W Electronic Transformer. 12V. 277V Input.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 277 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | - |
| Output voltage (V) | 11.5 |
| Output Wattage Range (W) | 35-75 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example H on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 2.52 |
| Casing width (in) | 1.34 |
| Casing height (in) | 0.83 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.25 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.1 |
| Output wire length (in) | 9.1 |

66955 –

Halogen Transformer

75W Electronic Transformer. 12V. 277V Input. Bottom Feed.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 277 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | - |
| Output voltage (V) | 11.5 |
| Output Wattage Range (W) | 35-75 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example H on page 19-30

| | |
|-------------------------|--------|
| Casing length (in) | 3.48 |
| Casing width (in) | 1.44 |
| Casing height (in) | 1.15 |
| Mounting Dims (in) | 2.0 |
| Weight (lb) | 0.26 |
| Lead Exit Type | Bottom |
| Input wire length (in) | 6.3 |
| Output wire length (in) | 6.3 |

66956 –

Halogen Transformer

105W Electronic Transformer. 12V.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | 94 |
| Output voltage (V) | 11.5 |
| Output Wattage Range (W) | 20-100 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example A on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 3.15 |
| Casing width (in) | 1.35 |
| Casing height (in) | 0.95 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.27 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.7 |
| Output wire length (in) | 7.3 |

Halogen Transformers

LED Drivers and Halogen Transformers

68663 –

Halogen Transformer

105W Electronic Transformer. 12V. 240V Input.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 240 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | 94 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-105 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 85 |

| Dimensions | |
|--|------|
| Wiring diagram – see example G on page 19-30 | |
| Casing length (in) | 3.15 |
| Casing width (in) | 1.25 |
| Casing height (in) | 1.04 |
| Mounting Dims (in) | 3.53 |
| Weight (lb) | 0.29 |
| Lead Exit Type | Side |
| Input wire length (in) | 6.7 |
| Output wire length (in) | 6.7 |

66957 –

Halogen Transformer

150W Electronic Transformer. 12V. Bottom Feed.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.98 |
| Efficiency (%) | 93 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 50-150 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 85 |

| Dimensions | |
|--|--------|
| Wiring diagram – see example A on page 19-30 | |
| Casing length (in) | 3.31 |
| Casing width (in) | 1.38 |
| Casing height (in) | 1.61 |
| Mounting Dims (in) | 4.13 |
| Weight (lb) | 0.42 |
| Lead Exit Type | Bottom |
| Input wire length (in) | 6.3 |
| Output wire length (in) | 6.3 |

66958 –

Halogen Transformer

150W Electronic Transformer. 12V.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.98 |
| Efficiency (%) | 93 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 50-150 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 85 |

| Dimensions | |
|--|------|
| Wiring diagram – see example A on page 19-30 | |
| Casing length (in) | 3.44 |
| Casing width (in) | 1.38 |
| Casing height (in) | 1.22 |
| Mounting Dims (in) | 3.62 |
| Weight (lb) | 0.42 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.1 |
| Output wire length (in) | 9.1 |

Halogen Transformers

LED Drivers and Halogen Transformers

66970 –

Halogen Transformer

150W Electronic Transformer. 24V.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.98 |
| Efficiency (%) | 93 |
| Output voltage (V) | 23 |
| Output Wattage Range (W) | 50-150 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 85 |

Dimensions

Wiring diagram – see example F on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 3.44 |
| Casing width (in) | 1.38 |
| Casing height (in) | 1.22 |
| Mounting Dims (in) | 3.62 |
| Weight (lb) | 0.42 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.1 |
| Output wire length (in) | 9.1 |

66969 –

Halogen Transformer

150W Electronic Transformer. 12V. In Secondary Housing.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.98 |
| Efficiency (%) | 93 |
| Output voltage (V) | 11.5 |
| Output Wattage Range (W) | 50-150 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 85 |

Dimensions

Wiring diagram – see example A on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 9.35 |
| Casing width (in) | 1.82 |
| Casing height (in) | 1.4 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.95 |
| Lead Exit Type | Side |
| Input wire length (in) | - |
| Output wire length (in) | - |

66972 –

Halogen Transformer

150W Electronic Transformer. 24V. In Secondary housing.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.98 |
| Efficiency (%) | 93 |
| Output voltage (V) | 23 |
| Output Wattage Range (W) | 50-150 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +40 |
| Case Temperature (°C) | 85 |

Dimensions

Wiring diagram – see example F on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 9.35 |
| Casing width (in) | 1.82 |
| Casing height (in) | 1.4 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.95 |
| Lead Exit Type | Side |
| Input wire length (in) | - |
| Output wire length (in) | - |

Halogen Transformers

LED Drivers and Halogen Transformers

68664 –

Halogen Transformer

150W Class 2 Electronic Transformer. 12V.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 240 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.95 |
| Efficiency (%) | - |
| Output voltage (V) | 11.5 |
| Output Wattage Range (W) | 50-150 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 10 to +45 |
| Case Temperature (°C) | 85 |

| Dimensions | |
|--|------|
| Wiring diagram – see example G on page 19-30 | |
| Casing length (in) | 4.25 |
| Casing width (in) | 1.26 |
| Casing height (in) | 1.14 |
| Mounting Dims (in) | 4.72 |
| Weight (lb) | 0.37 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.3 |
| Output wire length (in) | 7.3 |

66960 –

Halogen Transformer

200W Electronic Transformer. 12V. Increased EMI Filtering.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.98 |
| Efficiency (%) | 94 |
| Output voltage (V) | 11.5 |
| Output Wattage Range (W) | 50-200 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

| Dimensions | |
|--|------|
| Wiring diagram – see example A on page 19-30 | |
| Casing length (in) | 4.33 |
| Casing width (in) | 1.57 |
| Casing height (in) | 1.24 |
| Mounting Dims (in) | 4.61 |
| Weight (lb) | 0.66 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.1 |
| Output wire length (in) | 9.0 |

66973 –

Halogen Transformer

300W Electronic Transformer. 12V. Round.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 60 |
| Power Factor Correction | 0.99 |
| Efficiency (%) | 95.5 |
| Output voltage (V) | 11.8 |
| Output Wattage Range (W) | 50-300 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

| Dimensions | |
|--|------|
| Wiring diagram – see example A on page 19-30 | |
| Casing length (in) | 3.62 |
| Casing width (in) | - |
| Casing height (in) | 1.26 |
| Mounting Dims (in) | - |
| Weight (lb) | 1.03 |
| Lead Exit Type | Side |
| Input wire length (in) | 6.5 |
| Output wire length (in) | 6.5 |

Halogen Transformers

LED Drivers and Halogen Transformers

66975 –

Halogen Transformer

300W Electronic Transformer. 12V.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 60 |
| Power Factor Correction | 0.99 |
| Efficiency (%) | 95.5 |
| Output voltage (V) | 11.8 |
| Output Wattage Range (W) | 50-300 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example A on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 6.02 |
| Casing width (in) | 1.54 |
| Casing height (in) | 1.12 |
| Mounting Dims (in) | 5.51 |
| Weight (lb) | 0.74 |
| Lead Exit Type | Side |
| Input wire length (in) | 6.9 |
| Output wire length (in) | 6.9 |

66977 –

Halogen Transformer

300W Electronic Transformer. 24V.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 60 |
| Power Factor Correction | 0.99 |
| Efficiency (%) | 95.5 |
| Output voltage (V) | 24 |
| Output Wattage Range (W) | 50-300 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example F on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 6.02 |
| Casing width (in) | 1.54 |
| Casing height (in) | 1.12 |
| Mounting Dims (in) | 5.51 |
| Weight (lb) | 0.74 |
| Lead Exit Type | Side |
| Input wire length (in) | 6.9 |
| Output wire length (in) | 6.9 |

66979 –

Halogen Transformer

300W Electronic Transformer. 12V. In Secondary Housing.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 60 |
| Power Factor Correction | 0.99 |
| Efficiency (%) | 95.5 |
| Output voltage (V) | 11.8 |
| Output Wattage Range (W) | 50-300 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example A on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 9.35 |
| Casing width (in) | 1.82 |
| Casing height (in) | 1.4 |
| Mounting Dims (in) | - |
| Weight (lb) | 1.5 |
| Lead Exit Type | Side |
| Input wire length (in) | - |
| Output wire length (in) | - |

Halogen Transformers

LED Drivers and Halogen Transformers

66980 –

Halogen Transformer

300W Electronic Transformer. 24V. In Secondary Housing.

| General characteristics | |
|--------------------------|---------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 60 |
| Power Factor Correction | 0.99 |
| Efficiency (%) | 95.5 |
| Output voltage (V) | 24 |
| Output Wattage Range (W) | 50-300 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | 0 to +50 |
| Case Temperature (°C) | 90 |

66978 –

Halogen Transformer

360W Class 2 Electronic Transformer. 12V. 6 x 60W.

| General characteristics | |
|--------------------------|------------------------|
| Output Type | AC, Class 2 compliance |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | 0.96 |
| Efficiency (%) | 95 |
| Output voltage (V) | 11.6 |
| Output Wattage Range (W) | 20-360 |
| Dimmability | Trailing Edge |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

68665 –

Halogen Transformer

Line Filter. EMI Filter. In-line.

| General characteristics | |
|--------------------------|------------|
| Output Type | AC |
| Input voltage (V) | 120 |
| Input frequency (Hz) | 50-60 |
| Power Factor Correction | - |
| Efficiency (%) | - |
| Inductance (mH) | 15 |
| Output Wattage Range (W) | - |
| Dimmability | - |
| Ambient Temperature (°C) | -10 to +50 |
| Case Temperature (°C) | 90 |

| Dimensions | |
|--|------|
| Wiring diagram – see example F on page 19-30 | |
| Casing length (in) | 9.35 |
| Casing width (in) | 1.82 |
| Casing height (in) | 1.4 |
| Mounting Dims (in) | - |
| Weight (lb) | 1.5 |
| Lead Exit Type | Side |
| Input wire length (in) | - |
| Output wire length (in) | - |

| Dimensions | |
|--|------|
| Wiring diagram – see example I on page 19-30 | |
| Casing length (in) | 8.27 |
| Casing width (in) | 4.72 |
| Casing height (in) | 1.71 |
| Mounting Dims (in) | - |
| Weight (lb) | 2.43 |
| Lead Exit Type | Side |
| Input wire length (in) | - |
| Output wire length (in) | - |

| Dimensions | |
|--|------|
| Wiring diagram – see example J on page 19-30 | |
| Casing length (in) | 1.3 |
| Casing width (in) | 1.18 |
| Casing height (in) | 0.74 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.13 |
| Lead Exit Type | Side |
| Input wire length (in) | 2.2 |
| Output wire length (in) | 2.2 |

LED Drivers - Constant Current

LED Drivers and Halogen Transformers

66866 –

Constant Current, Class 2 Compliance

6W LED Driver. 700mA. Non-Dimming.

| General characteristics | |
|------------------------------|----------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 70 |
| Output Type | DC |
| Output Current (mA) | 700 |
| Output Voltage Range (V) | 2.0-11.0 |
| Output Wattage Range (W) | 1.4-7.7 |
| Dimmability | None |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 71 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 1.77 |
| Casing width (in) | 1.77 |
| Casing height (in) | 0.98 |
| Mounting Dims (in) | 2.05 |
| Weight (lb) | 0.25 |
| Lead Exit Type | Side |
| Input wire length (in) | 8.1 |
| Output wire length (in) | 8.1 |

66867 –

Constant Current, Class 2 Compliance

10W LED Driver. 350mA. Non-Dimming. Terminal Blocks.

| General characteristics | |
|------------------------------|----------|
| Input Voltage (V) | 100-240 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 78 |
| Output Type | DC |
| Output Current (mA) | 350 |
| Output Voltage Range (V) | 2.3-28.0 |
| Output Wattage Range (W) | 0.81-9.8 |
| Dimmability | None |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example B on page 19-30

| | |
|-------------------------|-----------|
| Casing length (in) | 3.94 |
| Casing width (in) | 1.57 |
| Casing height (in) | 1.05 |
| Mounting Dims (in) | 3.54x1.18 |
| Weight (lb) | 0.21 |
| Lead Exit Type | Terminals |
| Input wire length (in) | - |
| Output wire length (in) | - |

66868 –

Constant Current, Class 2 Compliance

10W LED Driver. 700mA. Non-Dimming.

| General characteristics | |
|------------------------------|-----------|
| Input Voltage (V) | 100-240 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 68 |
| Output Type | DC |
| Output Current (mA) | 700 |
| Output Voltage Range (V) | 2.3-15.0 |
| Output Wattage Range (W) | 1.61-10.5 |
| Dimmability | None |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|-----------|
| Casing length (in) | 3.82 |
| Casing width (in) | 1.57 |
| Casing height (in) | 0.91 |
| Mounting Dims (in) | 3.62x1.18 |
| Weight (lb) | 0.39 |
| Lead Exit Type | Side |
| Input wire length (in) | 19.1 |
| Output wire length (in) | 19.1 |

LED Drivers - Constant Current

LED Drivers and Halogen Transformers

66863 –

Constant Current, Class 2 Compliance

1W LED Driver. 350mA. Non-Dimming.

| General characteristics | |
|------------------------------|---------|
| Input Voltage (V) | 100-240 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 50 |
| Output Type | DC |
| Output Current (mA) | 350 |
| Output Voltage Range (V) | 2.0-6.0 |
| Output Wattage Range (W) | 0.7-2.1 |
| Dimmability | None |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |

66864 –

Constant Current, Class 2 Compliance

6W LED Driver. 350mA. Non-Dimming.

| General characteristics | |
|------------------------------|----------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 70 |
| Output Type | DC |
| Output Current (mA) | 350 |
| Output Voltage Range (V) | 2.0-20.0 |
| Output Wattage Range (W) | 0.7-7.0 |
| Dimmability | None |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 71 |

66865 –

Constant Current, Class 2 Compliance

6W LED Driver. 500mA. Non-Dimming.

| General characteristics | |
|------------------------------|----------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 70 |
| Output Type | DC |
| Output Current (mA) | 500 |
| Output Voltage Range (V) | 2.0-14.0 |
| Output Wattage Range (W) | 1.0-7.0 |
| Dimmability | None |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 71 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 1.34 |
| Casing width (in) | 1.26 |
| Casing height (in) | 0.98 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.14 |
| Lead Exit Type | Side |
| Input wire length (in) | 7.7 |
| Output wire length (in) | 7.7 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 1.77 |
| Casing width (in) | 1.77 |
| Casing height (in) | 0.98 |
| Mounting Dims (in) | 2.05 |
| Weight (lb) | 0.25 |
| Lead Exit Type | Side |
| Input wire length (in) | 8.1 |
| Output wire length (in) | 8.1 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 1.77 |
| Casing width (in) | 1.77 |
| Casing height (in) | 0.98 |
| Mounting Dims (in) | 2.05 |
| Weight (lb) | 0.25 |
| Lead Exit Type | Side |
| Input wire length (in) | 8.1 |
| Output wire length (in) | 8.1 |

LED Drivers - Constant Current

LED Drivers and Halogen Transformers

66870 –

Constant Current, Class 2 Compliance

10W LED Driver. 350mA. Non-Dimming. In Secondary Housing.

| General characteristics | |
|------------------------------|----------|
| Input Voltage (V) | 120 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 78 |
| Output Type | DC |
| Output Current (mA) | 350 |
| Output Voltage Range (V) | 2.3-28.0 |
| Output Wattage Range (W) | 0.81-9.8 |
| Dimmability | None |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |

66880 –

Constant Current, Class 2 Compliance

10W LED Driver. 350mA. Non-Dimming. Plug-In. White.

| General characteristics | |
|------------------------------|------------|
| Input Voltage (V) | 120 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 78 |
| Output Type | DC |
| Output Current (mA) | 350 |
| Output Voltage Range (V) | 2.3-2.9 |
| Output Wattage Range (W) | 0.81-10.15 |
| Dimmability | None |
| Ambient Temperature min (°C) | 10 |
| Ambient Temperature max (°C) | 35 |
| Case Temperature (°C) | 90 |

66871 –

Constant Current, Class 2 Compliance

18W LED Driver. 350mA. TE Dimming.

| General characteristics | |
|------------------------------|---------------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 85 |
| Output Type | DC |
| Output Current (mA) | 350 |
| Output Voltage Range (V) | 4.0-52.0 |
| Output Wattage Range (W) | 1.4-18.20 |
| Dimmability | Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 6.48 |
| Casing width (in) | 1.68 |
| Casing height (in) | 1.41 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.87 |
| Lead Exit Type | Side |
| Input wire length (in) | - |
| Output wire length (in) | - |

Dimensions

Wiring diagram – see example C on page 19-30

| | |
|-------------------------|---------|
| Casing length (in) | 3.15 |
| Casing width (in) | 1.50 |
| Casing height (in) | 0.95 |
| Mounting Dims (in) | - |
| Weight (lb) | 0.53 |
| Lead Exit Type | Plug-in |
| Input wire length (in) | - |
| Output wire length (in) | 120 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 6.02 |
| Casing width (in) | 1.57 |
| Casing height (in) | 1.20 |
| Mounting Dims (in) | 5.51 |
| Weight (lb) | 0.74 |
| Lead Exit Type | Side |
| Input wire length (in) | 8.46 |
| Output wire length (in) | 8.46 |

LED Drivers - Constant Current

LED Drivers and Halogen Transformers

66872 –

Constant Current, Class 2 Compliance

18W LED Driver. 350mA. TE Dimming. Bottom Feed.

| General characteristics | |
|------------------------------|---------------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 85 |
| Output Type | DC |
| Output Current (mA) | 350 |
| Output Voltage Range (V) | 4.0-52.0 |
| Output Wattage Range (W) | 1.4-18.2 |
| Dimmability | Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |

66883 –

Constant Current, Class 2 Compliance

18W LED Driver. 700mA. TE Dimming. Bottom Feed.

| General characteristics | |
|------------------------------|---------------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 83 |
| Output Type | DC |
| Output Current (mA) | 700 |
| Output Voltage Range (V) | 4.0-26.0 |
| Output Wattage Range (W) | 2.8-18.2 |
| Dimmability | Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |

66884 –

Constant Current, Class 2 Compliance

18W LED Driver. 700mA. TE Dimming.

| General characteristics | |
|------------------------------|---------------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 83 |
| Output Type | DC |
| Output Current (mA) | 700 |
| Output Voltage Range (V) | 4.0-26.0 |
| Output Wattage Range (W) | 2.8-18.2 |
| Dimmability | Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|--------|
| Casing length (in) | 5.33 |
| Casing width (in) | 1.67 |
| Casing height (in) | 1.32 |
| Mounting Dims (in) | 2.0 |
| Weight (lb) | 0.75 |
| Lead Exit Type | Bottom |
| Input wire length (in) | 6.0 |
| Output wire length (in) | 6.0 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|--------|
| Casing length (in) | 5.33 |
| Casing width (in) | 1.67 |
| Casing height (in) | 1.32 |
| Mounting Dims (in) | 2.0 |
| Weight (lb) | 0.75 |
| Lead Exit Type | Bottom |
| Input wire length (in) | 6.0 |
| Output wire length (in) | 6.0 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 6.02 |
| Casing width (in) | 1.57 |
| Casing height (in) | 1.20 |
| Mounting Dims (in) | 5.51 |
| Weight (lb) | 0.74 |
| Lead Exit Type | Side |
| Input wire length (in) | 8.46 |
| Output wire length (in) | 8.46 |

LED Drivers - Constant Current

LED Drivers and Halogen Transformers

66902 –

Constant Current, Class 2 Compliance

26W LED Driver. 500mA. TE Dimming.

| General characteristics | |
|------------------------------|---------------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 86 |
| Output Type | DC |
| Output Current (mA) | 500 |
| Output Voltage Range (V) | 4.0-52.0 |
| Output Wattage Range (W) | 2.0-26.0 |
| Dimmability | Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 6.02 |
| Casing width (in) | 1.57 |
| Casing height (in) | 1.20 |
| Mounting Dims (in) | 5.51 |
| Weight (lb) | 0.74 |
| Lead Exit Type | Side |
| Input wire length (in) | 8.46 |
| Output wire length (in) | 8.46 |

66903 –

Constant Current, Class 2 Compliance

26W LED Driver. 500mA. TE Dimming. Bottom Feed.

| General characteristics | |
|------------------------------|---------------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 86 |
| Output Type | DC |
| Output Current (mA) | 500 |
| Output Voltage Range (V) | 4.0-52.0 |
| Output Wattage Range (W) | 2.0-26.0 |
| Dimmability | Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|--------|
| Casing length (in) | 5.33 |
| Casing width (in) | 1.67 |
| Casing height (in) | 1.32 |
| Mounting Dims (in) | 2.0 |
| Weight (lb) | 0.75 |
| Lead Exit Type | Bottom |
| Input wire length (in) | 6.0 |
| Output wire length (in) | 6.0 |

66904 –

Constant Current, Class 2 Compliance

36W LED Driver. 700mA. TE Dimming.

| General characteristics | |
|------------------------------|---------------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 88 |
| Output Type | DC |
| Output Current (mA) | 700 |
| Output Voltage Range (V) | 4.0-52.0 |
| Output Wattage Range (W) | 2.8-36.4 |
| Dimmability | Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|------|
| Casing length (in) | 6.02 |
| Casing width (in) | 1.57 |
| Casing height (in) | 1.20 |
| Mounting Dims (in) | 5.51 |
| Weight (lb) | 0.74 |
| Lead Exit Type | Side |
| Input wire length (in) | 8.46 |
| Output wire length (in) | 8.46 |

LED Drivers - Constant Current

LED Drivers and Halogen Transformers

66905 –

Constant Current, Class 2 Compliance

36W LED Driver. 700mA. TE Dimming. Bottom Feed.

| General characteristics | |
|------------------------------|---------------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | 88 |
| Output Type | DC |
| Output Current (mA) | 700 |
| Output Voltage Range (V) | 4.0-52.0 |
| Output Wattage Range (W) | 2.8-36.4 |
| Dimmability | Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |

| Dimensions | |
|--|--------|
| Wiring diagram – see example K on page 19-30 | |
| Casing length (in) | 5.33 |
| Casing width (in) | 1.67 |
| Casing height (in) | 1.32 |
| Mounting Dims (in) | 2.0 |
| Weight (lb) | 0.75 |
| Lead Exit Type | Bottom |
| Input wire length (in) | 6.0 |
| Output wire length (in) | 6.0 |

66885 –

Constant Current, Class 2 Compliance

18W LED Driver. 350mA. LE/TE Dimming.

| General characteristics | |
|------------------------------|-----------------------|
| Input Voltage (V) | 120 |
| Input Frequency (Hz) | 60 |
| Efficiency (%) | 76 |
| Output Type | DC |
| Output Current (mA) | 350 |
| Output Voltage Range (V) | 5.6-42.0 |
| Output Wattage Range (W) | 1.96-14.7 |
| Dimmability | Leading/Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 80 |

| Dimensions | |
|--|-----------|
| Wiring diagram – see example K on page 19-30 | |
| Casing length (in) | 7.80 |
| Casing width (in) | 1.73 |
| Casing height (in) | 1.18 |
| Mounting Dims (in) | 7.48x1.34 |
| Weight (lb) | 0.75 |
| Lead Exit Type | Side |
| Input wire length (in) | 6.3 |
| Output wire length (in) | 10.6 |

66886 –

Constant Current, Class 2 Compliance

18W LED Driver. 350mA. LE/TE Dimming. Bottom Feed.

| General characteristics | |
|------------------------------|-----------------------|
| Input Voltage (V) | 120 |
| Input Frequency (Hz) | 60 |
| Efficiency (%) | 76 |
| Output Type | DC |
| Output Current (mA) | 350 |
| Output Voltage Range (V) | 5.6-42.0 |
| Output Wattage Range (W) | 1.96-14.7 |
| Dimmability | Leading/Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 80 |

| Dimensions | |
|--|--------|
| Wiring diagram – see example K on page 19-30 | |
| Casing length (in) | 7.40 |
| Casing width (in) | 1.73 |
| Casing height (in) | 1.22 |
| Mounting Dims (in) | 2.0 |
| Weight (lb) | 0.75 |
| Lead Exit Type | Bottom |
| Input wire length (in) | 7.1 |
| Output wire length (in) | 7.1 |

LED Drivers - Constant Current

LED Drivers and Halogen Transformers

66887 –

Constant Current, Class 2 Compliance

26W LED Driver. 500mA. LE/TE Dimming.

| General characteristics | |
|------------------------------|-----------------------|
| Input Voltage (V) | 120 |
| Input Frequency (Hz) | 60 |
| Efficiency (%) | 76 |
| Output Type | DC |
| Output Current (mA) | 500 |
| Output Voltage Range (V) | 5.6-42.0 |
| Output Wattage Range (W) | 2.8-21.0 |
| Dimmability | Leading/Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 80 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|-----------|
| Casing length (in) | 7.80 |
| Casing width (in) | 1.73 |
| Casing height (in) | 1.18 |
| Mounting Dims (in) | 7.48x1.34 |
| Weight (lb) | 0.75 |
| Lead Exit Type | Side |
| Input wire length (in) | 6.3 |
| Output wire length (in) | 10.6 |

66898 –

Constant Current, Class 2 Compliance

36W LED Driver. 700mA. LE/TE Dimming.

| General characteristics | |
|------------------------------|-----------------------|
| Input Voltage (V) | 120 |
| Input Frequency (Hz) | 60 |
| Efficiency (%) | 76 |
| Output Type | DC |
| Output Current (mA) | 700 |
| Output Voltage Range (V) | 5.6-42.0 |
| Output Wattage Range (W) | 3.92-29.4 |
| Dimmability | Leading/Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 80 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|-----------|
| Casing length (in) | 7.80 |
| Casing width (in) | 1.73 |
| Casing height (in) | 1.18 |
| Mounting Dims (in) | 7.48x1.34 |
| Weight (lb) | 0.75 |
| Lead Exit Type | Side |
| Input wire length (in) | 6.3 |
| Output wire length (in) | 10.6 |

66899 –

Constant Current, Class 2 Compliance

36W LED Driver. 700mA. LE/TE Dimming. Bottom Feed.

| General characteristics | |
|------------------------------|-----------------------|
| Input Voltage (V) | 120 |
| Input Frequency (Hz) | 60 |
| Efficiency (%) | 76 |
| Output Type | DC |
| Output Current (mA) | 700 |
| Output Voltage Range (V) | 5.6-42.0 |
| Output Wattage Range (W) | 3.92-29.4 |
| Dimmability | Leading/Trailing Edge |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 80 |

Dimensions

Wiring diagram – see example K on page 19-30

| | |
|-------------------------|--------|
| Casing length (in) | 7.40 |
| Casing width (in) | 1.73 |
| Casing height (in) | 1.22 |
| Mounting Dims (in) | 2.0 |
| Weight (lb) | 0.75 |
| Lead Exit Type | Bottom |
| Input wire length (in) | 7.1 |
| Output wire length (in) | 7.1 |

LED Drivers - Constant Current

LED Drivers and Halogen Transformers

93861 –

Constant Current, Class 2 Compliance

30W LED Selectable Driver. 700/1400 mA. 0-10V. Bottom Feed.

| General characteristics | |
|------------------------------|--------------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | >85 |
| Output Type | DC |
| Output Current (mA) | 700 and 1400 |
| Output Voltage Range (V) | 3-43 |
| Output Wattage Range (W) | 30 |
| Dimmability | 0-10V |
| Ambient Temperature min (°C) | -20 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 75 |

93862 –

Constant Current, Class 2 Compliance

30W LED Selectable Driver. 700/1400 mA. 0-10V.

| General characteristics | |
|------------------------------|--------------|
| Input Voltage (V) | 120-277 |
| Input Frequency (Hz) | 50-60 |
| Efficiency (%) | >85 |
| Output Type | DC |
| Output Current (mA) | 700 and 1400 |
| Output Voltage Range (V) | 3-43 |
| Output Wattage Range (W) | 30 |
| Dimmability | 0-10 |
| Ambient Temperature min (°C) | -20 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 75 |

| Dimensions | |
|---|--------|
| Wiring diagram – see example D on page 19-30 | |
| Casing length (in) | 3.74 |
| Casing width (in) | 1.75 |
| Casing height (in) | 1.18 |
| Mounting Dims (in) | |
| Weight (lb) | 0.65 |
| Lead Exit Type | Bottom |
| Input wire length (in) | 8.65 |
| Output wire length (in) | 8.65 |

| Dimensions | |
|---|------|
| Wiring diagram – see example D on page 19-30 | |
| Casing length (in) | 3.74 |
| Casing width (in) | 1.75 |
| Casing height (in) | 1.18 |
| Mounting Dims (in) | |
| Weight (lb) | 0.65 |
| Lead Exit Type | Side |
| Input wire length (in) | 8.65 |
| Output wire length (in) | 8.65 |

LED Drivers - Constant Voltage

LED Drivers and Halogen Transformers

66908 –

Constant Voltage, Class 2 Compliance

10W LED Driver. 12V. Non-Dimming. Terminal Blocks.

| General characteristics | |
|------------------------------|----------|
| Input voltage | 120-240 |
| Input frequency | 50-60 |
| Efficiency (%) | 79 |
| Output Type | DC |
| Output current (mA) | 830 |
| Output current range (mA) | 10-830 |
| Output voltage (V) | 12 |
| Output Wattage Range (W) | 1.0-11.0 |
| Ambient Temperature min (°C) | -25 |
| Ambient Temperature max (°C) | 50 |
| Case Temperature (°C) | 90 |
