Features	One of the biggest challenges with enclosures located in
	hazardous areas is accessibility. To access internal components
	for preventative maintenance or troubleshooting, up to 70 bolts
	have to be loosened and then retightened, leading to extended
	periods of downtime and safety risks due to improperly torqued
	or missing bolts. The clamped EBMX enclosure utilizes patentee
	clamping technology to reduce downtime, increase safety and
	lower maintenance costs.
