FEATURES AND SPECIFICATIONS

INTENDED USE

Specification grade emergency ballast to operate one or two lamps (4' or shorter) or one 8' lamp. Factory or field installed inside or outside (field only) fluorescent fixture to operate lamp(s) at a reduced light output, providing optimum glare-free illumination for a minimum of 90 minutes upon interruption of normal power.

CONSTRUCTION

- Black, 20-gauge steel, permanently-sealed housing. Housing provides extra room for wire routing in ballast channel.
- Dual-voltage input capability (120V or 277V)
- Polarized quick-connect pilot light/test switch assembly simplifies installation
- Patent pending integrated test switch pilot light that requires only one-hole drilling.
- U.S. Patent No. 6,522,147; 5,814,971; 6,577,136

PERFORMANCE

Operates one or two 2' – 4' fluorescent T8 – T12 lamps, one 2' – 4' fluorescent HO, VHO, long compact (biax) or one 6' – 8' fluorescent (T8 – T12) for 90 minutes. Compatible with electronic, rapid start, instant start, slimline, preheat or trigger start ballast in standard or energy-saving configurations. Unit wires two ways: on night light circuit (permanently energized) or on switchable circuit (unswitched circuit to battery pack and switched circuit to fixture ballast). Unit will strike normally off lamp.

BATTERY

Sealed, maintenance-free, high-temperature nickel-cadmium battery. Ensures long life over a wide range of temperatures. 24-hour battery recharge after 90-minute discharge. External battery connectors allows emergency ballast to be disabled for maintenance and installation. Pilot light and test switch provide visual and manual means of monitoring system operation.

ELECTRONIC

Constant-current series resistor-type charger. Capacitive input circuit provides high efficiency and reliable operation. High-efficiency push-pull inverter is the most effective method of converting DC power to AC power. It provides maximum light output, battery life and reliability.

INSTALLATION

Mounts concealed within fixture wireway for clean appearance and protection against vandalism; or mounts on outside of fixture housing if internal space is limited. Two 1/2" holes in fixture channel permit mounting of test switch/pilot light behind fixture lens. External mounting requires two accessory kits ELA PSMK or factory option MK. Kit adds 6" maximum to overall length. Unique size (13-5/16" L x 2-3/8" W x 1-5/8" H) fits a variety of fluorescent troffers, industrials, commercials and strips.

LISTING

UL listed. Damp location listed. Meets UL 924, NFPA 101 (current Life Safety Code), NEC and OSHA illumination standards. UL approved for installation in sealed and gasketed fixtures. UL approved for installation in wet and damp location listed fixtures, 0-50°C (32-122°F). (Note: DW option does not make the emergency ballast suitable for mounting outside the fixture in a wet location application.)

WARRANTY

Five-year warranty.

Fluorescent Battery Backup

PS1400DW

H - 1-5/8"
W - 2-3/8"
L - 13-5/16"

Accessories*

Order as separate item.

- ELA TSPLP Remote or replacement test switch pilot light; mounts up to 25' away from fixture
- ELA TSPLPSD Remote or replacement test switch pilot light for self-diagnostics; mounts up to 25' away from fixture
- ELA PSMK External mounting kit; two required
- ELA PSMKSD External mounting kit for self-diagnostics module
- ELA PSRME Remote mounting enclosure
- PSSD Field-installable self-diagnostics module
- ELA PSPRSB Field-installable interface for enhanced compatibility with lamp EOL protection ballast¹

ORDERING LOGIC

For shortest lead times, configure product using standard options (shown in *italics*).

NOTES

1. ELA PSPRSB accessory not required with self-diagnostics module.
