| Features               | One of the biggest challenges with enclosures located in hazardous areas is accessibility. To access internal components for preventative maintenance or troubleshooting, up to 70 bolts have to be loosened and then retightened, leading to extended periods of downtime and safety risks due to improperly torqued or missing bolts. The clamped EBMX enclosure utilizes patented clamping technology to reduce downtime, increase safety and lower maintenance costs. |
