

HLF1 & HLF2

High-Lumen Flood LED Luminaires

The Solution You Need

The HLF high-lumen floodlights from Lithonia Lighting are the ideal LED solution for replacing 400W and 1000W metal halide floodlights by delivering what you need – a no-compromise solution that saves energy and lowers maintenance costs.

A No-Compromise Solution

With up to 64,000 lumens, the HLF high-lumen floodlight produces enough light to replace up to 1000W metal halide floodlights with ease. Combine this power with easy mounting options, such as our universal slipfitter or yoke mounts, and you can retrofit virtually any existing 1000W HID floodlight installation.

Energy Savings

The HLF provides typical energy savings of 54% when replacing 1000W metal halide without sacrificing light levels. Combine this with Acuity Controls ROAM® for site-wide dimming and monitoring—and the energy savings are even greater.

Lower Maintenance Costs

With a life expectancy of over 20 years, the HLF is designed to save money. Eliminating up to ten expensive metal halide lamp changes over the life of the product, maintenance costs are virtually eliminated. This is especially important at hard-to-reach mounting heights where lamp-replacement costs are inconvenient and expensive.

Quick Facts:

- Replaces 400W and 1000W metal halide floodlights
- Lumen packages ranging from 19,000 to 64,000
- Eight optics designed to meet unique application requirements, including a 7° optic
- Universal yoke and integral slip fitter mounting options for easy 1-for-1 retrofit
- Instant-on, avoiding long restrike times of traditional HID sources
