CO1045 & CO1110
10x8 Combo Module RJ45 with RJ31X
10x8 Combo Module 110 IDC Punchdown with RJ31X

CONNECT VOICE & VIDEO YOUR WAY

Both the CO1045 and CO1110 distributes up to four lines of phone to 10 locations and 1 GHz digital video to eight locations from a cable company approved Antronix splitter. Like their namesake, the CO1045 terminates to RJ45 ports on the phone module while the CO1110 terminates to 110 Punchdown blocks.

Both modules are UL listed and include a RJ31X line seizure port for home security configuration. The Antronix video splitter exceeds the performance specifications of major cable service providers and its nickel plated housing provides excellent corrosion resistance in even challenging outdoor conditions.

The module ships with all needed corrosion-resistant infrastructure components. To enable easy access to any termination port during installation, the platform for the Antronix video splitter detaches from the telecom bracket. When finished, the attached platform holds tight into a compact form factor, maximizing available space in the enclosure for other components.

FEATURES

- Two connection options: RJ45 or 110 IDC Punchdown
- Voice and video distribution to 10 and eight locations, respectively
- Mounting infrastructure included
- Antronix digital video splitter exceeds cable company requirements
- UL listed
- Simple, convenient installation
